Thanks, guys. I found out that it is a Hy-Gain 18AVT, and Hy-Gain was
kind enough to fax me the entire manual today, without any problem.
Thanks to all who replied, and special thanks to those who offered /
mailed copies.

73s,

Doug, N6XQY

POP goes the Weasel. It's Christmas Time, Jerry. Remember how heartbroken you were last Christmas when your buddy Spew got all beat up ? That's why I'm trying my best to ignore you. I don't want to ruin your holiday season. I know you popped out from under your rock to see what Sandy Claws was going to bring you, so I am going to excuse you until after Christmas.

I won't be able to use anything on P3D, I took my antennas down. My satellite career is over. AMSAT reminds me of the NRA. Wanna buy some antennas and some satellite modems ? How about a Trakbox ? Wouldn't want you to miss the action on P3D......

Well, Squiggy, most of my radio's aren't THEORY, they are ICOM. ICOM is THE radio. I think what you meant to say is the only part of radio (ham) you know about is THEORY.

That's obvious. If you knew code, you'd have upgraded years ago.

And you keep throwing up the ridiculous 'We need gadzillions of new
hams if we want to keep the ham bands'. And then you tell us you want
to make the tests 'more meaningful', which contradicts your recruiting
statements. Face it Squiggie, we already figured out the only thing you
find meaningful is figuring out how to con your way onto HF with taking
a test.......

Squggie, Squiggie, Squiggie. You just can't see the forest for the trees,
can you. Us yakers and gamers have not taken over anything, we've owned
it all along. And I must say we have done an outstanding job of keeping you
out of the game. Twenty plus years you've been licensed, and twenty plus
years HF has survived just fine without you, not to mention the sixty plus years
we have survived without your Grandpa. If anybody is coming to take anything
away, it's the men in the white coats coming to take you away Squiggie......

Reason Number 469 for No Code HF:

Ham Radio is going to hell in a handcart, but look - up in the sky - it's a bird
- it's a plane - NO ! It's SUPER TECH SQUIGGIE, here to save the day !!!!!

Just give him a nocode HF ticket and a microphone, and he'll get on 20 meters
and save Ham Radio !!!

Only one thing good about you Squiggie, you're always good for a laugh.

3643. Computer Power Supply for 12v mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-14 00:00:00 UTC
From: adkinsg@piranha.ianet.net
Message-ID: <58vtc4$tnb@piranha.ianet.net>
Source record: 210167
Cross-posted to: rec.radio.cb,rec.radio.amateur.misc,rec.radio.amateur.homebrew

Hi.

I have an older 286 computer that doesn't work anymore. It's
a non-standard case, so I can't put a new motherboard in it.

Since the power supply puts out many amps at 12v on this
particular one... Could I use it to power a mobile radio?

I realize I would have to apply the "power-good" signal (either
ground it or raise it, don't remember which) to get the supply
to work.. (at least that's how I remember it working, haven't
played with computer power supply in a while)

Would it be stable with no load on the 5v side? Could I hook a
big transistor to the 5v size (to ground) to let it see a little
load?

If anyone has done this, I'd appreciate any pointers!

Thanks,
Garry

3644. Mount suggestions needed

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-14 00:00:00 UTC
From: kd1hz@anomaly.ideamation.com
Message-ID: <58vv84$9in@anomaly.ideamation.com>
Source record: 210168

Well, I just traded in my old Explorer for a new Expedition.
Now, however, I need suggestions on a mount for my HF antenna.
Before I merely had a SS ball mount on the side of the truck.
However, I can't bring myself to drill a hole in this new toy.

Does anyone have a recommendation for a hamstick mount, as in
a bumper mount?

Still need a couple of folks to help me debug a ham radio web page prior to making it public.

If you can help, please tell me what your system is and what browser you are using. I need someone with Netscape and someone with Explorer. In either case you need to be running a 32 bit os ie win95, win nt, etc.

I appreciate any time you can lend.

>like spread spectrum, better modulation techniques, error correction
>coding schemes, and other things ... we need quite a few other changes
>in addition to the removal of the code test ...
>
>However, there are a lot of things going on ... there are two STAs
>allowing SS testing ... it's ridiculous that the use of SS is limited to
>STAs, though ... hell, I'm building comsumer products with 900MHz spread
>spectrum systems in them at work ...

Carl, you say you have no commercial interest in amateur radio, yet you inform everyone in the newsgroup of what you're working on and what needs to be done. You should be more careful. People tend to call things as they see them.

>We need to "Elmer" them and "show them the way" ... unfortunately, there
>are too many "yackers and gamers" and they are perverting ham radio into
>what they want it to be and what it's *supposed* to be is falling by the
>wayside ... that HAS to stop, or we will lose the bands ... NO WAY will
>the FCC continue to allow us to control billions of dollars worth of
>spectrum if they realize that all we're doing is playing games ...

Could you be a bit more specific as to what you mean by "yackers and gamers?" I became a ham because it was fun, now you're saying that by my having fun in my chosen hobby, I'm wasting billions of dollars of spectrum. It's really too bad that so many people see things only in terms of dollar signs nowadays.

>Newsline last night; The Guyanan goverment has kicked It's amatuers off
> 70 cm.

I heard it was Guatemala. Probably 10 hams in the whole country use the
band. Not enough political pressure from such a small group.

I was under the impression that there is a satellite sub-band in the
430-440 that is a world wide allocation. How did they get around that?

Notes
=====

The distances were calculated using the International Ellipsoid of 1924 (polar radius 6356.912 km, equatorial radius 6378.388 km). Details of the calculation method are available on request.

Propagation modes are those reported by the stations concerned. However, it can sometimes be very difficult to distinguish between propagation modes. This is especially so on 50 MHz, where mixed-mode QSOs are common, and to a lesser extent it applies on 144 MHz. The propagation information should be read with this in mind.

Station positions were taken from the best available information, in the following order of preference:

1. Exact latitude and longitude where known
2. Locator sub-square center if given
3. Approximate latitude and longitude from geographical location.
4. Distance as claimed by the QSO participants.

Calculated distances may change if better information on station location becomes available.

If you have any information on a possible record or exceptionally long distance QSO please send it to the IARU Region 1 VHF/UHF/Microwave DX record co-ordinator:

John Morris, GM4ANB,
35 Main Street, Hillend, By Dunfermline, Fife, KY11 5ND, UK.

Or via packet: GM4ANB@GB7EDN.#77.GBR.EU
Or via e-mail: john@kirsta.demon.co.uk

An on-line copy of the latest version of the table is at:

Carl should find a new hobby like golf. But then he would want the golf balls to be made larger. Those little golfballs are obsolete and it is unfair that he should have to learn how
to hit those little golfballs.

This no code issue has turned into a joke.....Leave it all alone. I see nothing but problems
ahead by changing the code requirements or license. All the tests up through Extra are already too easy. What good would come from a no code general? More hams, more over crowded HF bands. The no code thing is about selling radios and advertising. With the no code tech license they are selling thousands of uhf vhf radios. With a no code general they will be selling many hf rigs. QST and 73 magazine will be selling more advertising.

My opinion,
Don W6IQ

>
>Bill W0IYH

The bulk of the energy in a lightning surge is below 2 MHz. While there
are components all the way up into UHF, most of the energy is concentrated
at low frequencies. This makes trying to stop it with ferrite beads more
than slightly problematic. And the problem with coax becomes aggravated
by decoupling the outside of the braid. The inner conductor then becomes
a lower impedance path for the surge than the outer, and the differential
voltage between inner and outer becomes much larger. This is almost certain
to arc the insulation and ruin the coax. It may do more than that.

I'd note that there is a differential mode voltage problem anyway
for a long coax run. The velocity factor *inside* the coax is different
from the velocity factor on the *outside* of the coax, so at certain
lengths large differential voltages can exist. The length of run needed
for maximum differential voltage varies with the dielectric constant
of the insulation. With airline, there is virtually no effect. But with
foam insulation the effect is quite pronounced.

It is a good practice to have a coax suppressor at the tower base
to snub differential mode voltages as much as possible before the
coax heads on over to the entrance bulkhead at the shack. This also
has the added benefit of shorting the single turn transformer formed
by the coax and the tower.

>The first Ten Ammendments to the Constitution awarded certain Rights
>to certain citizens. It did not discover existing inherent rights
>ones but it created new ones with the force of law. Do you argue
>that the Bill of Rights should be renamed the Bill of Privileges?

When the debates over the adoption of a Bill of Rights occurred,
this point was raised. The concern was expressed that people might
make the mistake you are making. Madison replied in essence that
people couldn't be so stupid as to not realize that the Bill of
Rights were *a limitation on government's power* to usurp certain
inherent human rights so important that they warranted enumeration.
But he did agree to include Amendment 9 to make doubly sure no

one would make the mistake you are making (and that other Statists have made in modern times).

Since Madison (with Jefferson's encouragement and coaching) was the author of the Bill of Rights, I suspect we can take from his statement that they were not intended to be a list of privileges granted by the government to the people. Rather they are a set of enumerated prohibitions *on* the government, limiting its power to infringe an enumerated subset of the people's inherent rights.

Here's what Prof Milton Konvitz, author of _Bill of Rights Reader_, and law professor at Cornell has to say.

"The Bill of Rights is a document that describes the fundamental liberties of the people. It also forbids the government to violate these rights."

Note that he says that the BOR *describes* fundamental liberties. It does not *create* them. It *forbids* government infringement of them.

"Man is considered to have rights that are inborn. A government may not deprive him of these rights. It has only limited powers delegated by the people."

Note that it is *the government* which has limited powers, granted by *the people* from which all legitimate rights and powers flow.

"Many of these ideas were developed in the Bible, and in ancient Greek and Roman civilizations. In modern history such men as John Locke, John Milton, and John Stuart Mill of Great Britain, and Thomas Jefferson, James Madison, and Thomas Paine of the United States fought for the acceptance of these views."

If you *read* the Bill of Rights, these things become quite clear. Amendment 1 says "Congress shall make no law..", Amendment 2 says, "..the right of the people to keep and bear arms shall not be infringed." Amendment 3 says, "No soldier.. shall be quartered..", Amendment 4 says, "The right of the people... shall not be violated..", Amendment 5 says, "No person shall be held to..", etc. In all cases, the Bill of Rights is a limitation on government power. It says *NO* to *government* again and again. And in particular read Amendment 9 in full,

"The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."

This is about as plain as it can be. Rights are not something granted by government. They are inherent properties of the human condition. The Bill of Rights *reinforces* some of these rights in particular by placing prohibitions on government's power to infringe them, and also acknowledges that the enumeration is not an exhaustive one.

Nodern day Statists, Liberals, Socialists, and Communists have attempted to *corrupt* the meaning of the word "rights". They have even gotten some dictionaries to go along with them. But in the context of the people and the government, the Constitution reigns supreme over Webster's dictionary, and its authors were explicit that rights are an inherent property of the people, not something granted by governments.

Government is the embodiment of raw naked power. It is a dangerous servant and a fearful master. The Constitution was written to keep it in check, to limit its power and its scope as much as possible while still allowing it to act as servant in essential matters. Too many have forgotten the words of Jefferson.

"Still one thing more, fellow citizens, a wise and frugal government, which shall restrain men from injuring one another, which shall leave them otherwise free to regulate their own pursuits of industry and improvement, and shall not take from the mouth of labor the bread it has earned, this is the sum of good government."

In that statement from Jefferson's innaugral address is the sum total reason for legitimate goverment regulation, and that is to "restrain men from injuring one another".

Indeed they are, and they should be steered to the appropriate radio
service. They do not belong in a radio service intended for private
technical investigations (as the ITU definition of amateur radio says
amateur radio is to be).

>Why should they have to learn all that 'technical' stuff when all they

But of course they do, every time they press the PTT. They are ignorant
of the fact, but ignorance is no excuse before the law. Amateurs are
expected to know how a radio works. That's why they aren't limited to
Type Accepted equipment, as mere radio *users* in other radio services
are. Unless you want amateur radio to actually *become* a glorified
CB service with no user accessable parts and Type Accepted equipment,
you wouldn't make such an argument.

>> ...<Much more snipped>

>hard..."), do you think dumbing down the requirements is going to make
>things better?

No, dumbing down isn't the goal, stripping elements from the tests which
do represent a dumbing down is the goal. Do you consider rote conditioning
of reflexive response to an alphabetic encoding anything other than a
dumbing down to the level of a Pavlovian conditioned animal? Certainly
no higher intellectual functions are employed. It is just conditioned
response. That is the ultimate in dumbing down. And the more you do
it, the dumber it becomes, IE the less thinking it requires. At 20+
WPM the stupid-o-meter becomes pegged, at least according to those
who claim that they no longer hear the alphabetic encoding but claim
to hear English words instead. To actually encourage, much less require,
such hallucinogenic mental states should be a crime akin to pushing
LSD rather than something forced on a presumably rational individual
by government regulation.

>I'm all for minimisation of government interference. However, I have a
>hard time with the idea of removing elements of the tests. Mark my
>words, once the code requirement is gone, the next thing will be the
>remaining technical elements ("...why should I have to learn this? It's
>hard and I'll never use it...").

Ah, the Domino theory. Didn't wash with communism, doesn't wash now.

>I believe the tests are too easy. They should be made more difficult
>AND keep the Morse requirement. Before you say, "it's OK for you, you
>have your license", check on Deja News and check my call sign below on
>the various databases, you'll see that I held that opinion before I
>wrote my tests. I mention this just to stem any cries of "hypocrite".

I also believe the tests are too easy. In particular too much emphasis
is placed on rote conditioning and not enough on actual thinking. We
should eliminate as much rote conditioning and memorization as we
possibly can from the exams and structure them to require clear and
concise thinking about the relevant aspects of the technology of radio,
and our responsibility to exercise that technology without causing
harm to others. The legitimate purpose of government regulation is
to "prevent men from injuring one another". In a technological
activity, ignorance of the technology can allow inadvertent harm
to occur in several ways.

If an amateur is so ignorant of radio theory that he cannot recognize
splatter, and what to do about it, or overdeviation, and what to do
about it, or spurious radiations, and what to do about them, or harmonic
radiations, and what to do about them, or excess RF exposures, and what
to do about them, then he is a menace to the airwaves and the public,
and doesn't deserve to be an amateur.

Instead he should be given a low power Type Accepted little box with
no user accessable controls but an on-off switch and conditioned to
beep the equivalent of "10-4 Good Buddy", IE "UR RST 599 PSE RPT ..."

in Morse at faster and faster speeds until he expires from the tedium
and banality of it all.

CB exam?

The FCC eliminated the "send us $20 and get a station license" requirement
in the 70s but there was never an *exam* for a CB license, certainly not a
theory exam. It has always been a radio *user* service.

The one you're supposed to have a current copy of in your station
records. It's called Part 97, and the Basis and Purpose is section
97.1. Might be interesting to read it some time.

AMRAD had a HF STA for SS several years ago. The tests were successful.
The military has used SS on HF for decades, very successfully. There is
no technical justification for continuing an endless round of STAs for
this methodology. It is past time to simply give it blanket authorization.
IMHO the reason that hasn't happened is primarily because of the fear
and loathing new ideas generate among a segment of the amateur population.
They have protested vigorously anything that they don't understand.
This was all too apparent in the filings for the current STA. The
ignorance and fear shown by some of those who should know better
was a shocking display.

Now which skill is more useful? The self-training an amateur is supposed to undergo is not intended to just serve as busy work, nor is it a race. It is supposed to serve a public purpose. That purpose is to provide a reserve pool of "trained operators, technicians, and electronic experts." We might well ask "for whom?", and the answer has traditionally been military and civil government communications needs in times of emergency. But guess what, they don't use Morse anymore, so Morse conditioning doesn't meet the public purpose. Technical skills in modern communications techniques do. And those skills cross over into other fields besides just radio which are also useful to the public purpose, IE the wired telecommunications network for example. The same can't be said for Morse any longer.

The skills you acquired learning to do better than Morse carry over into the other digital realms. If needed, you could apply them to restore a SLIC to operation, or get your public safety SMR system back online in an emergency where the regular service personnel are either unavailable or overwhelmed. Or just contribute to the general public good by being able to help your neighbors understand their new digital appliances, or fix that Chrysler serial bus which has stalled their car in front of your driveway. Morse conditioning is worthless for any of that. It doesn't matter if it took you six months or six years to acquire it if the skill isn't useful to the public purpose for which amateurs are supposed to self-train. Sure, you can use it to work Dee-X, but that sort of gaming doesn't serve the public good, and arguably all too often falls into the skipshooting "10-4 Good Buddy" class of public harms.

Perhaps you've been living under a rock. S25.5 is on the table
for WRC99. Preparatory working groups will define national positions
during 97 (WRC procedure requires circulation of working positions
among member nations two years prior to a conference). That's why
there is all this political positioning going on now.

That last sentence is a non sequitor. It does not follow from the
statements above it.

>CW is out-dated is another argument. Commercial interests are phasing
>out the use of Morse code so it is out-dated. Commercial interests
>still use AM in a big way, so perhaps we should scrap the high priced
>SSB riceboxes and dig out those old DX-40s etc. Bad idea, lets build
>new AM gear using SMT and MMICs. Why does it matter what the
>commercial interests are using unless the hobby becomes
>professional-amateur radio?

It matters because one of our purposes is to supply a pool of
"trained operators, technicians, and electronics experts." For
whom? Those folks who no longer use Morse. The military, civil
government, and yes, commercial interests. So the Morse requirement
no longer serves the public purpose of supplying, at no cost to the
taxpayer, a useful form of vocational education.

>I have said before that it doesn't sound right that a ham should be

>suprised when several extremely knowledgeable people said that FSK
>could be used instead of CW. I have a Tuna-Tin 2 transmitter and I
>would like to know how a simple Pierce oscillator that functions as a
>CW transmitter can be used for FSK without any modifications to make
>it more complex. What am I missing?

You're missing the fact that by adding that varactor we can eliminate
the code key, and the painfully conditioned reflexes required to drive
it. Subtracting a few million conditioned neurons from the circuit does
tend to simplify it a great deal, even if we add back a few thousand
VLSI transistors, and lowers the man-hour cost of getting it operational
substantially as well. Plus, it can then work at levels where OOK Morse
can't even be detected by ear.

>Amateur radio does indeed to seem to be "dumbing down". In the
>newsgroups many tech questions are asked that have simple answers.
>Many of these questions are asked by hams whose callsigns indicate
>they are new licensees and some who hold advanced and higher class

>greatly out-number the "Where can I find out how to..." questions.
>Additionally of the active no-code proponents only Gary and Cecil seem
>to be the ones providing tech support (sorry if I missed a few of the
>others but your efforts are most appreciated by all). Most of the
>other no-coders seem to spend all their ng time debating and name
>calling.

But it should be noted that those higher class licensees asking
for help passed a Morse receiving test. The test didn't make them
more knowledgeable, or instill in them a desire to open the reference
books, or understand what they might read there. In fact, it seems
obvious to me that it took time away from gaining an understanding
of the technical side of radio which they could ill afford.

>Morse code is as basic to amateur radio as knowing the Windows API is

>command line compiler, the needed header files, and a text editor,
>write a Windows app. "Uh, can't do it, don't know how." Here is a
>basic transmitter (Pierce oscillator) and a regen or DC receiver,
>communicate. "Uh, can't do it, don't know how." If you can do it high
>tech but can't do it with the basics, "what kind of guru are you
>anyhow?" (F.Zappa)

Well you see, there are those of us who won't bother with kludges
like Windows. We prefer to do our programming under a real operating
system, not a buggy GUI with delusions of grandeur. We're amateurs
you see, we aren't in it for the money, so we don't have to prostitute
ourselves. But if we must get down to basics, then we'll do assembly
on the bare iron. That does offer the highest performance, even if it
does take a better knowledge of the underlying hardware than poking
around in Windoze. Your Pierce oscillator and regen receiver are like
resurrecting a TRS-80 Mod I and programming it in Basic to do signal
processing when what you really need is an embedded DSP programmed in
assembler. Performance is very low.

>What happens to the band plans if a no-code HF ticket becomes
>available? As it stands now 43% of the US amateur's HF spectrum is
>dedicated to CW, RTTY and data. Will it remain this way or will that
>percentage shrink? What about a no-code HF ticket that allows the
>no-coders to use that 43% (or at least the general/advanced class
>portions)? AMTOR, PACTOR, CLOVER and all the new digital modes that
>will allegedly appear fit in nicely. That would fly fine by me and

>should make the technological no-code gurus happy as well unless ALL
>THEY REALLY WANT IS HF PHONE PRIVILEGES.

That's Ok too. They'll have to adopt better techniques if they want
to do phone effectively. That'll bring pressure to make SS and digital
voice available on HF just as the growth in the 50s forced a shift from
AM to SSB. That's good. And once those techniques are established, those
of us who want to push pure data at higher rates on HF will be able to do
that too (bits are bits).

>Amateur radio is a hobby but no longer is it a major technological
>resource. Engineers have big toy boxes in their commercial R&D labs
>that most amateurs will never be able to afford. Amateur radio is in
>its twilight and the code requirement has nothing to do with it.

I disagree most strongly. The coming advances in radio communications
will be primarily software driven. In the next few years, the only
thing analog in a radio will be the RF front end. Everything else
will be digitally processed. And software is the ultimate cottage
industry. All you need is a computer, an inquiring mind, and the
time and patience to program and debug that new algorithm. The
latter two things are in extremely short supply in industry, but
amateurs have them in virtually unlimited amounts.

December 13, 1996
The ARRL Letter Online

MULTIPLE CLUB STATION CALL SIGNS ALL LEGAL

The assignment of multiple club station call signs to the same clubs--some of which may exist only on paper--is perfectly legal according to a staff member in the FCC's Private Wireless Division. However, the practice--which has become more prevalent and obvious during the issuance of Gate 2 vanity call signs in November--has raised the hackles of some hams. A California ham wrote the ARRL expressing his concern that the multiple applications were "clearly in violation of the spirit" of the vanity call sign program, and a New York ham asserted that "club calls should be for real clubs, not imaginary ones." Both hams decried the issuance of 23 club station callsigns issued to members of one family in California.

Due to the tremendous amount of e-mail on this topic, I am pleased to provide further examples of amateur related definitions.

DISCLAIMER

these definitions represent my personal opinion of those they resemble. Any similarity between actual amateurs living or dead, OR dead and too stupid to realize it is purely on purpose. IN OTHER WORDS..if the shoe fits....

Narcissism noun self-love, excessive interest in one's own appearance, comfort, importance, abilities, etc. EXAMPLE: I have the following technological marvels in my house/apartment/sailboat

meglomania noun a mental disorder characterized by delusions of grandeur, wealth and power. see Buckmaster database under WA6VSE

well that covers tonights topic

10 meter contest went fairly well. 17000+ points for 6 hours fun. Some interesting opening directly to LU land and the W6 area.

2 new states and 1 new country. Lat at night ragchewed alot. Actually qso'd with someone in Midwest who knows Carl personally. Actually works with him. Not what you would call a flattering recommendation for someone who's so technological advanced as my pal and friend .

73, keep dx'ing, contesting, ragchewing. Just remember, the only reason the ARS ever developed this great techotoys was just so that someone could talk farther and to more people longer

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1009 for release on Friday, December 13, 1996 to follow.

(*****
The following is a QST

Cosmonauts walk in space to fix a ham radio antenna. Also, the Amsat Oscar 13 Satellite falls from the sky, and a special report on the St. Lucia DXpedition. All this and more on a special extended Newsline report number 1009 coming your way right now.

(*****
MIR ANTENNA BROKEN

A special space walk to repair a broken Amateur Radio antenna on the Russian Mir Space Station may herald a new era in international ham radio cooperation.

Here's the message, as received:

To ::ALL
>From ::R0MIR
We finished our second space walk. After the first one we had a problem with our antenna. Tonight we repaired it and now it's Ok. We back your pardon for such an occasion.
73 de Mir crew"

Mir is back on 2 meters, and it's a remarkable example of the importance of amateur radio in the Russian Space Program. They conducted a space walk to repair the ham radio antenna. The Russians consider their amateur station as an essential element of communication aboard the MIR.

This is a prelude to what we can expect in the next few years. Manned space flight programs today fly on American Space Shuttles and Russia's MIR Space Station, but they will come together in the International Space Station that will be assembled in orbit in the next few years. That station will provide a permanent presence in orbit for at least 8 participating nations and amateur radio representatives from those nations have formed ARISS, an acronym for Amateur Radio International Space Station, to build and operate a super ISS ham station.

There are several organizations. SAREX, the Shuttle Amateur Radio Experiment, handles the Space Shuttle Missions. MAREX, the Mir Amateur Radio Experiment, is in charge of MIR amateur radio operations. Germany's SAFEX, provides MAREX equipment and technical assistance. And, here in the United States, MIREX, or Mir International Radio EXperiment, has been formed and accepted by the Russians, the Germans and SAREX as a point of contact for MIR school contacts and experiments. The member organizations are preparing a release that will cover all of this in greater detail.

A major dedication of manned space flight by all nations is contacts with students in schools. Now that Mir is back on the air, the way is open for such contacts. John Blaha, a U.S. Astronaut, is with the two cosmonauts in space and recently was granted permission by the FCC to conduct third party traffic, meaning he can talk to students or friends through U.S. licensed and controlled stations.

Miles Mann, WF1F, speaking for Mirex, has said that "Applications for U.S. school MIR QSOs are approved by MIREX and SAREX before going to MAREX and SAFEX. The Mir crews have busy work schedules but our guidelines allow us to arrange, months in advance, school QSOs during crew off hours. The cosmonaut amateur radio department gives final approval for all QSOs and reserves the right to cancel at any time.

SAREX works with the International Space Station Office to clear schedules for John Blaha.

The good news, that Mir is now back on the air, means that some school contacts can be made. In the near future, SAREX and Mirex hope to schedule 4 to 6 Mir school contacts a month.

AO-13 FALLS FROM ORBIT

The AMSAT OSCAR 13 ham satellite has fallen from orbit. As reported a few weeks ago, OSCAR 13 went silent in late November when its solar panels suffered severe heat damage. The satellite finally succumb to the forces of nature on Thursday, December 5th when it de-orbited and burned up on re-entering the Earth's atmosphere.

By way of background, AMSAT OSCAR-13, one of the most successful ham radio satellites ever to achieve orbit. It was launched on June 15th, 1988, into a highly elliptical orbit on board the first test flight of the new European Ariane 4 rocket. Over its eight years in space, AMSAT OSCAR-13 had the ability to permit direct radio contacts among the world-wide community of radio amateurs.

Its orbital decay was caused by the gravitational attraction of the Sun and the Moon. The elliptical orbit was stretched so that the satellite gradually approached the Earth which lies at one of the two focal points of the ellipse. This phenomenon motivated AMSAT to develop new analytical and computational methods to allow long term predictions for future satellites on similar, highly elliptical orbits. As a result, the orbit of the next satellite, AMSAT Phase 3D, has been calculated using these new methods and should be more stable over the long term.

Phase 3D is scheduled to be launched into space during the first half of 1997. As of this report it apparently the only satellite payload for the second test flight of the new European built ARIANE 5 launcher.

VT SECTION MANAGER RECALL ELECTION

Amateurs in Vermont have become embroiled in a bitter dialogue that has culminated in a recall election to try and oust ARRL Section Manager, Justin Barton, WA1ITZ. Barton, of Randolph, Vermont, was re-elected to the post in May. This, after defeating challenger Ronni Stern, KA1NRR, in a lopsided 234 to 105 victory.

Barton had originally won election two years earlier by defeating Stern's husband, Mitch, W1SJ, by a vote of 213 to 139 votes. Previously, Mitch Stern had served two terms as Vermont Section Manager.

The recall petition was submitted on October 11th by Raymond Belair, N1UPK, of Westford, Vermont charging voting irregularities. It claimed an unusually high turnout of Vermont section members and questioned the validity of the voting process.

Also in his recall petition filing, Belair asked that the names of those signing it not be made public. This condition was deemed as not acceptable and was later retracted in an October 28th letter to the League.

On November 22, David Sumner, K1ZZ, acting in his capacity as ARRL Secretary, wrote that after reviewing the matter, the Election Committee

has determined that the petition should be accepted. Recall ballots were mailed out first class on December 2nd. They will be counted on Tuesday, January 7th. The League says that measures will be taken, while preserving the secrecy of the ballot, to ensure that no member casts more than one vote.

NORTHEAST SNOW STORM

Amateur radio operators throughout the Northeast are being credited with being at the right place at the right time when a major snow storm hit the area. According to news and wire service reports, hams were quick to respond when electricity and telephone service was cut in several areas of Massachusetts and parts of Connecticut. No names of individual hams were given, but the service itself got some positive public exposure because New England hams were ready to go when the "the big one" moved in.

(Newsline via various sources)

(*****

CALIFORNIA WILDFIRES

Last falls' California wildfires tested the emergency communications capabilities of ham radio operators in northern San Diego County. This, as Northern District ARES members responded to a brush fire in the Harmony Grove area of Carlsbad on the afternoon of October 21st.

Frank Littlebury, KE6WOE is the Northern District assistant emergency coordinator in the San Diego Section. He reports that over the next 40 hours, ARES personnel backed up by other volunteers stood by to support four separate Red Cross shelter and evacuation centers. They were also ready to provide supplementary communication support to the Red Cross, local fire departments, sheriff's office and county and city emergency operation centers in Northern San Diego County.

COLLINS CALL SIGN

A famous call sign has returned to the airwaves as part of the vanity call reassignment program underway with the FCC.

The Collins-Rockwell factory club station at Cedar Rapids, IA, now has the late founders callsign, W0CXX. Before he passed away, Art Collins was living in Dallas, TX. His license was to have expired a year ago this month. But the Collins Group, with the blessing of his widow, Mary Collins saw to it the a vital piece of ham radio heritage was preserved. Helping bring the call letters back to life in recent days the Collins Collector Association who hosted on the air visits with the new W0CXX.

"Anybody else want to check into the Collins Collector Association informal get together and make contact with the special events station W0CXX in Cedar Rapids, please come now with your callsign."

Yes there was a pile-up as more than three dozen stations lined up early with CCA net control W8RO.

"I'm sorry, there are people doubling and tripling. Just stand by just and let me. Stand by for just a second and we will get everybody in here."

Finally there was forum and decorum as the Art Collins Special Event Station began working the list. For many it was a thrill as club operator and Rockwell worker Tom Vintin gave out reports.

"Whiskey Foxtrot Zero Juliet in Tampa, FL and our 559 over."

Quite a treat and the band conditions cooperated on 75 meters so that Cedar Rapids could work coast to coast. The special event brought many people out of the wood work to reflect on their favorite Collins equipment, express the fine quality Art Collins brought to such gear and to take a nostalgic look back at what has become a collectors market for just about all models produced at Cedar Rapids in the years that have past.

Thanks to the Collins-Rockwell Amateur Radio Club, Art Collins call, W0CXX will live on.

W1AW SCHEDULE CHANGE

The ARRL says that effective January 1, 1997, its W1AW Official Bulletin Station will be moving its Tuesday and Wednesday morning code practice and bulletin schedules to 21:00 UTC. This translates to 4 PM Eastern or 1 PM Pacific.

This change affects the Tuesday and Wednesday morning schedules only. The League says that it is being launched as part of a reallocation of resources to permit routine station maintenance.

(Via TWIAR)

(*****

SECTION LEADER NEWS - QRT

The League has also announced that it is suspending publication of its Section Leader newsletter, effective immediately. Its replacement will be a separate quarterly newsletter for affiliated clubs, to be called the ARRL Club Companion.

The League says that it will continue to publish its Field Forum newsletter for the entire Field Organization on a quarterly basis. It will probably include articles that would have formerly appeared in Section Leader.

ARMY MARS TO HANDLE HOLIDAY GREETINGS TRAFFIC

The Army Military Affiliate Radio System is sponsoring its fifth annual Operation Holidays program. This, according to Lorraine Matthew, N4ZCF, who encourages every Amateur Radio operator and especially MARS members to invite the public to exchange holiday greetings via ham and MARS radio messages.

(Via Packet)

(*****

SANTA MARIA PIRATE

A probable FM bootleg station on 88.9 MHZ is on the air in the Santa Maria California area. The only audio seems to be music from a CD changer, with the expected level variations.

According to writer Bob Gonsett, W6VR, this transmitter operates just on weekends and has been on with some interruption for about 6 months. According to a monitor station it can be heard for miles around the Santa Maria area on a typical car radio.

Another bootleg station calling itself "Excellent Radio" is not as clandestine. This Grover Beach FM bootlegger, has been on the air for over a year with a storefront location, bumper stickers and ads on a local Low Power TV station.

(Via CGC Communicator)

(*****

RADIO STATION WEBSITES

As an aside, were you aware that over 2000 commercial radio stations worldwide now have web sites. This, according to a list maintained at the Massachusetts Institute of Technology. Of coarse this list does not contain the now tens of thousands of ham radio station web sites provided by radio amateurs worldwide.

CANADA THREATENS VIEWERS OF U.S. SATELLITE TV

The Canadian government is threatening to file criminal charges against the estimated 200,000 Canadians using satellite antennas to receive U.S. television programs that aren't supposed to cross the border. In a brochure issued on November 14th, the industry ministry makes clear for the first time that purchasers as well as sellers of unauthorized satellite services could be fined or even jailed.

Despite the warning, it is unlikely viewers watching U.S. satellite TV in their homes will be raided by police. But there could be a deterrent effect on dealers, who are instructed in the pamphlet to inform customers which services are legal and which are not.

(*****

SHUTTLE VIDEO

Live video beamed down from orbit has been a part of NASA space shuttle missions since the program began, but a recent flight featured the debut for the space agency of a teleconferencing technology. A technology that allowed astronauts to take part in live two-way video.

Coherent Communications Systems Corp. and NASA engineers modified Coherent's Call Port product so that it could relay two-way audio accompanying the video links by satellite between the space shuttle and facilities on the ground. The astronauts used the system for video conferences with doctors regarding experiments aboard the flight and for conversations with family members.

SATELLITE ENTHUSIASTS MEET IN TUCSON

More than 300 amateur satellite operators gathered at the Holiday Inn City Center in Tucson, Arizona, November 8th through the 10th, for the 1996 AMSAT North America Space Symposium. Forums included an update on the SEDSAT project, the PICOSAT system and plans for Amateur Radio aboard the upcoming International Space Station. Phil Karn, KA9Q, offered a spread-spectrum tutorial and Assi Friedman, 4Z7ABA, updated everyone on the status of TechSat. Attendees were also treated to a Phase 3D progress report.

A highlight of the banquet was dedication of the Phase 3D spaceframe to the ARRL in recognition of contributions totaling more than $530,000. ARRL Vice President Joel Harrison, WB5IGF, accepted the dedication plaque from AMSAT North America President Bill Tynan, W3XO.

NEW CLASS FOR DUTCH PACC

From the contest world, word that the annual Dutch PACC Contest held every year during the second full weekend in February has a new entry class. According to Kees de Haan, PA3ARV, the new category is called multi operator and multi receiver. Kees says that it will give ham radio club stations and as well as groups of SWL's all over he world the opportunity to participate in this event.

(Via PA3ARV)

(*****
DX

In DX, we have a different kind of report this week. Its the story of a recent DXpedition to St. Lucia that was not as easy at most in the pile-up thought.

The last two weeks here in Dayton have been cool and rainy. Typical late November weather. A touch of snow here and there completes the picture.

Combine the weather and the CQ World Wide DX CW Contest and you have the basic elements of the Southwest Ohio DX Assoiciations reason for packing up lock, stock and barrel connector and heading for the sunny Carribean.

One small problem. St. Lucia wasn't really all that sunny this time.

"On Thursday or so there was quite a bit of rain. But it really didn't affect us much other than delays in getting the antennas up. No was no damage or anything like that here. In the capital there was considerable flooding, and damage and so forth. Which lead to a follow a up disaster. Which was that we ran out of water to bath with up here."

That's J68ER, Bob Eslaire, SWODXA President and W9UI when he is home. Eight hardy souls battle Murphy and mother nature to put J6 dx on the air. Bob comments on the final results of 48 hours of contesting.

"No fried finals, no fried equipment. No break downs. And Q's 7512. That's with the dupes out. The log has not been through to see, make sure that everything is correct. This is raw kind of stuff. Zones 149, countries 501 and if you crank that through that comes out to be 12.5 million points."

Now some of the group eat, sleep and breath radio. I'm curious, when you guys are not playing radio, what are you doing down there?

"I don't think we understand that question."

Lastly, it is always nice to have friends with pull. Bob describes the efforts of a friend that really went above and beyond the call of duty.

"J69C, his name is Clem came up after the contest and wanted to know how we did and so forth. And we told him the same things that we told you. He told us that he had been informed or he may have called and checked with the power people on the island that they were going to turn the power off on Saturday. Probably some sort of scheduled maintenance of some sort. And he told them, No, No don't do that. We have a group of hams here and they were doing something for St. Lucia so don't turn off the power. If you are going to turn it off, do it on Monday. They did not turn the power off. So we had a complete weekend of uninterrupted power. Which is not something that you can always count on."

If the score you just heard holds up, it will be another North American Multi-Single record.

(Newsline and A/R News Weekly)

ALMA YODER - SK

Several listeners have sent us clippings dealing with the passing of a pioneering radio broadcaster who became one of the medium's earliest talk-show hosts before switching to TV. Her name was Alma Kitchell Yoder and she was 103 years old when she died a few weeks ago.

According to her obituary notice which was published nation wide, her voice was first transmitted by the Amateur Radio Corps of America from an experimental station off the New York harbor in 1917. This was before most Americans knew what radio was.

She later sang on numerous radio programs before becoming a talk-show host. In 1938, Alma Kitchell Yoder became the emcee for one of the original radio talk shows. It was called "Let's Talk It Over," and she interviewed many prominent women of the day, including Eleanor Roosevelt.

She eventually moved to commercial TV, singing in the first televised opera and capping her career by presiding over the first ever television cooking show.

A few of the notes we received said that they thought that Alma Kitchell Yoder once held an Amateur Radio license. We checked as best we could but we could neither prove nor disprove that claim.

(Via listener submissions)

December 16, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, NW3N, N4GN, KK6EK, WA8JOC, KD7H, K9EL, WB0RJY, NL7TB, 9M2/G3NOM, DF4RD, DF7RX, JA0VSH, JH1ROJ, PY1VOY, RW3XA and ZL2TT for the following DX information.

5R, MADAGASCAR. Rick, PY1VOY, heard 5R8EW on 20 meters SSB at 1830z with a real good signal in Rio. He stated that 5R8EW was trying to copy USA but had no success.

7O, YEMEN. Over the past week there have been several reports of possible activity from this one. Franz, DJ9ZB, and Zorro, JH1AJT, reportedly are leaving for a demonstration operation at Aden, Republic of Yemen. Their demonstration operation and discussion of amateur radio will be with the Minister of Communication officers there. The orginal report OPDX received stated, "....Based on a VERY reliable source in Japan, JH1AJT and DJ9ZB will be in Yemen December 14-21st for a radio demonstration. They believe there is a VERY good chance to receive permission to operate. The operation will be SSB only: 3797, 7060, 14195, 21295, 28495. No WARC, CW, or RTTY. Equipment: TS50 and FL2100B Antennas: R5, plus dipoles for 40, 80. Appropriate best times for propagation to all parts of USA have already been passed to the team." The callsign is currently unknown at this time, but the QSL route will be via JH1AJT..... Zorro, JH1AJT, was heard saying that they will make as much time as possible to be on the air, but it might be very limited. They will focus on 20/40/80m bands. Zorro would like to put together another team for next year that would who take care of higher bands/WARC bands/CW and other modes if permission can be obtained. LATE UPDATE: As this bulletin was being prepared 7O1A showed up around 1430z on 14180 kHz listening up.

D2, ANGOLA. D2EB was heard on 14210 at 2130z. His QSL address is: Box 2344, Luanda, Angola.

EA8/NW3N, GRAND CANARY ISLANDS (a NASA site). Rich, NW3N, and Chuck, KE3ND, are part of a "mobile crew" that is supporting the MINI-SAT launch

out at the Grand Canary Island. Rich will be attached to Range Saftey as a Data Quality Officer, and Chuck is engineer in charge of command/destruct. They will be operating out of a mobile van built up for support of this mission. The van is located at the old NASA site at Masapolomas, now INTA, the Spanish government's counterpart to our NASA. The site is a couple hundred feet above sea-level and has an expansive view of the ocean to the south and west.
During off-hours, they will try to operate EA8/NW3N on 14260 kHz (SSB) and 14036 or 7036 kHz (CW) if possible. (Note: local time there is GMT) The equipment they will be using doubles for "over the horizon" communciation for the project. An IC-735, 2KL-C linear amp and a Cushcraft R-7, as well as a 40 meters folded dipole will be used. They are restricted to 200 watts. They have one transceiver, so it will be difficult to cover all frequencies. Due to a schedule changes, they will not return until January, 1997. The specific date is yet to be determined. ADDED NOTE: Rich's, NW3N, complete message sent to OPDX with more details about this interesting "Special Event" station will be sent to all OPDX InterNet Subscribers.

E3, ERITRIA. Jin, JF1IST, who was active as E31FAO last week, unfortunately has to go QRT on December 12th, cutting his operation short because of a business trip.

KC4, ANTARCTICA. Nikolai (Nick) Makarov, UA3YH, has been active on the air from the Amundsen-Scott South Pole station. He will stay there until late January, 1997. Check these frequencies: 14020 CW and 14180 SSB at 1600-1900z for Europe and 0000-0300z for North and South America. He uses an IC-735 with amplifier IC-2KL (500w) and 6 element monoband Yagi on 20 meters directed to the U.S.A., Tri-bander (20-15-10m) antenna directed to Europe and a 3 element monobander Yagi on 17 meters. He uses both the callsign KC4AAA (QSL via NC6J) and callsign UA3YH/KC4. QSL for contacts with UA3YH/KC4 would be sent via bureau via RW3XA (ex UA3XBY) or SASE to Box 461, Obninsk, Kaluga region, 249020, Russia.

QSL INFO AND NEWS.....
Ken WA8JOC, states "The final CY0AA cards were going out December 10th, the only exceptions to this will be the completely not in log cards, single band not in log cards, or lastly, the re-requested reviews for bands/modes...etc... in some cases, we have multi-band cards that are "in the log", but one or more QSOs might not be there...we are re-reviewing the TOTALLY not in log QSOs completely...we are not here to reject a QSL, but rather to try to see if QRM/QRN played a part in us not copying the call... Unfortunately, not all will make it, and to those individuals we apologize, and wish them GUD luck in the future expeditions that go there!... You never can tell!!! hihi... very 73 Ken, WA8JOC (X-CY0AA) P.S. This info is only from the WD8SDL side... VE9AA is still processing some cards which we have no direct knowledge of...."

ANOTHER ZL8RI UPDATE.... Ron, ZL2TT, reports the ZL8RI team has sent out about 15,000 QSL cards since the end of the DXpedition, and to the

best of his knowledge, "ALL CARDS HAVE BEEN RESPONDED TO". Their policy was that those who sent them SASE, IRC or green stamps got their cards back direct. Those that sent via the bureau got their cards back the same way. QSL Manager is ZL2HU, P.O. Box 56099, Tawa, Wellington, New Zealand.

R1FJZ QSLS. Acccording to DF7RX, "there is a very problematic situation about R1FJZ. The operator is still on the island, but the support-situation is very difficult. So .... the problem to get the logs is difficult, too." Bernhard, DF7RX, met R1FJZ's XYL some time ago passing all direct letters about QSL-requests since July, 1996, that Bernhard has received in the past. The lastest information he got (a few days ago from R1FJZ) is .... 'the cards are on the way .... or will be sent/answered soon ..., but PLEASE be patient!' All cards will be answered!"
HS50A - QSL Managers have been appointed. JA9IFF will deal with Japan only. Address for direct cards or lists of contacts (SAE's please): Mr. Jim Nakajima JA9IFF/1, Setogaya 138-19-704, Hodogaya, Yokoham, 240 Japan. QSL cards will be accepted via the Bureau. E-mail QSL requests will be accepted for Bureau replies: jim@ba2.so-net.or.jp
QSL via I1JQJ for Europe and the rest of the world. Address for direct cards or lists of contacts: Mauro Pregliasco, CSO Novara 39, Torino, TO 10154, Italy. QSLs will be accepted via the normal Bureau routes. E-mail QSL requests will be accepted for Bureau returns at: hs50a@pc.fr.flashnet.it ... The following information should be presented: Call sign, QSO(s) data (date, UTC, band, mode). Mauro's personal E-mail address : i1jqj@fileita.it
Jim JA9IFF/1 has already set up HS50A "DX Pedition Home Pages" in English, Japanese, and German languages. nternet Addresses:

English: http://www.eurolife.com/user2/hs50a/e.html
German: http://www.eurolife.com/user2/hs50a/g.html
Japanese: http://www.eurolife.com/user2/hs50a/j.html

TAKE NOTE! HS0AC is NOT via WA0RJY. Jack has been receiving a lot of QSLs for HS0AC (especially 160 meter QSOs...) and he doesn't have cards to reply. He will be returning the cards with a note about the correct route. The correct route for the HS0AC QSL cards is via Stig, LA7JO. QSL route for HS0/WA0RJY contacts is via Jack (WA0RJY).

8R1K/OH6DO/AB6NJ QSL info. If you are in a hurry to receive your cards Marko, OH2DO, reports the following new address: Marko Myllymaki, 1153 Esters Rd #106, Irving, TX 75061.... However, he prefers QSLing via the following new address in Finland: Marko Myllymaki, Mehtokuja 10 B 3, 63700 AHTARI, FINLAND. This new address in Finland is his official QSL address.

USI Alert (1st. of the Oregon islands!). John, NL7TB, and others will be active from the mobile on Columbia River Islands near Astoria, OR. Try 14260 kHz +/- starting around 1700z (or earlier) on Saturday, December 21st. They will QSY to 40 meters if requested. Islands may be activated in this order: Little (WA-new), Puget (WA-072R), Anunde (OR-new), Long

(OR-new) and Svensen (OR-new). The first two islands will be accessed via ferry and should be easy to do while the others may take 30 min. to 1 hour driving time each.

V6, MICRONESIA. Tack/JE1SCJ, Kazu/JA0VSH, and Kazu's wife Miyuki, JG0PBJ, will go to Pohnpei Island (OC-010) and operate from December 28th to January 1st as V63YT, V63KZ and V63MP, respectively. They will be active on 160-10 meters including WARC bands. Kazu told OPDX he is interested in 160 meters, so he maybe active everyday. Check the frequency 1823.5 kHz. Their equipment will be as follows: TS-850S + Amp Output 500W, IC-736 - Output 100W, and antennas will be a Tri-band HB9CV; Fishing rod Vertical for 40m and up; and an Inverted-L for 160, 80, 40 meters. QSL to their home calls, direct or bureau.

VK0, HEARD ISLAND WEB SITE UPDATE. Bob, KK6EK, provides the following update for the Heard Island web site: http://www.ccnet.com/~cordell/HI
"I will maintain this site until Dec. 23, when I leave for Europe. Updates during the expedition (January) will be done by Don N1DG (WB2DND), and will be accessible directly at this home URL.
Please note that we are listing every person and organization who has made a contribution. You can see these by adding /scoping/HI97_sponsors.html to the home URL (above).
You might also have interest in the little animation of the site, which you can get by adding /java to the home URL. The animation approximates our layout and operations on Heard Island. You must have a java-compliant web browser to see the animation."..... Bob KK6EK

ZS8IR, MARION ISLAND (Reports of Storm Damaged!). Rob, KD7H, received a message from Chris, ZS8IR, regarding storm damage to his antennas. Last weekend, Marion Island was hit with a bad storm that lasted two days. Chris called it a "major" storm. The low band vertical (Battle Creek Special) was damaged: "it snapped like a straw" and his two rhombics' wires snapped. The rhombics have been repaired but he is not sure if the vertical is salvageable.

-=-=-=

shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

I don't disagree with you - you attributed someone else's quote to me,
though. Those words are not mine. My post followed that one.

Trying to set the record straight.

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

Please don't make me repost the 'Best of Squiggie' at Christmas time.
Don't worry about your dad, Carl. He's safe. We haven't hurled anything
at him hard enuff to hurt him. Yet. But wait 'till we catch him at Dayton...

And if you wanna be just like me, Jerry, you'll have to learn how to fondle
plastic. Gently. The same way you would fondle a womans cli..... never mind.

I don't pound brass. Too slow. Say HI to the squids for me. What do you do
with that squid poop anyway, put it in your garden or in your seafood salid ?

Merry Christmas,

Jim KH2D

>What is Carl's handicap?

He has numerous handicaps. To mention a few:

1. He's Morsely Challenged. 20 WPM was years ago. His wetware is drying up.

2. He's has chronic keyboard dislexia, a disease which causes him to press the wrong keys when he is typing, and makes him realize that nothing he types is important enuff to waste any of his time fixing the mistakes.

3. He suffers from fccpetitionphobia, a disease which causes him to believe any no code petitions to the FCC will be rejected.

4. He doen't believe in Magic.

5. Gerald is his friend.

Said Gerald McPoP the new spokesperson for Carldistrophy.

>While I admit that his style is baiting I don't really understand the
>hate directed at him.

There are lots of things you don't understand, Gerald. Like you
don't understand there should be a comma between 'baiting' and
'I' in the above sentence.

>OTOH Len's postings that I have read seem logical
>orderly just simply anti code testing.

You should see his private email..... He's a sweetie in the newsgroup
but he's a mean mo fo in private......

>For this he is rewarded with stupid nicknames and insults about his age.

And what were you expecting ? The Pulitzer Prize for War Stories ?
Warp Admiral Grandpa Lenny is only here for two reasons. He's practicing
biting his lip (which I must say he is getting much better at) and he hoping
for a free lunch. On the ham bands.

>What is interesting is after all the fuss made about Carl's spelling/typos
>by the procode crowd

There we go again, McPoP. Telling little tiny itsy bitsy white lies to make
our position look better. Spreading a little Squid Poop are we Gerald ?
You best go check your Deja Vu News Archives and I am sure that you
will find that the 'fuss made about Carl's spelling errors' was a PRIVATE
fuss between Squiggie and Steve and had NOTHING to do with the
'procode crowd'. Your memory is apparantly as bad as your facts are.
If you want to get rid of CW because you can't pass the test to upgrade,
you should spend some time figuring out what is wrong WITH CW, and
not spend your time telling fibs about people who USE CW. Unlearn
that trick that Carl taught you.

>one of their own gets a little flack for a grammatical slip

Correct. Any flack from you is usually little. Very little.

>they go nuts. If it look like a hypocrite and it talks like a hypocrite
>what might it be?

That should be 'LOOKS like a' Gerald. Nobody went nuts, Gerald McPoP. Same ole Same ole. You haven't been around in a while for your whipping, and you can't live without it, so you PoP'ed in, made your usual useless remarks. With your inate inability to follow a discussion, the only thing you could find to comment on was spelling errors. First, I was gonna let you off cuz it's Christmas. But then I realized the best thing that you could get for Christmas is a whipping, because you really enjoy being whipped. So find some more spelling errors, make some more comments about your daddy Carl and all the mean things the nasty old procode people have done, and when you are finished being whipped, you can PoP off into the sunset, like usual, and we'll see you again in a few months.

Maybe we need to find a project to keep you busy, Gerald. Since you have appointed yourself the new spokesperson for Carldistropy, maybe you could get Grandpa Lenny to be the poster boy, and then the three of you could get your picture on the cover of QST magazine ..... Lenny, Squiggy, and Moe - the three stoodges of ham radio.

OK, I'm finished. Go look for the spelling mistakes Gerald.

3701. Why are there HAM OPERATORS on rec.radio.cb?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-15 00:00:00 UTC
From: mnmaniac@aol.com
Message-ID: <19961215144600.JAA01712@ladder01.news.aol.com>
Source record: 209968

Anyone else notice the recent abundance of HAM OPERATORS posting messages and starting quarrels on the CB newsgroup? It's kind of funny...I mean, why would HAM OPERATORS lower themselves to talking with the CB'ERS on their newsgroup, instead of staying here and discussing the important things in life like Morse Code with the other HAM OPERATORS?

Gee, do you suppose that it just might be because CB'ERS tend to be more fun than many of the old and stuffy HAM OPERATORS?

Hi! to everyone
This group sounds like all male. I'm a little old senior citizen (female)
who is studying to take the test.
Do any of you know of a good book on the subject? One that can
help me with the math part mostly. Also would like some advise
on using the air waves correctly, some does and don'ts. The only
part of Morse code I know is S.O.S. so guess I have a long way to go.
Happy Holidays

Gayle

Yeah, I know what you mean. Let's see.....

PoP GoeS The WeaSel. Code Robot is fine, Jerry, you call me whatever
blows your dress up. Tis the season to be Jolly, you know. I'll take
your

word on squid manure being lower than whale shit, you should know, you've
been there. Thank you. Happie Hollidays.

73, Jim KH2D

Congratulations Dick. I see you have already met Squiggy. Meet Lennie, the
other half of the Boobsy Twins.

73, Jim KH2D

Mac, did you catch your wife with somebody from the FCC ?

73, Jim KH2D

Grandpa Lenny caught one, back during The Big War. It carterized his hemoroids,
but scientists were able to determine the electrical value of the ball lightning
by plugging him into a wall socket and measuring how much current it took to
make his hair stand up the same distance as it did after he caught the ball
lightning.

73, Jim KH2D

Yeah, I can see how you'd call what I said constructive. Ypu should try to practice what you preach, or you end up looking like the pompous, sad pathetic little windbag that you are, little man. I went thru DejaNews, and finally got tired of sifting through all your posts, but one statistic stands out , and that's the incredibly negative attitude of everything you post. Maybe if I went through everything, I might have found a few positive comments, but I had too much pity for you to continue. It's pretty obvious to me, you're nothing more than a WA4D wannabe. Can I ask you a question? When were you first liscensed?

Cecil, this is exceptionally wierd. I never said that anyone was
starving instead of giving up their ham radio. I'm sure that the
people in these countries I have worked simply assembled the CW
transmitters and receivers from loose parts they had on hand. Please
learn how to read.

Thanks Jim!This CBer with a(probably CW waivered,because his toe
hurts)Ham ticket has appointed himself 'guardian angel'of the CB group.
I started out trying to give some friendly advise to a few of them
who were asking reasonable questions but several others who think it
'works this way because Big Buck says so' just couldnt handle the idea
that they could be wrong!
Only reason I went back was to generate a chuckle!

>fun than many of the old and stuffy HAM OPERATORS?

Well, it's because the CB'ers won't come here. Those particular hams
are in the hobby because of a huge deficiency of self-confidence. They
originally came into the hobby because they felt that the license,
which anyone can get after a few weeks studying the multiple-choice
question pool, no matter the class, would forever grant them the
respect they feel they were denied at the mere mention that they were
a Ham. They now live exclusively to demean others, using ham radio and
the Usenet as a phallic prosthesis. They are the people you see
posting hundreds and hundreds of messages, the great percentage of
which are venomous and negative, with very few complimentary or
helpful inclusions. They now go to the CB groups because this is a
place they need to have exist as much as they need 11 meters to exist,
a place where they can try and perpetuate their unquenchable drive to
belittle others as compensation to their own shortcomings.

Of course, I may be totally wrong and off the wall. They may just have
CB Envy...

I don't preach. That's Squiggie and Lennys job. Mostly I comment on
sermons.

>pompous, sad pathetic little windbag that you are, little man. I went
>thru DejaNews, and finally got tired of sifting through all your

Bored, are we ? Snowed in with nothing to do but Deja Vu ? Try some DX,
Mark, it's a lot more fun. I'm not sad, I'm happie. Whatever gave you that
impression ? Little is relative, you must be seven feet tall and 400 lbs I
guess ? If you are feeling wind, I'd suggest you check for open windows
(the ones on the house, not the ones on the computer).

>posts, but one statistic stands out , and that's the incredibly
>negative attitude of everything you post. Maybe if I went through
>everything, I might have found a few positive comments, but I had too

IC. You have taken an extensive course in CRT psychology, and you
can diagnose peoples attitudes remotely via the internet. Interesting.
Is that what you do for a living, Mark or is it only a hobby ? Are you going
to send me a bill, or is the first diagnosis on the house ?

Don't waste your time with Deja Vu, Mark. I don't need your approval for
anything I do. But thanks for the offer anyway.

>much pity for you to continue. It's pretty obvious to me, you're
>nothing more than a WA4D wannabe.

Oh, you're a friend of Mike's too ?

>Can I ask you a question? When were you first liscensed?

Sure you can ask questions, Mark. I can't guarantee you'll like the answers,
but anytime you want to ask one, go right ahead.

I really don't recall the exact date, Mark, as it wasn't a monumental event, and
I am not the kind of person who remembers dates. Sometime back in the 70's is
about all I can tell you. Maybe you could look it up on Deja Vu. If it's part
of your CRT pshyco-analysis, I may be able to dig up a date for you. Do you
think maybe I am the way I am because my horrorscope was bad on the day I was
licensed ? Or maybe the ARRL has published a report that says most good hams
were licensed on Tuesday, and most bad ones on Friday ? Anyway, if I had to
guess, I would say some time around the time you were ten years old.

>73 Mark WI1W

Obviously, you must be new here. Let me spend a minute to tell you what's going
on. The group of posters is a pretty regular bunch. Main subject of discussion
is code / no code. Some people are sarcastic, some are silly, some are
serious, some are not serious. Some are seriously ill. After you read what's
going on for a while, I imagine you will develop a feel for who is what, and you
will see a relationship between what is said today and what was said previously.
You will find that all you see is not what it appears to be at first glance.
Reading between the lines is a skill you must posses to enjoy this newsgroup as
much as some of us do.

As far as the profanity goes, I would suggest you save that for private email.
Most people, no matter what side of the discussion they are on, are offended by
the use of it in the newsgroup. The are some younger hams and some ladies
who are regular visitors here, so if you get another male hormone rush, and you
feel you need to direct some F words to me in regards to something I typed, feel

free to do so via email. Doing it here doesn't make me look foolish, it makes
you look foolish, but I imagine you didn't realize that when you typed your one
liner. It can come back later to haunt you. Digging old stuff out of Deja Vu
that I said won't cover your mistake, but this newsgroup has a very short
memory, so don't run off with your tail between your legs just because you made
one. Name calling is widely accepted here, minus the profanity, of course,
but I suggest you get to know people before you partake of this activity.

Anyway, Mark, that's about it. Stick around, meet the gang, and have a good
time. This is live, so it's much more fun than digging around the archives and

looking people up in online call books. Some of us here even have radios, and do other things besides playing with the computer. There are a few techno weenies here, so you can get all your technical questions answered here too. Oh, one other thing. Try and watch the spelling mistakes. We all make them, and most of us don't mind, but we do have a grammer expert who has a tendency to PoP up once in a while and try and nail people for silly things like spelling errors.

73, Jim KH2D

3710. Coast to coast 2m.?

Newsgroup: rec.radio.amateur.misc

I don't know if this has ever been tried, but has any groop of hams tried to link enough repeaters together to attempt a coast to coast Qso on 2 meters? I don't know If such a thing would even be permissable under Fcc guidelines, but it would be interesting to try, wouldn't it? Such a joint peoject might once again prove that hams can STILL work together and innovate ideas that are just too risky for others to try. (but, then again , if hams develop it, more than likely, some corperation would probably steal it...NEVER MIND.)

Well, I had "fun" with Mike a few years ago on Fidonet. He came into
the group with about a 2 week warning, and created quite a commotion
in Sheepland, everyone was soooooo scared. One thing about Mike, his
style depends entirely on having they podium with his big signal and
the half-duplex nature of normal-mode HF operation. He just failed
miserably on this medium, where he didn't have any signal dominance. I
was amused by this and played with the mousey until he couldn't take
it anymore and did the tail between the legs thing you seem to be fond
of. I even sent him my QSL thanking him for the opportunity to let me
make an ass out of him in a public forum. he never even sent me his
QSL, I was kind of hurt.

No, I was just curious, that's all. If it was any later, I'd have had
to take the position that since you didn't get liscensed by going to
an FCC Field office, you were less of a ham. I like using that one on
certain pro-coders, the reaction is sometimes fun. Ok, if you were
liscensed when I was 10 years old, then I was liscensed 4 years later.
I took the Novice test in 1977 and FAILED! In a move pretty typical of
the way I grew up to do things, I got pissed, hit the books, and went
to Boston 2 months later and passed the General exam.

The initial "feel" of the New IC756 is good TX/RX audio is gud with nice
reports being rxd.
You cannot monitor dual watch out of band, it has to be the same band.
DSP is nice with the NR cct, and TX audio can be tailored.
another great seller?.....quite so!

Well, the requirement for the highest level FAA license is still "only"
1500 hours and not all that has to be PIC (Pilot in Command) time, but that
can still take all the money you have and then some.

Now Carl, I feel it's relevant. You don't know the man and yet you sit behind the relative anonymity of your keyboard and bray on about K1ZZ as if he was another Jimmy Hoffa. I don't recall him saying anything similar about you. Dave doesn't work in a political position anymore than a plant manager does. If higher-ups don't think he's doing the job, he can be booted. Most of us have a boss or bosses and have to report to them and be responsible for the actions we take at work. Dave does too.

Carl, you're making a quote from an old movie. The character who uttered the lines had gone insane in the film. You're not going to take what anymore?
>

Nope. I'm one of those who tries to discard the hysterics and theatrics in order to find the actual agenda. Then I like to discuss the matter in a fairly reasonable manner. You've not come up with an actual example

of an irresponsible action by Dave Sumner--not one concrete instance.

> ... I've talked to LOTs of folks who think he's long overdue for
> replacement ... he's built a
> good-ole-boy club and it's time to knock down his clubhouse and clean
> things up ...

Dave didn't build a club house. He's worked hard for the ARRL for many years. I've talked with LOTS of folks who think his work is consciencious. That doesn't mean I'm always in agreement with anything the ARRL does. There's always room for healthy dissent. I don't see any good-ole-boys in evidence and haven't the vaguest idea of what you're talking about when you say it's time to knock down his club house. The ARRL is open for full membership to any licensed U.S. radio amateur and open for associate membership to anyone with an interest in amateur radio.

Can anyone tell me how broad is the 10 meter bandwidth for the A3S triband antenna. Does it cover the entire way from 28 through 29.7 MHZ with a reasonable SWR. Thanks.

Jim

Mike

I have the same problem and I have 2 solutions.

1) Get a Hustler Bumper mount and use it but be sure to ground the mount
to the frame.

2) If you have a trailer hitch weld a piece of galvanized flat metal to
it and put a Radio Shack 3/8" Ant. mount to it and that provides a good
ground and sturdy one also. This can also be welded to the frame and
have a person who works on Iron Railings bend it so that it goes up and
molds to your bmper shape.

What you state is an example of the 90/10 rule which states that there
is only about a 10% minority in any group which drags the remaining
90%, kicking and screaming, down out of the trees and teaches them to
walk upright. Only a small number of amateurs will ever innovate or
contribute positively to technical advances in the service. The rest
are just test loads on the system. Test loads are useful. Dr. Rohde
credits them with helping push HF receiver development. In a sense,
amateur radio is the world's largest radio communications beta test
organization. And amateurs *pay* for the privilege of being test
loads. That is a tremendous resource for those who do innovate.

>Maybe what is really the issue here is how to motivate the technically
>advanced folk to work their magic. In spite of complaining of the absense

>working on them? How does this work anyway? I don't know about you guys,
>but I think my limit to being able to slave over a project for no pay
>ends somewhere in the 30 hrs a month range. You know?

For those who innovate, most are driven to do it. Not by lures of
fame or fortune, but because they can't help themselves. An inner
force drives them. It isn't just something that they want to do,
it is something that they can't stop doing. A woman at a dinner
party once asked Issac Asimov how could he come up with such
crazy ideas. He responded, "How can you not?" He could not stop
the ideas from coming, and felt compelled to act on them. The
creative innovative person is like that. He can't stop the ideas
from coming, and he is driven to put them into action.

Few innovators get rich. They give their ideas freely to anyone
who will listen. It is actually a relief to put the monkey on
someone else's back. That liberates them from the compulsion
to act on it themselves, and lets them deal with the next idea
waiting in the wings. The routine boring job of bringing a product
into production and marketing it is stifling to the innovator. He
is impatient to move on. This is the biggest danger. Many concepts
are aborted because the original drive is gone when the idea
is handed off to another. So many refuse to delegate. To get
it done *right*, they realize they have to do it themselves.

Many of the folks in TAPR and AMSAT are like that. They are driven.
They can't help themselves. They *must* do the things that they
do. Not for money. Not for fame. They do it just because it is
their baby and they must guide it to maturity. Families often
suffer because of this. Job performance often suffers. But they
can't help themselves. They have to do it. Eventually, most
burn out. That sort of creative energy can't be sustained
indefinitely. Some can strike a balance, bank the fires a bit
and slow down, but many cannot.

TAPR and AMSAT people are all volunteers. They don't get paid
(except for an office staff). Sometimes materials costs and
tools are furnished by the organization, but often not. The
number of hours some of these people put in is amazing, often
more than they put into their mundane jobs. They eat, sleep,
and dream their projects. And some of them probably wonder
why you do not.

This would be amusing if it weren't so common. The only two OOK Morse exclusive band segments in US amateur radio are 50.0-50.1 MHz and 144.0-144.1 MHz, neither of which require a Morse test to use. Those band segments you're so happy to make OOK Morse only are actually the *data* segments of HF. Those of us operating data modes there would not be amused if we were kicked off of *our* band segments (which we graciously share with Morse users). You can go beep at the phone guys if you like (OOK Morse is allowed everywhere), we can't, we aren't allowed outside the data segments with our twitters and chirps.

>to communicate DX via EME, and why?
>
>Dick WD0ANB

Fair question, Dick, and it was discussed recently at length on
moonnet. It would appear that a large number of EME DXers believe
that if it isn't manual, it isn't a "real" contact. So I suppose
if I wanted to work DX via EME I'd have to use the methods that
the DXers use (SSB or CW). Fortunately, I'm not interested in such
gaming. But if I did have a reason to actually use EME for communications
purposes, I'd use non-coherent multiplex wide shift FSK. The US Navy
had good results with that in the 1950s. It is robust against the
Libration fading and Faraday rotation characteristic of the EME path,
and 60 WPM rates can be maintained with amateur power levels at the
current SOTA of amateur FSK demodulators and FEC techniques.

At first blush, it would seem that PACTOR II would be the obvious
answer since it can operate at CNRs below the human hearing threshold,
but it is the wrong choice for a couple of reasons. First, the timing
parameters of the mode are too short for the path length of EME. So it
simply would not work without modification. And second, narrow coherent

PSK would be badly distorted by Libration fading. For that sort of multipath environment, operating with the energy envelope is more effective than trying to make phase decisions. An alternative which should be workable would be a CDMA SS signal using RAKE receiver technology. That's extremely robust under multipath conditions. But that's a little high tech even for my tastes at the current amateur SOTA.

As an aside, maximum "DX distance" for EME is limb to limb, where ground gain is greatest. So well equipped stations should be more likely to make SSB contacts at maximum "DX distance" than if they were closer together and lost the benefit of ground gain. If the distance records are all held by CW operators, it is likely that is because well equipped stations weren't properly located to accomplish the contact. As a further aside, there is a greater distance variation between apogee and perigee of the moon than the limb to limb distance, so in a sense the "DX distances" in the record books are meaningless. Two stations a block apart terrestially could work a longer path when the moon is at apogee than two stations on opposite limbs of the Earth when the moon is at perigee.

>
>Maybe ARRL isn't too effective now...I've not followed things too closely for
>a while...but if they lost non-profit status, operating costs for what
>services there *are* would go a whole lot higher!

There is a simple (and legal) way around this problem. It is called
a PAC. The NRA, a non-profit, has the NRA-ILA, a very vocal lobbying
group which spends heavy money influencing political matters. There
is nothing to stop the ARRL from forming an ARRL-ILA. The ARRL already
has experience with the sorts of requirements this brings since they
have to operate a firewall between their VEC activities and their
publishing empire, and they already have the ARRL Foundation as another
separate entity.

If the ARRL *wanted* to become a major political lobbyist, there's no
legal reason that it could not be done, and without risking the tax
exempt status of the publishing cash cow in the process. But the fact
is that the BOD doesn't *want* the ARRL to become a lobbying force
for change. For the most part, they like the status quo. And they
claim that being non-partisan makes them more *respected*. That
and fifty cents will buy you a cup of coffee in the halls of Congress.

Now I called the publishing empire a cash cow above, but the League
appears to be in somewhat of a bind financially. They just announced
that they are stopping printing of the ARRL Letter because (they say)
the $12,000 a year it costs them is too big a drain on their finances.
QEX is rumored to also be running a loss. They've had to pay for a
lot of expensive junkets recently. Books haven't been selling that
well. Etc. It appears that the ARRL will show a deficit for the
fiscal year. A quick inside page count of QST would indicate that
they're pulling in about $112,500 an issue in ad revenue not counting

the 4-color covers. That sounds like a lot, but there are a lot of mouths to feed in Newington, and the printers and the Post Office get their share too. They may be just breaking even on QST.

(Note, $1.3 million a year may seem like a lot of money to you and me, but remember it is gross, and really represents the kind of cash flow a *small* business would have.)

The real cash cow is *dues*. They're pulling in about $5,860,000 a year in dues. And they've announced a dues increase. Now that sounds like a lot too, and I don't know where it is going, but it is chicken feed for an effective political organization. The NRA-iLA spent $50,000,000 on the 1994 elections. They take in $162.000,000 a year in dues from over 3.5 million members. Meanwhile ARRL membership has dropped to about 27% of licensed amateurs. (That's actually a gain in raw numbers, but amateur radio is growing faster than the ARRL.)

If the BOD is trying to keep the ARRL fiscally sound with the dues increase, then they must be expecting a shortfall of nearly half a million dollars in 1997 if dues were not increased. Where's all the money going? I certainly don't know. I don't think the electric bill to run W1AW is *that* high. They did kick in a quarter of a million dollars to AMSAT, though. That's a significant hunk of change, about 5% of annual dues.

It would seem that even if the ARRL *wanted* to be an effective lobbying organization, it doesn't have the money it takes to pull it off. If the ARRL had 90% of US amateurs as members, and doubled dues, it would begin to get into the league of the major players. But the ARRL has only two chances of that, slim and none, unless it is able to fire up the US amateur population politically. The chances of that happening with the current BOD and its policies are also slim and none.

>>
>
>The opinion was that of the FCC issued in the late 1970s and HAS NOT
>CHANGED SINCE..it is NOT just an employee.....read the rules!

I have read the Rules, and searched the Federal Register where
Commission actions must be published. I have found nothing which
prohibits amateur use of telemetry. In fact 97.111(b)(7) specifically
authorizes telemetry. It would appear that neither the Rules nor a
Commission action have prohibited the use of telemetry.

I have also read the opinion of a FCC staff employee which you
posted which states that telemetry is illegal, but with no
justification given for contradicting the clear authorization
of telemetry in 97.111(b)(7). Staff employee opinions are
frequently contradictory, and do not carry the same weight
as the Rules or a formal Commission action. I posed the following
series of questions to another staffer,

1) Is telemetry an authorized one way transmission in the amateur
service?

A) Yes.

2) May an auxillary station operating under automatic control transmit
telemetry?

A) Yes.

3) Is telemetry considered third party communications?

A) No.

Telemetry is *not* third party communications. It is, as defined
in 97.3(a)(42), "a transmission of measurements at a distance from
the measuring instrument". A report of a voltage change from such a
measuring instrument is clearly telemetry. 97.111(b)(7) clearly
authorizes telemetry. And a station operating as an auxillary station
can transmit telemetry, 97.201(e), and it may do so under automatic
control, 97.201(d).

That's a separate issue from third party autopatch activity.
The Rules don't specifically support the use of patches of
any sort, in fact patches are not mentioned at all in the
Rules, nor do the Rules specifically prohibit such activity.
Though 97.113(a)(5) would tend to prohibit their regular use.
And is why I use a cellphone instead of a patch.

That's a grey area of third party communications. FCC staff
interpretations over the years (some contradicting each other)
have built up a body of interpretation about these third party
patch activities. But telemetry is not third party activity.
The Rules say so, and at least one FCC employee says so.

>far too large for my desktop. I've never been able to get past that
>barrier.

Too large? Mighty small desktop there I'd say. No room for a radio
either I guess. Seriously, I don't think the size of the product is
a major issue for most users. When I had one, I just stuck it under
the radio. It had some problems, and it is behind the times now, but
it was a good product in its time.

>Since this subject has surfaced on this and other threads, yours is
>the first to possibly place the fault squarely in the lap of AEA.
>Could it be that rather than economic conditions in the amateur
>market, AEA has failed to meet and exceed customer expectations?

That's what I think. For a company with "Advanced" in their name,
they failed to retain advanced technology leadership. And they didn't
aggressively price their products, a must in the amateur market.

>In the aftermath of AEA, consider a company like MFJ with its mediocre
>reputation for quality and service. Quality nothwithstanding, they have
>a wide product line, good value and even some unique products that I
>would like to own.

Their broad product line, and their very aggressive bottom line
pricing, has kept them a strong competitor in the marketplace.

>PacComm is a good example of a company that is known for
>innovation and high quality. Are they in financial
>dire straits because of the so-called "declining amateur market?"

If anything, PacComm has been too aggressive. They're actually
overwhelmed with business, much of it non-amateur. That has tended

to result in long lags between an amateur product announcement
and actual shipping product because they haven't been able to
free up production lines quickly to make the new products.

>Thank God they've had the foresight to start working on a product
>that addresses the high demand for network speed. I'll be the first
>in line to make a purchase.

Well get out the plastic and give them a call. They are shipping.
You don't need to get in a line. This is the WA4DSY (aka GRAPES)
RF modem that AEA was offered 10 years ago, and which GRAPES has
been selling in kit form since. WA4DSY recently repackaged it for
easier mass production and licensed it to PacComm, and they are
churning them out. You don't have to know how to solder to get
on 56 kb anymore.

>It's a sofware project from hell situation. These are pretty common in
>the computer business.

Well, there's a bit more to it than that. AEA should be credited
with jumping on the DSP bandwagon early, but that cost them dearly.
By being so early to freeze a hardware design, they found themselves
way behind the cost/performance curve in DSP hardware (which is changing
very rapidly). The 2232 will never support the more advanced modes
like PACTOR II. It simply runs out of capacity. And it is much too
expensive for the cost sensitive amateur market.

They also depended on outside programming for the box, and mismanaged
that agreement from what I've heard. That resulted in programmer changes,
with all that that implies in an embedded development situation. That
put them in a nearly hopeless situation with the 2232.

They also clung too fiercely to their bread and butter PK-232,
and its new look PK900 sibling, long after it ceased to be a
competitive product. IMHO they wasted a good deal of resources
on minor updates rather than using those resources to get the
next generation product out the door.

It looked like they were finally going to pull things together
toward the end by starting over with the DSP-232. They readjusted
their sights and brought in a product with a good price/performance
ratio. But apparently they ran out of time/money before it could
be finished and take off in the market.

They tried several times to broaden their product line. Their
ATV transmitter was high quality, but apparently didn't draw
a lot of interest. Their antenna analyzers are nice little boxes,

but MFJ undercuts them very sharply on price. Their Isoloop was innovative, but again MFJ cut them off at the knees with much more aggressive pricing. The amateur market is very price sensitive, and AEA was never able to play that game successfully. MFJ has mastered it well.

If a company can't compete with MFJ on price, they have to bring substantially more technology to the market, and do it quickly. It has to have flash and sizzle which the upscale amateur can't resist. The PK232 had flash and sizzle when it was introduced, but AEA wasn't able to duplicate that with later products. The market passed them by with technology while they were trying.

The PTC-II is one of those oooh and aaah boxes that has the sizzle, and it has the technology. Upscale amateurs look at it, then look at the DSP2232 and there is no contest. The HAL P-38 has the performance, and the aggressive price, that more value conscious amateurs seek. And MFJ serves the bottom line customer. There was no room left for AEA. Frankly, I don't know why there is room left for Kantronics, but they seem to be doing something right.

(I think that's concentrating on non-amateur business. It appears that's where the bulk of their sales are. The KAM+ certainly doesn't have much flash or sizzle, and its technology is practically as stodgy as the PK232.)

>November snowstorm), I suddenly found motivation to look into getting a diesel
>generator.
>
>Follow my thoughts: Gasoline is dangerous, spoils, gums up carbs. A diesel
>engine can burn oil from my oil tank, is pretty safe, and is pretty reliable.

Yes. They aren't maintenance free, however. You need to run them at least
once a month and change the oil frequently.

>I figure that I can put a valve on my oil line from the 200 gallon oil tank, and attach
>fifty feet of fuel line hose. I can mount a 20 or 30 kw genset on a small trailer, and
>when an outage hits, I can pull the genset out of the warm garage with the garden
>tractor, and crank it up in the driveway.

Yeah, but don't try to draw directly off the oil tank. Use your fuel
hose and a transfer pump to keep the genset's onboard tank full. The
worst thing that can happen to a diesel is to get a gulp of air in the
fuel lines. Use a high quality filter in the transfer system too. Diesels
don't like dirt, grit, or dead bugs in their fuel either.

>I saw a 30 kw genset with a Detroit Diesel engine (rebuilt engine, new genset) for
>$5000 delivered (Harbor Freight Tools).
>
>Is this a good idea?
>
>Is this a good deal?

That sounds like a good deal. Harbor Freight is a little dodgy,
but if there is a warranty on the rebuilt engine and on the generator,
it is probably a safe bet. You'll be able to get parts and service
for the US made engine. The generator may be an import. That's something
to check out. The price is aggressive for a Detroit.

>Who makes commercial quality gen sets? Cat? Kohler? Detroit? Can you get one
>of these makes for not a lot of money? Are there any catalog outlets that sell these
>things?

Check your local WW Grainger. They handle a number of brands, including
China Diesel. That's an import, but the Chinese can do cast iron pretty
well, and the price is attractive. Grainger also sells just the generators,
US made, so you can drive them with your own engine. They have a PTO driven
15 kW unit which is very attractive for mounting on a tractor or a 4x4 with
PTO. If your garden tractor has the guts, it might work with this unit just
fine (it needs to be at least 20 hp).

>How many gallons per hour do these things burn?

That depends. If you're loading a 30 kW unit heavily, it'll drink
between 4 and 6 gallons an hour. If you are loading it lightly,
it'll drink much less, 2 gallons an hour or so. (Note, fuel consumption
doesn't scale linearly with generator size, a smaller generator may not
get correspondingly better fuel economy.)

>If you calculate the total load on a genset (120 V * total amps), how much
>overcapacity do you need to handle start up surges, and keep the genset running in
>a reliable fashion? I don't want to tax the genset. I'd rather keep the set loafing
>along under load. We just want to run two fridges, a freezer, two furnaces, a water
>pump, and a couple of lamps.

Well, generators typically have two ratings, continous and surge.
Starting surge is typically 1.5x the continous rating. So a 30 kW
unit should be able to handle a momentary 45 kW surge. Motors started
under load have the highest surge demand. Everything you want to run
except the lamps appears to be high surge. The motors may give a surge
rating on their ID plates, but if not I'd allow 2x the blower's run draw,
3x for the fridges and freezer, and maybe 4x for the water pump as the
surge figures. I'd guess that worst case you need 40 amps surge for
the loads you list. A 30 kW generator is *way* overkill for that sort
of load. It should be able to supply at least 200 amps surge at 220,
output is 220, but you split that in your distribution panel to feed
110 loads. (You need an approved transfer switch. Don't go Mickey
Mouse here, do it right, hire an electrician.)

There's nothing wrong with having a generator way larger than you need,
but you can probably save some money by scaling back some. A 15 kW would
be more than sufficient, and a 7.5 kW would certainly do. There are some
economies of scale, so going with a big generator may still make sense.
And you'll be able to run almost every load in the house at once.

3731. CA License Plate Problems

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-15 00:00:00 UTC
From: jbennett@ebmud.com
Message-ID: <591o0q$cg0@lal.interserv.com>
Source record: 209998

Fellow Amateurs:

Sorry for using the bandwidth, and for posting to this newsgroup, but I'm not sure how else to get this done (I don't have packet capabilities). If you are not a ham living in California, go ahead & delete this note & read your other postings -:)

We here in CA are allowed to have our call letters on our license plates. That's the good news. The bad news is that DMV will not allow us to have anything other than the plain old red, white, & blue plate format. Sure, not all of us want our call letters on our license plate. Further, not all of us that do are interested in paying the extra for a specialized plate, like the Lake Tahoe plate, the Yosemite plate, etc. But... some of us are willing to pay a bit extra for a spiffy looking plate with our call on it.

I applied for a Tahoe plate by mail and the application was denied. Went to a local DMV office and the clerk tried to force it into the system but was unable to do so. She asked her supervisor and was told that they can't ensure that our call isn't already being used by someone else on a plate. What a lame excuse. Joe Nonham can walk in and get a Lake Tahoe plate with JCBER99 - no problem. The computer programming checks this combination and if valid, allows it. Why not for us?? I know several other local hams that have also tried and failed. I don't give up very easily----->

I've written a letter (snail mail) to the new director of the DMV, explaining the situation and asking for her to look into getting this changed. One ham requesting a change probably isn't going to have much effect. However, if we can get the CA ham community to ask for a change en mass, we might have a chance. Even if you aren't interested in plunking down the $$ for a special plate, think about helping the cause.

What can you do? Below is the name and address of the DMV Director. Please get out your word processor or pen & paper and write a short note to her asking for the rule to be changed. A big hearty THANKS in advance for your taking the time and using a 32 cent stamp to help take on the DMV about this bone-headed restriction!!! Pleeeze write to:

>far as I can tell, will only direct the received audio from the side

My understanding, though I have not tested it, is that the transmit
side as selected by the bandsel will take whatever is coming in on the
pkt connector. You can feed the speaker of the passive side receive
in on the mic line in the packet connecter, perhaps.

I'm trying to receive packet on one side for APRS while using the
other side for a phone QSO, and my info is that I must feed the audio
out of the speaker to the TNC, and not use the output of the pkt
connector, as that will have the audio from the active side on it. OF
course, I will not be able to transmit pkt in this configuration.

I for one am tired of seeing all the "CW is outdated" , "No phone, etc." posts. While I agree that this is of course an issue that lots of people are interested in, perhaps it would be better for those involved to email each other personally instead of just extensively quoting the last 20 or so posts. Then they could make a digest of it and post the relevent parts to the newsgroup.
Simply stated if you are going to continue calling each other names and saying this one is stupid for this reason or that one is stupid for this reason then please do so in individual email. Not in the newsgroup.
Any flames should be directed to my email address :
insight@cris.com

I've owned one for quite a while. It's a great little radio,
I use it mobile and portable, but it hasn't displaced my regular
home station rig. The thing that makes it so attractive is its
size. That makes it excellent for mobile and portable use, and
you learn to adapt to its deficiencies accordingly.

Now my home station rig is a IC-735, and an early one of those
at that. So I'm not comparing the IC-706 to one of the new
wonder rigs (mostly I wonder who'd pay that much). My main
complaint with the IC-706 for use at home is receiver overloading.
It happens a lot with a good antenna. The IC-735 doesn't have
the problem. Otherwise the little radio is acceptable for most
of what I do. And when used mobile or portable with the typical
inefficient antenna, the overloading isn't much of a bother
either. I'm keeping it.

Well let me say I hate, hate, hate, code. I think it stinks. I would have been a ham long ago if it was not for code.

BUT

It has a purpose, I now have general and will get an advanced. It is a trial by fire. I cannot remember the code I learned last week. I still think it needs to be. No-code tech has it's place, a good time for all while learning the theory of radio operation.

BUT

When your backs against the wall, with a wire, transistor and crystal, as slow as I am I can send a message around the world in an emergency. That's amatuer, we are the emergency communication back-up for the world. Communication is our business.

I recently saw Independance Day and in the movie the Hams of the world sent in code the attack plans to destroy the ememy.

I use to feel code was a punisment, because the old guys had to do it they punished us.

Think of code as a club we know it while the rest of the world just waits for us to give them the meaning. We have the power, you need to learn to use it.

Ferrite loading on a coax also creates a large *longitudinal* lumped impedance for the center lead that is almost identical to that on the braid. This basic principle is used in coaxial baluns and is easy to demonstrate. The center lead is not "isolated" from longitudinal things that are happening on the braid, not even on the "outside" of the braid. This longitudinal loading can be effective down to very low frequencies with the right kind of ferrite. For lightning protection the ferrites would be "bodacious" for sure, but not extremely so.

I understand that PolyPhaser sells coax "absorbers" and I think also isolation transformer devices, do they not?

The idea of *bonding* the antenna system to the operating environment and creating a ground loop scares the hell out of me. Do we really want to do that? Isn't *isolation* a lot better if we can do it?

I don't mean to be merely argumentative, but some of the things I am seeing about this lightning protection problem bother me. I have copied and read PolyPhaser's web site material, but questions remain.

HAMFEST/COMPUTERFEST CALENDAR 1996/97 - NORTHERN ILLINOIS *
last updated December 8, 1996 |

o Please report additions or changes to Bob Parnass,
AJ9S, office phone: (630)979-5414, electronic mail:
parnass@bell-labs.com. Thanks to Dennis Dale and ARRL
for providing some of the information.

JANUARY 1997

Jan 12 (Sun), Waukesha, WI - 25th Annual Midwinter Swapfest. |
Waukesha County EXPO Center, Waukesha, WI. West Allis Radio
Amateur Club (WARAC) 8:00 AM $3.00/$4.00. Amateur Exams.
Ham Radio. Computer. Electronics. For Information Contact
WARAC Swapfest, PO Box 1072, Milwaukee, WI, 53201 or Phil
Gural, W9NAW, tel (414)425-3649.

Jan 19 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

Jan 26 (Sun) - Villa Park, IL - Wheaton Community Radio |
Amateurs Mid Winter Hamfest - '97 at the Odeum Exposition |
Center 1033 N. Villa Ave., Villa Park, IL. Doors open at |
08:00 till 14:00

FEBRUARY 1997

Feb 16 (Sun), Rock Island, IL - Davenport ARC. Contact Don
Schneider, WD0AMA, (310)-388-0108. email
dschneir@saunix.sau.edu

Feb 23 (Sun) - Computer Central, College of DuPage (see
notes at the end of this article).

FEBRUARY 1997

Mar 9 (Sun), Waukesha, WI - SE Wisconsin FM Amateur Repeater
Society Swapfest, Waukesha County Expo Center Arena. Exit
294 on I-94 west, then south on C.T. 'J'. Talk-in 146.820
MHz. Contact Jim Lazachek, KF9GG, tel (414)650-0724.

MARCH 1997

Mar 9 (Sun) - Waukesha, WI. SEWFARS Swapfest. Waukesha
County EXPO Center, Waukesha, WI 8:00 AM Talk-in on 146.820
pl 127.3 $4.00/$5.00 Ham Radio. Computers. Electronics. Ama-

teur License Exams. For information Contact SEWFARS, PO Box 102, Delafield, WI 53018. 414-650-0724

March 23 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. VEC testing. For Information contact LAMARSFEST, 650 Green Bay RD, Lake Bluff, IL 60044.

APRIL 1997

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zancha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds. Free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

Jun 8 (Sun) Six Meter Club of Chicago. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Contact Joe Gutwein, WA9IRJ, (630)963-4922.

JULY 1997

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc. (RARA) Amateur Radio and Computer Hamfest. Winnebago County Fairgrounds, about 15 minutes west of Rockford, Il. Talk in on 146.61 MHz, 114.8 Hz PL. This will be in the main exhibition hall with room for tables. Ham Radio Vendors, Computer parts vendors, tailgating, food. Code receiving contest, Throw the Radio contest, Great door prizes. For table reservations contact Mike Anderson at (815)397-4304 or mander5@ix3.ix.netcom.com. For any other information contact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com.

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal * Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tail-

gate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Aug 24 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Contact Bob Grosse, N9KXG. Info (voice/fax) (708)658-1678. http://www.angelfire.com/il/tcrg/

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

Giant Computer shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $5. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123.

: Keith Martin - KF6DEE

Second the motion. This proposal has a lot in its favor:

It gives those who could care less about CW, phone privileges consistent
with their ability to pass only written tests.

It also preserves a place for those who still use CW, or would be interested
in doing so.

I like the dual-ladder approach.

This is about the best compromise I've seen so far. Can't complain about
this one, but I'm sure someone else will be able to.

Carl has a back problem for which he had surgery. At the time of the surgery there were a number of insults directed at his medical problem. While I admit that his style is baiting I don't really understand the hate directed at him. OTOH Len's postings that I have read seem logical orderly just simply anti code testing. For this he is rewarded with stupid nicknames and insults about his age. What is interesting is after all the fuss made about Carl's spelling/typos by the procode crowd one of their own gets a little flack for a grammatical slip they go nuts. If it look like a hypocrite and it talks like a hypocrite what might it be?

I am looking for a very good PC Logging-program for the HF bands. At this moment i just started with a unregistered version of Log-EQF. I consider to register to this program, to use al the facillities of this program, such as the WAS, Prefix and DXCC modules, but a friend-amateur attended me to the
DXbase logprogram (Scientific Solutions) as a very good and comprhensive logging and DX-logging program.

Before i start to enter the logs of the qso's i already made into a logprogram in my PC, i want to make the right choice for a good program, otherwise i have to re-enter my logs into another programs. So who can give me some advise and tips about good and priceworthy loggingprograms and about DXBase ?

I suggest you peruse the early issues of QST and see what hams were
doing back then. They were yacking and gaming on wavelengths others
felt were useless. The hams proved them wrong. As a result, at
every international radio conference, special measures were taken
to ensure the protection of hams, with the US fighting the hardest
for the preservation of ham radio.*

Lots of radio history books at your local university library will
explain the early days of amateur radio to you, and why we're still
here today (Thank-you, ARRL!!).

* From Schroeder: "By 1927 a number of new services were demanding
consideration for their needs. Most conspicuous among these were
broadcasting and aeronautical, with fixed servies and amateur also
requesting frequency bands. That amateurs were not excluded completely
from the short waves they had been instrumental in opening up was due
to the energetic support of their position by the American delegation,
as a result of which the allocation table specified amateur frequencies
at 160, 80, 40, and 20 meters." (It's truly amazing we still exist
when you realize intense demands for the limited spectrum at that time.)

Talked to an OT today who received his ticket in 1928. He said there were just two questions on his exam:
1. Draw the schematic diagram of a complete amateur station, labeling all component values.
2. State the purpose of each component within the circuit.

He said it took him 8 hours to complete that exam. Then he had to take the code test from a government landline code operator. The problem there was that the LL op only knew Continental Morse!

I don't choose to ignore 'facts'.

But the 'fact' is that I think it has been well documented that your definition
of the word 'fact' conflicts with some other popular definitions.

The above paragraph, describing wonder- modulation techniques I don't
assume to be a 'fact' until I can open up the AES catalog and buy one.

So at this point, I am convinced that your definition of 'fact' may well be
what some people would call 'opinion'.

But let me recall one part of what you said and comment on it again. You
said:

>communications in conditions where CW signals cannot even begin to be
>heard at all, let alone copied by ear.

Take a minute to read this Carl, forget about all the name calling and the
balony that goes on here every day. Think about it. And maybe you will
see why you and I don't agree on much about ham radio and probably
never will.

Here's where and why you and I have differing opinions. You are interested
in efficiency. I am interested in Magic. For the last three months, I have
been thinking about how to make an antenna for 160 meters that would work
good enuff to work the U.S. (7000 miles away) and at the same time be installed
in a very limited amount of space. Then one day something happened to
make me stop thinking and start doing (what isn't important). So I got a roll

of wire, some coax, started scrounging around and climbing up and down from the roof trying to figure out how to get a sky hook 65' up in the air. (I don't have a tower, and I don't have any trees). So I put up a big tall mast. And it fell over. Guam's Biggest Ubolt. So I put up a bigger, better, taller mast, and it didn't fall over. Then I went down the road in my truck to the Jungle Hardware Store and I cut down a 60 foot tall bamboo tree and drug it up the road home on the back of my truck. I dug a hole and planted the bamboo pole in the back yard. I cut the wire for the antenna, soldered it together, cut the wire for the radials, and ran the radials all over the yard and down into the jungle. I came into the house, I checked the SWR, I went back outside, took down the antenna, did some adjustments, and came back in and checked the SWR again. I continued until the antenna was resonant on the frequency I wanted it to be resonant on. Then I warmed up the amp, tuned it up, turned on the keyer, and waited for it to get dark to see what I could work.

When it got around sunset, I put on the headphones, tuned up and down the band - and - MAGIC. I heard a bunch of signals from North America. Not S9, not S5, not S3, but way down in the noise. Sometimes I had to listen for a few minutes to figure out the callsign of the station I was hearing. I stayed up until 2 am (here) when the sun had risen on the west coast of the U.S. and when I was finished, my log contained the calls of 17 stations I had never worked before on 160 meters. A few in Russia, a few in Japan, and some in the U.S. Some were so far down in the noise they had to send their call eight or ten times before I was sure I had it right. Since that night a week or so ago I have worked seventy or eighty other stations on 160 meters. Other than the JA's nobody is very strong. It took me fifteen minutes to work FK8CP in New Caledonia last nite - he heard me calling CQ and I was so weak he couldn't figure out my call. He was 339 here, and I had to have him send his call and my report over and over and over. I couldn't have worked him on SSB, I couldn't have worked him on FM, I couldn't have worked him on Pakit, RTTY, AMTOR, CLOVER, or anything that is available to me as a ham with the exception of CW and Morse code.

Anyway, here's my point. You want a box that copies signals down in the noise that no human can hear. I don't. No Magic. I designed my 160 meter antenna, I figured out how to hang it up and tune it, and I put on the headphones and sent the code and copied the signals to make the contacts. The project required ME to be succesful. A digital hi tek whizzer box that copies signals down in the noise that I can't hear is, in my opinion, BORING. It doesn't require an OPERATOR, moreless ME. No Magic. No desire required. No skills required. Plug in the box. It does the rest. No Magic. Sure, your below the noise floor digital whizzer box, if you hooked it to your radio and connected to Gary's digital whizzer box could send the Wall Street Journal in it's entirety a hell of lot faster than I could send it to KX4R in Georgia on 160 meter CW. But no Magic. I'll guarantee you that when I worked KX4R on 160 meter CW last nite, there was PLENTY of Magic - on both ends.

You have a tendency to accuse everyone who uses Morse code on the ham bands of being 'old farts' who aren't interested in learning anything about the new modern digital technology that's available. Not so. I tried 'your' way of ham radio. I hooked up the modems, I put up the satellite antennas, I built

the stand alone antenna tracking computer and interfaced it with the rotors. I set up the computer software, I put in all the keps, and then I sat and waited for the satellites to come over the horizon. The satellite came over the horizon, the computer went BEEP (sorry), the antennas started turning, the radio started transmitting, the lites on the modems started blinking, and the data came down from the satellite. When the pass was over, the computer waited for the next satellite, the antennas went back to the park position and the radio stopped transmitting. Which all would have happened without me in the shack. No operator required. No Magic. I will admit I had a little fun

putting all the junk together to make it work, but the minute it started working I realized the fun was over. No Magic.

Sometimes, Carl, when I read what you write, in between all your insults, your baloney, your silly reasons for dropping CW testing, I slip, and I think I feel that you really believe all the digital below the noise floor high data rate stuff you are constantly telling us about is something wonderful, and that you think we are missing something by not experiencing it.

And sometimes I feel sorry for you. Ham radio is Magic. But you'll never feel that Magic. Because the Magic doesn't come in a box. You have to go find it. And I don't think you ever will.

By posing such a question you advertise to everyone that you're not
a person who knows how to research the answers to important questions.
As a teacher, I should reply "Look it up" but it's apparent you wouldn't
know where to look, so I'll give you a hint as to how to begin your
search: Telecommunication Convention and Final Protocol, Geneva,
Artical 50, Paragraph 290. (Because you're comments are mean, I'll
leave it to you to determine the year of said conference. Heehee!)

>Imagine the military if they could come up on, let's say, your
>TV while the superbowl was on or some other one of your favorite
>shows. That is the same thing.

As I said, they choose to be good spectral neighbors; it would not be
in their best interest to offend other users of the spectrum.

>>At Coast Guard Radio Honolulu we brought our 10kW transmitters up on
>>20m many times in various situations. We were well within our power to
>>do so. Don't lose sleep over it, Greg.

>Don't think so. I think you just got lucky that no one reported it.

Heehee. To whom? The FCC? Military comms do not fall under control of
of the FCC nor the CFRs. They answer to the DoD.

You seem to believe the amateur bands are sacred and off limits to others.
Try listening to the international broadcasters on 40m in the evenings;
you'll even hear our own Voice of America buried in there.

Watch your blood pressure, Greg,
Jeff KH2PZ

I regret that my example was needlessly controversial and allows you to jump onto a soap box to defend the existence of `natural rights'. I don't agree with you and I see a belief in natural rights as more to do with religion than science. I respect your spiritual beliefs and I refuse to debate them here. This discussion was on the semantics of a particular word and I would like to keep it that way.

Regardless of whether or not you believe in the existence of inherent inalienable rights, the proper use of the word `right' itself is simply NOT limited in English-English or in American-English to only those rights. Surely you are familiar with a `right of way' and a `right of first refusal'. There are countless other examples of man made rights without trespassing into religion. Do you believe that stockholder rights are inalienable or simply a misuse of the word?

I defy you to find any adult dictionary in which the definition of that word excludes all rights which you and I can agree are certainly created by men as being fully proper uses of the word.

All my best to you and your over the holidays.

Did I misunderstand it? It seems to me that it FORBIDS the use of CW
to those without morse code qualifications. If I'm wrong please
correct me. But if I'm right, please justify this.

At present Tech's have full access to CW both in the exclusive CW sub-
bands on 6m and 2m, and indeed everywhere else above 30 MHz. Why now
start to exclude them from this mode? What's the point?

For those who may be interested, here's a little info on the
funeral for George/W7MB held this past Saturday.

Subject:W7MB's funeral - very nice

The funeral was very, very nice and well attended.
About half the people (maybemore) there were Hams
including some fellows who had travelled a few hundred
kilometers to get there.

Stan/W7NI was the "master of ceremonies" and did a great job ... although
it was very difficult job not to become emotional. Nels/W7EYE read a
poem he had written in George's honor .... also very emotional.
No dry eyes anywhere.

At the front/center of the church, was kind of a table with a large
bouquet of flowers from Helen together with three items:

1) A photograph of a very smiling George seated in the red T-bird
car of Stan/W7NI which was taken at the NW DX Convention last July.
It is truly a great photo.

2) George's original 5BDXCC plaque.

3) George's #1 Honor Roll plaque.

To each side of the front/center table were the various flower arrangements.

Much of the ceremony included info about George's Ham career including:
first 160M DXCC from W7; first 5BDXCC from W7; very top of the Honor Roll
with 383 countries ... only two other hams in the world have that many
countries. All of George's achievements were done from a small city lot
with a modest station.

There were also several slide/photographs of George as a child, young man,
father, grandfather ... and as a ham. George selected many of the photos
to be shown. Not surprisingly there were at least 10 photos of the various
yagi antennas that he has had over the years. One kind of surprising
thing was the music that was played. George had selected a very old
"jazz" style recording to play ... it was called "CQ Serenade" and was
obviously, about ham radio. That made most of us smile, and even laugh.

There were probably 70 or 80 hams or so in attendance. Although I never
really did count. It really was very nice and Helen was obviously very,
very happy that so many of George's friends were able to come and/or to
show their respect for him by sending flowers, letters, phone calls, etc.

Afterwards, there was a very nice "reception" which included lots and lots of very delicious food prepared by his family. Lots of stories about George and, of course, not a few stories about DXing in general. George would have loved that, you know.

Warmest 73,
Sandy W7BX (ex-WA6BXH)

>discourage the technical types ...

History has shown that it does not discourage the technical types.
Most of the smartest people I've known in Ham Radio are Advanced
and Extra Class license holders.

That being said, there will always be "genuises" who don't quite
make it. I've known several brilliant people who

a) Dropped out of college because they didn't take tests well.
b) Never got their PhD becauuse they couldn't pass the written
qualifying exam.
c) Got their ABD degree (All But Dissertation).

A genius who really wants to be a ham, however, will not be
stopped by a Morse code exam. If he/she is stopped, then there was
not very much desire there (barring a medical problem).

>>bad

>No, Steve ... not a snob ... just someone who knows what ham radio is
>supposed to be about ... something that obviously excaped *you* ...

Part 97 states that, among other things, the basis and purpose of
Amateur Radio is

(a) Recognition and enhancement of the value of the amateur service
to the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.

(c) Encouragement and improvement of the amateur service through
rules which provide for advancing skills in both the communications
and technical phases of the art.

(d) Expansion of the existing reservoir within the amateur radio
service of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to
enhance international goodwill.

Items (a) and (e) have virtually no correlation with one's technical
ability. Items (c) and (d) could apply to those operators who have
proven superior/competent operating ability, either through DXing or
contesting.

As much as you may dislike the concept, the "yackers, beepers,
and gamers" are fulfilling the *official* definition of "what ham
radio is supposed to be about", just as much as you are.

As you and I both know (being technical professionals), there
are many pompous individuals out there who will always

feel that whatever they're doing is the only worthwhile thing, and
that everyone else is incompetent or inferior. I have a feeling
that you're not really like that, so let's not be so presumptuous
as to label and judge other amateur's activities as "not worthwhile".

I would seriously consider a FT-530...used slightly you can find plenty for 250-350$ and they take a lickin and keep on ticking. THey also have just about any option you might need for emergency comms.

The Coast Guard is one of the armed forces. Day-to-day comms
fall under the DoT, but when ordered by the President, the USCG
becomes a branch of the US Navy (DoD). Thus, CG comm regs must parallel
those of the Navy.

>I have spoken to Coast Guard stations on 20 meters before
>but they had amateur callsigns; Coast Guard Auxilliary stations. If
>you brought up 10kW transmitters on 20m Jeff, you were more than
>likely violating international treaty.

See, for example, Telecommunication Convention and Final Protocol,
Geneva, Article 47, paragraph 290. The ITU does not want to have
anything to do with regulating member nations' military comms. The
above specifically allows member nations to regulate their own military
comms: "Members ... retain their entire freedom with regard to
military installations of their army, naval, and air forces."

You know, we have a group of hams to do this on the air here in Phoenix, Az. They are called "the loose cannon's". They spout all kinds of foul language, talk about taboo subjects (like sexual acts, etc) on the air! These guys even blame someone else when they interfered with! I wonder why? I come on here expecting a more mature crowd, and its C.B. radio and "loose cannon's" all over again.

I know I might be belaboring the point a bit, but I have found that those who use excessively foul laguage are often intellectually immature, and quite often inept. So, I'll let you children play.

Mery Christmas....

If someone is altruistic enough to devote their life to conducting
said research for the benefit of amateur radio, lack of a license
shouldn't stop them. They could go to any radio club and find a
licensed volunteer to be present during such on the air tests.

Besides, I don't believe that all propagation studies in the history
of radio were conducted *only* on the amateur HF bands, Carl.

> That leaves rules/regulations, and possibly a test in operating an average
> Amateur transceiver.

I asked a simple question. Still haven't seen an answer from anyone
from either side.

The theory content of the written exams is still quite relevant and
necessary because privleges the amateur license extends. A U.S. amateur
license permits one to build, modify, and experiment with equipment that
can be put on the air in an international radios service.

So if we just test for rules and regs - OK. Then manufacturers can
start building ype accpeted equipment for those who possess a new
"no-theory" license. They would not be able to perform any internal
repairs, adjustments, or modifications to their type accepted
equipment.
Why not? I understand that Canada has a license class with similar
restrictions. Though I don't have first hand knowledge of Canada's
licnese structure or the content of their tests.

But written testing and code testing are separate issues. They are
separate tests. A change in the code testing requirement does not
necessarily mean that we have to change the written exams a bit. But we
can talk about that too - if thats' what you really want.

The pro-code rhetoric about eliminating the theory tests may turn out to be a lesson in being careful what you wish for.

Never said it was perfect idea. Some fine tuning could change the Class
I (or whatever you want to call it) to allow some HF privleges. Perhaps
the system could be changed so that a code test is an "endorsement" that
you could add to any class of license.

It is probably a good idea to have HF available to the first license
class. I'll fic that before I write my petition.

> : : Class III= Class II prerequisite. A written test that is equivalant to

> Why not 10 wpm? That is about where many Hams get stuck - those that learned
> each character by its elements (dits/dahs) - rather than the overall sound of
> the character.

The idea here was simply to retain a code test. I intentionally
proposed it at 5 wpm so that nobody would get "stuck" trying to increase
code speed to gain privleges. Increasing code proficiency is not part
of the incentive in this porposal.

Right now them minimum speed for access to HF is considered 5 wpm in the
U.S. so I used that as the minimum as well.

You can only communication in real time as fast as your typing speed.
On the average, that's about twice what one can do on code. So what's
the big deal? Can someone build rigs using these new modes from scratch
on their bench? If not, why are you advocating use of equipment that's
out of reach of the homebrewers? You scold the amateur community for
not being technical enough, yet by wanting "new things that will blow
away all of that stuff..." you're removing the lower rungs of that
homebrew ladder. Bad boy.

3781. Re: FT-570D

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-16 00:00:00 UTC
From: Rick Lapp <rickl@unix.asb.com>
Message-ID: <E2I6n7.4u3@nonexistent.com>
Source record: 209905
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap,rec.radio.amateur.misc

These are my Impressions of the TS-570 after a day or two at the controls. My thanks to Joe, W2HPM who also spent some time with me reviewing this new Kenwood.

I'm comparing the radio based on others I have owned: 940, 765, 850, Omni6, 450, 50, Delta2, and a 706. I've also operated the FT-1000 enough to compare it to the others.

The radio was setup by removing all the connectors from the 450 and simply plugging them into the 570. Only the CW jack changed from a "phone jack to an 1/8" mini which was quickly fixed with an adapter. The amplifier keying and PK232 interface all worked exactly as they did on the 450.

The LCD display reminds me most of the IC-728. The numbers are large and easy to read. The backlight is adjustable via a menu selection. The meter is a nice compromise between an analog movement and a bargraph, since the LCD segments are laid out in a radius, resembling an analog movement. This is a simultaneous
S meter, power level, SWR, Compression level and ALC. It looks like the audio level function in the 450 was left out of the 570 meter. The peak hold function works well. (2 segments remain at the peak level for about .5 secs.)

The front panel is well laid out. It's exactly the same size as the 450 but MUCH easier to operate. The location of each of the buttons has been well thought out for operator convenience or efficient contest operation. The buttons are rounded rubber, not the squared off plastic and metal ones on the 450 and 850 and 940. The buttons are divided into groups depending on function. Each one of these groups has a different shape and feel - a nice touch for the sightless or sleepy contest operator who has his eyes on the monitor and only his left hand on the controls. The buttons work easily and don't take much effort. This was annoying to me on the 706, Delta2 and Omni6 which take entirely too much pressure to make contact. This is an important point for contestors.

Joe pointed out that a "reminder" LED was missing from functions like notch (beat canceler and noise blanker) although the LCD segments for these functions are of good size and difficult to miss.

The receiver was compared side by side to my 450. Without doing extensive lab tests with a signal generator, it's seems that the receiver is somewhat more sensitive yet quieter from phase noise. I didn't seem to need the pre-amp in situations where I needed it with the 450. The Noise Blanker seemed effective to pulsing noise and compared to the 450, did not cause the usual distortion on strong signals or strong adjacent signals.

IF shift control works well and I'm please to see it with a center detent, like the 450. I tend to leave mine a few degrees off center which seems to emphasize the lows of a SSB signal, making the signal sound "full".

The memory channel selector knob doubles as a menu selection control. The following functions are not controlled by the menus but can be individually controlled with this "multi" knob: mic gain, pwr level, keyer speed, vox/break-in delay, and bandwidth selector.

The menu function is extensive, yet fairly easy to use. It is similar to the 450 and 850 but has an alpha numeric scrolling display describing the function so you don't need to constantly refer to the manual. We were able to set and control most of the menu driven functions for the first time without referring to the manual.

The DSP function is in both the transmit and receive audio circuits, not in the IF like some of the other radios currently on the market. There are advantages and disadvantages to both techniques and Kenwood has chosen to put it in the AF. I think this was good choice, although I haven't compared it to an IF DSP radio. The complaints I've heard about transmit and receive audio distortion in the 870, appear to be non existent in the 570. Both transmit and receive audio are clean and non-distorted. Even with the DSP beat canceler or DSP Noise Reducer functions on, receive audio is still clean, although it is possible to hear a hint that the audio is being "processed". There is no comparison though to the distortion introduced in the audio through the low end Radio Shack DSP unit. There are two NR selections. NR1 and NR2. One is used normally for SSB and the other for CW. These tend to reduce background "hiss" and is a separate function from the Beat Cancel which works well on SSB. Kenwood could have had the NR1 and NR2 functions automatically selected depending on mode selected, SSB or CW. I don't know why they didn't do this. I'm mostly a CW operator and the NR2 works well but may not be that pleasing to listen to while copying CW at over 40 WPM. There is just a hint of rising edge distortion as the DSP does it's work. What is impressive however, is the "hiss" reduction with the NR function enabled. The receiver is

almost completely quiet except for the desired signal. It would be interesting to compare this DSP with one of the high end external DSP units. The Beat canceler does a fine job of eliminating heterodynes on SSB and does not add any objectionable distortion to the received audio.

The CW tuning is cute, but I'm not sure how often I'd use it. Perhaps new operators or contestors would find more use for it than I would. I suppose my ear has enough training and experience where I don't see that it's necessary. It is not as precise as I thought it would be as it usually comes within 10 or 20 Hz of the correct frequency depending on signal strength, QRM or keying speed.

I installed the 8Mhz, 500Hz CW filter in my radio. It appears that there is only one spot for this additional filter - I would not be able to install a 1.8Khz filter with my CW filter installed. I don't see this as a problem since a combination of the DSP slope tuning and the IF shift does an adequate job.

On CW, the IF filtering works well. There is a filter bandwidth control that controls the DSP AF bandwidth. The DSP bandwidth is variable from 2.0Khz to 1.0Khz, 600 Hz, 400, 300, 200,100 and 50 Hz! The resulting combination of 500 Hz IF filter and DSP AF filtering reminds me of the Jones Filter arrangement that Ten-Tec put in their Delta2 transceiver which was continuously variable from wide down to less than 100 Hz. I found it difficult to find a crowded portion of the band where the 570's IF and DSP AF filtering could not effectively knock out adjacent interference. Compared to my 450 which had both 8Mhz and 455Khz, 500Hz CW filters, the 570 seemed to be cleaner with less "ringing" while copying CW at narrow filter settings.

The automatic antenna tuner seems to do a good job of matching the radio on any band to my 80 meter dipole fed with ladder line through a 4:1 balun, although the 450 never had a problem either. The "AT Tune" function is different than on the 850 and 450. Kenwood saved the "Auto/Thru" button and put both functions on one button. Depressing the "AT Tune" button toggles the tuner on or off. Holding it down for longer than a second, starts the tuning cycle. The tuner sounds much different than previous Kenwoods. Rather than hearing the whirring of a motor, it sounds more like a relay chattering. It took some getting used to. I'm curious what they did different with the tuner that makes it sound like this. The tuner, like previous radios, memorizes settings for each band.

On Pactor, Amtor and RTTY, the radio performed well. The variable bandwidth of the DSP filter is a nice feature when

operating on the digital modes to knock out any adjacent frequency QRM. On transmit, I was able to operate at 100 Watts key down on long FEC and Baudot transmissions with no temperature excessive rise. The radio seems to handle this 100% duty cycle operation. A nice feature for the digital modes are menu selections to vary BOTH the audio input and output from and to the TNC.

On CW, the 570, in my opinion, is the best Kenwood yet that I've operated. My criteria for CW operation is mainly how smooth the transmit to receive transition is, how smooth the sidetone sounds and any audible noise or clicks from either the speaker or relays while on QSK or semi-QSK. The amplifier keying relay is easily enabled or disabled via a menu selection and with this relay disabled, the radio is very smooth and quiet in QSK. During QSK, you have to strain to hear a small, perhaps reed relay. I heard very little, to no difference in another receiver while switching between semi-QSK and full break in while sending a string of dits at 50+ WPM. This is a test that Joe and I usually run to see how good the QSK operation is and essentially duplicates the CW dual trace scope photo you see in the QST rig reviews. On QSK, I would rate the 570 second only to the Ten-Tec Omni 6 for silky smooth QSK operation and nice sounding CW on receive.

Although the AF output stages are spec'd at 1.5 Watts for the 450 and 570, the 570 seemed to have somewhat less audio drive into my external speaker than the 450. It's not a problem since I never seem to run the audio gain up less than 10 or 11 o'clock . The audio quality on SSB and AM was clean and comparable to the 450.

We ran a number of transmit audio tests on 75 meter LSB. Using a Radio Shack Highball mic, the consensus was that "High Boost" transmit audio equalization, and the mic gain at 40, seemed to work best. A half dozen critical ears on the frequency preferred the 570 over the 450 for transmit audio quality.

You apparently don't live near the coast. Out here in the Pacific I
still hear LOTS of CW on 500 kc, and the 4,6,8,12, and 16 MHz maritime
bands. (22 MHz is of course dead.)

Sorry Bill, but to prove a claim is false, all one needs do is provide
a single counterexample. Carl claimed hams of Latin American countries
are folks of means. That a pretty sweeping generalization. When 10m
finally opens up I'll get the name and call of a poor Latin American
ham who only has a homebrew CW station. Stay tuned.

I've gotten some e-mail saying I was incorrect in saying we use the Continental Morse Code today--that it's the International Morse Code. Both are correct. The Continental Morse code is also called the International. These are being confused with the American Morse Code. My 1991 ARRL code proficiency certificate calls it the Continental Code. Also, please check out the following site. 73.

Well, speaking as one who has operated primarily RTTY, AMTOR, and
PACTOR for the past ten years, let me say that I don't care for your
patronizing tone. However, if it makes you feel good to nit-pick
others, go right ahead.

Incidentally, if you are going to nit pick, at least do it
intelligently. Where does it say that we can't operate RTTY,
for example, on 14.250?

What I meant, and what anyone but an idiot would have known that
I meant, is that band segments such as 14.000 to 14.060, where
no one (no one Gary, not even you) runs anything but CW, can
stay that way until hell freezes over, as far as I'm concerned.
Even if we do dump the CW requirement soon, as now seems likely.

By all means, let's keep the CW ops off our 14.065-and up
digital frequencies. Pisses me off when they come up there during
these too-frequent contests.

Scott:
It's a rugged rig, a bit on the heavy side though. Beware if you use the collapsible whip antenna, as it's quite a load on the BNC connector. Minus side: it's a BITCH to program. Make sure you get the manual for the 6 mtr rig, as the early ones were sent out with the manual for the 10m ht. Call Azden and they should send you out the 6mtr manual no charge (they did for me).

: We've got to get the word out that this is a scam and that license
: renewal is FREE except for the cost of one 32 cent stamp.

For the last time, it isn't a scam! Fred points out in his letter that
goes out with it that you are free to use the ENCLOSED 610 form to renew
directly, and tells you how to do it. You can use his service, for a fee,
or do it yourself. As they say, if nobody uses the "pay" service, it will
probably go away, but my guess is that there will always be people willing
to pay, go figure.... I just received the package from him for one of my
club calls I am trustee for, unfortunately the renewal documents wouldn't
work, and I needed to send in a 610A directly, I'm surprised his system
didn't pick up on that....

What would a "Tickle Me Elmer" doll look like?

Old, wrinkled, probably lacking in personal hygene. When you squeeze his pot belly, he "beeps" to you in Morse Code about his health problems and how much better things were back in the days when he had to ride the bus 500 miles to the nearest FCC office to take his ham license exam.

I would submit that the answer is YES. Understanding how to build and
operate ham radio equipment is a MUST. More so for HF than any other
band. Ground loops and other poor installation problems will lead to
increased RFI. This will lead to more complaints to the FCC. More
complaints will result in rule changes. Many changes for the worst.

In either case the exam needs to show how well any one person
understands what is going on.

I have recently come to own a previously used antenna tower. After months of hard work, I managed to finally get it out of the ground. That was the hard part. But here is the fun part. Anybody have any ideas how I can dig a hole in the ground that is about 2.5ft in diameter and about 6.5ft deep? I tried a post hole digger, but the bits are only about 4 ft deep? Any suggestions?

Thank you in advance.

Don't hold your breath. Carl is very big on fabricating..numbers, lies,
falsehoods and untruths. The only real numbers he holds dear are the
$$$$ signs he will see when he and his types turn the Amateur radio
service into a play for pay service..IE: wireless T-1 lines to surf the
internet. There is one of the great ideas of all times. I suppose Mr.
moneybags will allow free access to his computer so that all can surf at
no charge.

Actually, the ARRL is required by law to publish on a regular basis,
their publication figures (usually in one of the issues) It will show
total copies printed, subscriptions figures, over the counter figures,
etc.

As to advertsing rates, call, write fax. I am sure someone will help you

Don't rely on Carl for much of anything except insults and his constant
wimpering that he is SO superior to all and that he is a second class
citizen (in fact, probably the only truth in most of his postings)

Amateur radio is about people..all types of people. It's a great hiobby
that affords many the opportunity to do what they want. It's this
premise that upsets Carl the most. He feels that unless you play his
techno reindeer games, you have NO business being licensed..hence his
many cb'ers who beep comments.

Hang in there. Have fun

WW II POWs seemed to have been an innovative bunch. For instance, I recall my father, a POW (Stalag
VIIA) telling of "crystal sets" being built with Gilette blue razor blades. Presumably transmitters
were also constructed. Some first learnt their radio theory as POWs. Do we have any ex-POWs who can
share their war time "wireless" experiences?

Very well said. As an added note, folks studying the bead and choke type
solutions should also note that we are dealing with the added attraction of
this RF problem that makes for HOT SPOTS during the strike! If you
tear up a coax line and look at it after a hit, you'll likely find burned places
at odd intervals that, at first may prompt you to ask, "Why are these here?"

I'm told that the answer is that the RF pulse, during it's existence, produces
standing waves all over the circuit. These burned places are the CURRENT
nodes in the circuit where there is no obvious arc-over. Where curious
insulation rupture has occured where it otherwise has no explanation, such as
mid-way down a cable inside the cable, it seems the insulation may have
failed in a voltage break-down mode at a voltage node.

Your comment on the differences that the inner and outer leads in the coax offer should come much clearer looking at the above to others reading this although you likely have thought this out as well. Your're darned good.

As you say, the bulk of the energy is down below 2Mhz. As I understand the whole deal, the more or less center frequency of the oscillation usually starts out much lower than 2Mhz, then rises as the time stretchs out until the path collapses when the energy to support it fails. Because it varies as widely as it does, chokes, coils of coax and even tuned stubs that have been tried as suppressors, all tend to offer more problems than they solve.

I don't know the math behind it, but in that the bulk of the energy is down below the 2Mhz point, it appears that is part of the answer to why there is a focal length of about 150-175 feet around the strike wherein energy radiates outward much like a rolling ball or a splash of a water when you throw an object in a pond. It is the reason we are advised NOT to bond the coax down leads to the tower on the way down, unless the line run along the tower exceeds 175 feet or so in length. We are dealing with the roughly quarter wave current-voltage reversal in the major time-domain of the pulse at the heaviest part of the hit, as I see it.

This also helps explain, as I understand the stuff, why one often sees crazy situations in a house where one light switch will be blown to bits when another one in a more obvious place that seems to be a better target, survives! It also helps to explain why some things in your nice pile of goodies get blasted and others survive!

To my view, it isn't just a case of, ahem, strike and mash bondage here. :)

It's selective torture for the unitiated and unprotected..

More a case of stand and deliver instead of just lay down and be quiet!

The secret, as you rightly say, I think, is still never let-em in the door!

:)

David,

Contact your local utilities company. They often have drilling rigs to put down telephone/light poles. I use one from a private electrical contractor. Please be careful on your "new to you" tower. Contact the manufacturer for proper guying procedures/anchor specs. Please inspect it very carefully for rust, corrosion, etc. Check inside tubes if not solid rod. Update life insurance policy!

It bothers Polyphasor folks also, done the wrong way and for the wrong reasons as I read their material. When you consider that the ground loop problem has an average quarter wave length of about 150-175 feet or so during the heaviest inital phase of the strike, you begin to see why current and voltage nodes are also in the puzzle! As I believe what I have read of their book, that is one reason you do NOT bond coax to the tower in the down run, unless the run exceeds 150-175 feet in length.

Ground loops take on a completely different view when they are viewed as part of a 175 foot wavelength mechanism with tens of thousands of amperes of RF current. Recall also that the wavelength decreases as the strike progresses in time. If part of the circuit is blown away during the initial hit, what happens then?

Right?

A recent poster mentioned that he's willing to accommodate novices or tech+ operators at slow code rates, but a "ham-fisted general" (I think were his words) would be ignored.

So - I got my tech+ 4 weeks ago, just upgraded to Advanced, and figured I'd go for Extra fairly soon (passed the written already). Unfortunately, I have no HF rig and have never conducted a CW QSO. I'd sure like to, though. While I can *receive* code fast enough to pass the 13 wpm test, I'm sure that, when I first touch a key, I'll be totally "ham-fisted". Does this mean I'll be ignored by the upper ranks simply because I advanced before I'd worked code?

I'd like to suggest to you more experienced CW operators that there are many paths to competence, but all of 'em start at slow CW speeds. I may have more than the usual electronics theory under my belt than the typical beginner, and maybe I whacked my way through the tapes to pass the 13 wpm code, but cut me some slack. I'll still need patience when I first try my hand at CW.

(Of course, I plan to start on the novice bands with the usual novice power limitations. When I find the cash for an HF rig.)

PolyPhaser says:

1) Make sure the tower is well grounded.

2) This achieves a much lower (not zero) potential at the base of the
tower.

3) Connect the braid to the base of the tower.

4) This reduces the voltage level on the coax, as compared to letting it
float or connecting to the tower at a greater height.

5) Then the 1/4 wave common-mode (braid) cable length helps, as you say,
to create a high common-mode impedance at the dominant frequency of 1 or
2 MHz.

6) My suggestion: *augment* this 1/4 wave effect with ferrite loading to
reduce ground loop impedances at other higher frequencies. This might
greatly reduce the hot spot problems that you mentioned.

7) Follow up at the equipment site with iso-couplers, spark gaps, etc.

8) Any approach is susceptible to failure if the event is strong enough.
It is possible to be more conservative than is necessary in any kind of
situation involving risk.

This sunday, 12-22-96, on the nationally syndicated
Ham Radio & More Show, it's your chance to call in,
toll-free, and voice your reasons why CW needs to
remain a requirement for a General and above ham
license. You'll have up to 90 UNINTERRUPTED seconds
to tell the world why you believe what you do. Even
the host will not comment. So many of the posts here are
about the code and are written and thought out so well,
now is your chance to tell the world. Prepare in advance,
and be ready to say it all within 90 seconds.
The toll-free number is 1-800-293-5366, and that line will
be available 10 minutes before the show starts this sunday.
Below is more information about the show.
Len Winkler, KB7LPW lenwink@goodnet.com
P.O. Box 9219 kb7lpw@kc7y.az.usa.na
Phoenix, AZ. 85068-9219 ARIZONA ARRL PIC

Ham Radio & More Show info at:
http://www.goodnet.com/~lenwink/hrm.htm
http://www.tapr.org/hrm (RealAudio site to hear past shows) (Thanks TAPR)

The Ham Radio & More Show airs LIVE each Sunday at 6:00pm ET,
(2300utc), on many local commercial stations throughout the country.
ALSO: LIVE on WWCR Shortwave, 5.070mhz.
ALSO: LIVE on RealAudio at: http://www.AudioNet.com/radio/business/kbnp (Thanks KBNP)

Also available tape delayed via WWCR Shortwave on Mondays,
at 1000utc on 3.210mhz, and Sundays at 0600utc on 5.070mhz.

Support "WOG", the Written Only General!
WOG info at http://www.goodnet.com/~lenwink/wog.htm

>Jack

Ouch. Actually, the Crouch couple that runs TBN look a little too much like Jim and Tammy Faye for my taste. As a member of a small evangelical church, all of the flashy clothes and big hair, the expensive background sets constructed for TV, all of that turns the stomach of people in small churches engaged in real ministry. The only time I stop on TBN is while channel surfing - and only when I see a show by someone that really has something worthwhile to hear. Much of what is on TBN is from normal evangelical broadcasting that uses it as an outlet. The "Big Hair" stuff is the straight TBN produced stuff.

Any of several solutions come to mind. The folks that dig septic
tanks have equipment to dig holes like what you describe. They are
usually quite reasonable. Any good backhoe service would be able to
dig it for you. The folks who dig piers for house foundations also
are able to move dirt.

I had a tower base dug, and the cost was only about $50 from scratch.
On another job, where the machinery was already present for another purpose,
it was a "freebie".

Good luck es 73 de W5GFE

<snip>

when i lived in rural south jersey, my friends and i had a "secret
frequency" we used for simplex chattering. i'd moniter that and the local
repeater. well, a year ago i moved to philadelphia and some of my old
friends were going to meet me in the city. i said "i'll be on the old
secret frequency." well, wouldn't you know it, when i turned on the
radio, someone _else_ was using the simplex frequency. after a while one
of my friends came on, called for me and i said "let's move up 40khz and
i'll catch you there", well, amazingly enough, there was someone on
that simplex frequency too. after that, i started looking for simplex
frequencies, just leaving my radio on all the time tuned to a frequency,
and i've _yet_ to find one that people don't talk on from time to time.
it's quite a jump from rural new jersey to metropolitin whatever.

1st Congrats for your dedication and hard work. Enjpy all that your
license holds. But to answer you question..other than those here, how
would the average ham know you advanced by your first CW contact??
Spelling mistakes??? speed?? There are quite a few operators, as has
been mentioned, that use their key for nothing other than a paperweight
after passing the test. If you're nervous about your first contact, let
me know and I'll be happy to sked with you. I am sure that there are
many many others willing to do the honors as well.

Good luck Bob Lyons and WELL DONE

BTW as to your subject..NEVER EVER EVER is advancement (in anything) a
mistake if hard work and effort is put into it. (excluding illegal
activities of course)

Well, Morse Code was just one of several things important to the ID4 plot. Several other things were important to saving Earth, such as:

* A captured alien space ship from Roswell.

* A fighter pilot that learns how to fly a captured alien space ship in about 30 seconds.

* A completely drunken crop-duster pilot that figures out how to fly an F/A-18 in 30 seconds and operate the sophisticated weapon systems, too.

* A cable TV technician that cracks the communications and computer technology of the aliens and writes a bug-free virus, all in a few hours.

* It was amusing that the gate sentries at Area 51 would let anyone in that just happened to have an alien in their pickup truck, particularly with a hundred RVs full of rednecks in tow.

In other words, Independence Day was a fictional movie. It was made up. It has as much to do with Morse code as Star Trek: Generations has to do with the current space shuttle.

I don't think it makes a good statement to cite a ridiculously contrived fictional movie as an example of the utility of Morse code.

Well, they'd probably recognize the 2x2 callsign I hope to have in a
few days as coming from an Advanced licensee. That'll seem rather odd
in conjunction with the keying and spelling mistakes. :)

> If you're nervous about your first contact, let

Sure, I'll be nervous on my first contact, but I recognize how helpful
most people in amateur radio really are. My posting really was directed
at the original poster (the unknown guy who disdained CW-illiterate
Advanced licensees), to remind him that he needs to encourage us, not
avoid us.

> I can highly recommend Prolog from Datamatrix. It is an excellent program with outstanding tech support. No I do not work for the company. Check the ARRL web page and look under software. The info to obtain a demo program is there.

I purchased the program and could not get the data interface to my Yaesu FT-757GX2 to function. I was called at home, they had me download some new software for the Yaesu, and talked me in over the phone to make sure everything was up running.

Check out Prolog, it works and you want find any better tech support.

Actually Cecil, somehow the attribution got mixed up on someone's
posting and incorrectly credited me for saying that. This isn't the
first time that has happened, nor will it be the last. I have heard of
people being comitted to the hobby but none that comitted.

Keith,

One problem......there are valid reasons that have been discussed for having a cw requirement. So.....I would still say call the license anything you want but "No CW, No HF".

My opinion,

ARRL Bulletin 96 ARLB096
From ARRL Headquarters
Newington CT December 16, 1996
To all radio amateurs

SB QST ARL ARLB096
ARLB096 League ''heartily supports'' FCC proposal to ease
international operating

In comments filed in response to an FCC proposal that would make it easier for visiting foreign hams to temporarily operate in the US, the ARRL ''heartily supports'' the plan, but suggests some changes. Earlier this year, the FCC proposed amending the Amateur Radio rules to make it easier for hams holding a European Conference of Postal and Telecommunications Administrations (CEPT) radio-amateur license or an International Amateur Radio Permit (IARP) from certain countries in the Americas to operate during short visits to the US.

If finally approved, hams would be able to operate for short periods in participating countries without first obtaining another license or permit from the host country. The arrangement would make it easier for US hams to operate stations temporarily in several countries in Europe, Central and South America. Likewise, hams from those countries would be allowed to operate in stations in places where the FCC regulates ham radio.

The principal change recommended by the ARRL involved the length of time CEPT or IARP holders would be allowed to operate in the US. The FCC had proposed extending operating authority for ''up to 180 days within the preceding five years.'' In its comments, the League called the limitation ''unnecessarily restrictive,'' and suggested a CEPT license or an IARP ''be valid for use by the holder for a period up to one year'' from the date of arrival in the US but not beyond the expiration date of the ham license issued by the visitor's home country.

The two classes of CEPT licenses would correspond either to Amateur Extra or Technician class. Resident aliens or US citizens could not operate in the US under a CEPT license or IARP.

In 1995, the ARRL petitioned the FCC to implement the CITEL/Amateur Convention. The League also asked the Commission to acknowledge arrangements to be made between the ARRL and the Department of State to issue IARP documents to US citizens for use in other CITEL countries. The FCC also has asked the State Department to apply for participation in the CEPT Agreement as a non-CEPT country.

SB QST @ ARL $ARLB095
ARLB095 TAPR Digital Directory

ZCZC AG75
QST de W1AW
ARRL Bulletin 95 ARLB095
From ARRL Headquarters
Newington CT December 16, 1996
To all radio amateurs

SB QST ARL ARLB095
ARLB095 TAPR Digital Directory

With the support of the ARRL, the Tucson Amateur Packet Radio Corporation (TAPR) will begin providing at the TAPR Internet site the information on digital systems that formerly appeared in the annual ARRL Repeater Directory. The digital directory information will be available at http://www.tapr.org/directory. Information on digital systems will not be published in the 1997-98 edition of the Repeater Directory, permitting the publication to better focus on its primary use as a guide to voice repeaters for traveling amateurs.

In planning the 1997-98 edition, the ARRL concluded that the Repeater Directory was no longer the most effective medium for this information. Discussions involving various regional digital groups that provide data to the digital section of the Repeater Directory led to the conclusion that TAPR was the logical group to take on the task of a new North American Digital System Directory.

This new database system will describe systems used by Amateur Radio stations involved in digital communications in United States, Canada, and Mexico. The Digital System Directory will be based on information provided by regional, state, and local organizations as well as individuals, in a nearly real-time format. This should allow information to be maintained and updated more frequently than in a yearly publication. TAPR will also work with participating organizations to make this information available on TAPR's yearly CD-ROM as well as some future publication for local/regional groups to distribute.

The purpose of the Digital System Directory is not to manage, coordinate, or regulate the usage of digital systems, but to provide the most up-to-date and accurate listing of digital systems that can be provided. Neither is it a formal organization, but a mechanism to

allow regional groups to provide and share information regarding digital systems.

The Digital System Directory is intended for use by individuals to further their enjoyment of the hobby, and by organizations to help plan and develop digital networks.

Regional/Local groups have already begun to participate in the process. These groups include TwinsLAN, Texas Packet Radio Society, Miami Valley FM Association, Ohio Area Repeater Council, Puget Sound AR TCP/IP Group, Northern California Packet Association, Northern Illinois Packet Radio Frequency Council, Indiana Digital Experimenters Association, Central Lakeshore Experimenter's Digital Organization, HogNet Packet Radio Association, YCCC Sysops Association and the Missouri Amateur Packet Radio Society. TAPR encourages other regional groups to support this project by contributing data from their respective areas.

For further information on the project and how to get involved, regional groups should check http://www.tapr.org/directory or send e-mail to Carl Estey at wa0cqg@tapr.org.

Look up the words in your dictionary if you are unsure of their
meaning. A dictionary is a useful reference tool.

> In contradiction to Christensen's
> assertion, I do not agree with his view that the relative lack of
> interference from the amateur service is due to supposed superiority of the
> equipment. More to the point, that amateur's have to submit to a written
> examination would tend to make those individuals more aware of their
> responsibilities.

Let us turn the proverbial table: what evidence can you conclusively
present to one and
all that the relative lack of interference is *not* due to technological
advances?

> >A knowledge of the allowable spectrum is essential.
>
> Although it is a non-sequitur to the previous statement, I couldn't agree
> more either.

Knowledge, yes. Testing, no. A non-non-sequitur.

> I am pleased that Christensen has seen the light, in that that is exactly my
> thesis.

Then let it be known to one and all: Jim Cummings advocates a written
examination whereby
only "interference avoidance" questions are presented.

> > Because to learn any
> > more then *absolutely necessary* to avoid interference starts to smell of hypocracy. In
> > fact, it parallels the same reasoning for continued Morse testing.
>
> Firstly, what is meant by "learn(ing) any more then (sic) is absolutely
> necessary"?
^^^^^^
Allow me to rephrase: "Because *testing* any more than absolutely
necessary begins
to smell of hypocrisy."

Incidentally Jim, as long as we're grading each other's grammar, the
punctuation

always falls within the quotation marks. Always.

Ummm, I think the Canadian way is the way to go (just like healthcare ;)

no code license: bands above 50 Mhz all modes
5 wpm qual+ no code license: for certain bands below 50 Mhz
12 wpm qual+ no code license: for all bands

advanced license: bands above 50 Mhz all modes, priviledge to build transmitter, and greater permissible power
output
5 wpm qual+ advanced license: for certain bands below 50 Mhz
12 wpm qual+ advanced license: for all bands

everybody seems happy up here ;)

Emile.

>1/2 of "barefoot" power would do just fine ... who needs to be "60
>over"? ... folks who run "60 over" should be fined ...

It's already in part 97 that power output shall be kept to the minimum needed
to maintain communication. A blanket condemnation of every "60 over" signal
makes no sense. A "60 over" signal can quickly turn to less than S1, or even
disappear completely.

>I'm not saying that everyone has to be an EE ... but I do believe that

The question should be; Why aren't there MORE HAMS on the rec.radio.cb newsgroup?

After all, the CB is where MOST of us got our start. Wouldn't it be a wonderful thing to join our comrads in
radio in discussing any and all methods in improving our hobbies?

Let's help each other gain the goals we all have in our communications!

I just moved to a High Rise Apartment building and have very little area to set up in. I have my computer about 5' away from my Kenwood R1000. Cant run both at the same time because the computer just about blanks out the receiver. What can I do? I have grounded both the radio and computer. Seems to have narrowed down the interferance to the computers power supply and fans I think. When I put my radio out in the kitchen about 30' away still get the interferance. Any Ideas? I would really like to run both at the same time since I just ordered a TNC.

THanks

Rich

David, This is a very uncommon size hole for a tower. Most guyed towers are set in this size hole, but not this deep. Most self supporting towers are set in much larger holes depending on the height. Most larger towers use 4 holes about this size, one for each leg. It would help if you state what type tower you are putting up and the antennas you plan to put on it.

I had to call a pier drilling truck (they also set poles for the utility company). They charge anywhere from $60 to $100 per hour from the time they leave their shop. They can dig a hole like this in 30 minutes in normal soil or a couple of hours of so in rock. It cost me $480 for 8 hours to dig my antenna holes in rock. There were four 18 inch x 5 1/2 ft and 1 30 inch x 4 1/2 foot plus a 9 inch x 9 foot trying to get through the rock for a ground rod, but it never came out the other side. Good Luck.

> hard part. But here is the fun part. Anybody have any ideas how I can dig

I think you'd set a new QRPP record with that.

Have they ever had a contest that attempts to simulate this sort of situation?
Each contestant would start out with a specified box of parts to make a
minimal transmitter, big multipliers for distance your signal is heard, and
even bigger for getting on the air quickly.

I suppose it could be a special category at Field Day.

Logistics of running such a contest would be horrendous, but this vision of
whipping together a transmitter out of spare parts and getting the message
through with it is so pervasive here, that I am sure such a contest would
be very popular.

Source record: 209768

the main theory with the ham lic scheme is that operators should know
and have technical knowledge for the type of transmission, area of band
that they are gong to operated in, and for what they are going to be doing.

A person, lets say , who is going to be operating on 2 meters, should,
have
a understanding of the band plan, understanding of rules and regulation,
an understanding of the things you say and the things you dont say.
Should this
person wish to just operated on 2 meters , voice only, then perhaps a basic

ticket (what we have here up in canada) shoud do. The whole idea of a lic,
says
that this person is qualified and knowledge enough to properly operate in
this part of
the spectrum. For those who believe in the morse code requirement as a sort
of discipline
or dues requirement for being allowed on the bands, well to them, that is
the old way of thought.

Once upon a time, amateur radio was the only means of talking around the
world, for those of
us who have the interest to meet, exchange, and discuss various types of
life and culture.
Today however, there is the internet, its cheaper than amateur, it touches
a far more
people than amateur radio, and it is increasing in size at a pace that
amateur radio could
never dream of. Therefore, giving the options, shall I learn morse code,
or shall I surf for $19.90
a month, which option would you take.

so dont make things too difficult, and stop being a bunch of grumpy old
men, or your just
ended up being stuff into a place and forgoten about , along with the
hobby, a thing of the
past...

You can rent a small (very small) backhoe or trencher and dig the
proper hole. Alternatively, see if you can catch someone in your area
that is having some septic, sewer, drive, or other excavation done and
offer the guy running the equipment some cash to dig your hole.

>>public attention time and time again. How can you ignore these
>>testimonials?

I have some understanding of the value and methods of PR
and I have no doubt that some (perhaps many) non hams
might be totally fasinated with a CW set-up on field day
or at some other set-up. Having said that, I still see no
relationship between the PR value at such events and the
NEED to continue CW testing.

Once again, that is the issue. If CW has value in some
repsects for PR work, then fine. Use it in any way
you want...BUT doing so in no way enhances or
otherwise justifies the continued need to test all HF
hams for CW proficiency.

And, once again, if CW testing ended today, it would not
foreclose anyone using CW for any purpose...PR,
DX, contacting poor foriegn hams or any other
reason.

I suspect that a PAC isn't so much needed when lobbying
for regulatory changes as opposed to either legislative action
and/or endorsments of actual candidates. The PAC is
usually focused on supporting candidtaes as opposed to endorsing
legislation.

>professionally made. Sorry but you really have to get on the CW bands
>to understand the CW environment, and you said you work a lot of CW
>Cecil...perhaps the propagation in California is a lot different than
>it is here in North Carolina..

And, therefore, if such low power, poor stations exist in any numbers
than many will VOLUNTARILY continue to use CW to contact
them. Seems to me that many people should be happy to see
fewer CW knowledgable people on HF which would lower the
number of people who pile-up for those "rare" CW contacts.

TO QUOTE A FOOL..."so we're getting totally ripped off on membership".

OK then Carl, take the gun from your head, and cancel your subscription. BUT PUT A SOCK IN IT for cripes sakes. I've never seen someone who complains about so much do so little about anything. IF THE ARRL ISN"T FOR YOU, why do you still belong. IF QST SUCKS SO MUCH, why do still subscribe?

There is nothing stopping you from WASTING your precious $30 bucks EXCEPT YOU. IF all is actually as bad as you make it out to be (again, look at the source code), why do you still do it.?? You're like the guy who hits himself in the head with a 2x4 constantly. When asked why he does it, his reply..."WELLL GOLLYYYY..IT FEELS SO GOOD WHEN I STOPS!!!"

YOU AND BURT...trolling for comments. Come to think of it..has anyone ever seen Burt and Carl in the same place??? makes you wonder

My experience been as this guy who says he ignores those with 'bad fist'
is a small minority. I find raising another live human on CW consistently
easier than I do on VHF or UHF FM in the SF area or on SSB. Though Santa
is sending me a new amplifier, so maybe when I go up to 600 watts I'll have
better luck on SSB.

I've seen this written down anywhere, but it seems to me that 100 W output
just doesn't cut it on 80/40/20 meter SSB.

Also, lately, I've actually
found some groups on 80M where I wasn't either ignored or verbally abused.
Has HF been toning down a bit lately? It doesn't seem all as bad as I
remember or as people complain here.

hi gary
i am using an old pwr-supply for driving lamps, motors, etc.
the 'power-good'-signal is an output i think; he tell's the watchdog of the computer to protect the memory from writing if power fail's. this is 'cause the cpu makes bullshit when power is not stable.
i never had problem's with unused power-lines, even if you have, don't use a transistor, use a simple resistor (try a 50R, 1W).

BUT: The output of a computer-power-supply (a switching-power-supply) is extremly noisy!!!
this is why i use it for lamps etc, remember that computer work's digital; if you use the supply for analog gear, you will have problem's.

on the other side, there exist's switching-power-supply's for ham-radio too. they work with frequencies higher than you can hear and they have much filtering-parts.

so - if you want use your power-supply - no problem, but don't be surprised about the 'side-effects'...

have fun...

Bob,
I think you have run across an anomaly in the realm of amateur radio. If you get a chance to listen between 7.100 - 7.150 you will hear every class of callsign operating CW. I love operating down there. Being somebody's first CW contact to me, is like working the rarest DX. Don't let anyone B.S. you. I and many other experienced (not necessarily higher classed!) HAMS will be happy to work you. See you on the air.

THE COMPLETE RF TECHNICIAN'S HANDBOOK

(Published by Howard W. Sams, Inc.)

"The Complete RF Technician's Handbook" is THE book for the radio communication s beginner, student, or experienced technician, and supplies priceless information on not only wireless fundamentals, but also the advanced concepts vital to a successful career in RF communications.

Included are over 400 informative ILLUSTRATIONS and tables

The handbook includes everything a technician needs to know in real-world RF electronics -- from the fundamental concepts to the more advanced explanations of modern ANALOG and DIGITAL RADIO circuits and modulation methods. Furthermore, operational instructions on RF TEST EQUIPMENT, as well as identifying proper and improper signal waveforms, and AM, FM, PM, and SSB theory are included. In addition, transmitter and receiver testing methods and TROUBLESHOOTING TECHNIQUES are solidly covered.

For Sale:

I have a Icom IC-736 for sale. I bought it in the end
of October 1996. This rig is as new, has maby 2 hrs use.

The IC-736 is a general coverage transceiver from 30 KC
to 30 MHz, Also has 6 meters. Has built-in Antenna Tunner
and 110 Power Supply. It is All-Mode, SSB, AM, FM, & CW.
I have shipping box, power cord, hand mic and book.

I paid $1700.00 for it but will sell for $1450.00

Thanks,
Boyd

> Don W6IQ

I haven't seen any valid reasons for a cw requirement for HF. Not one, except maybe: "I had to do it, so let's make others do it to."

Here are some reasons for not having one:

1. CW is just about never used for disaster communications, or indeed any non-recreational communication. Ships have abandoned it, the Coast Guard has abandoned it, MARS has actually BANNED CW. CW is strictly a recreational mode. It's a quaint skill, but of no more intrinsic value than smoke signals and other low-tech communications methods. Hey, why not require hams to know flag signals? After all, some ships still may use those, unlike CW.

Someone posted a pathetic defense of CW by citing the movie Independence Day. Yeah, we hams are right in there with the drunken crop dusters.

2. The CW requirement is starving our hobby of new HF hams. The statistics are out. The CW requirement is preventing people from upgrading to General and above. This causes ham radio companies like AEA to go out of business for lack of customers. This same lack of new blood has and will result in our hobby loosing clout in Washington.

3. The quality of the no-code Techs is high. These people by and large are FB ops, who add to our hobby. There is no rational basis for a CW requirement on HF. I'm an extra class ham, but I freely admit that I know many no-code Techs who contribute more to the hobby, via their participation in disaster communications, civic events, etc., than I do.

"200, 221 whatever it takes." - Micheal Keetan in Mr. Mom.

Double the voltage, reduces current by half.

Half the voltage, double the current required.

All consumes the same amount of power in the end.

True. It was never a formal exam. Only an application with fee was
necessary.
A "test" booklet accompanied the license but was not returned to the
Commission.
I still have my original FCC "test" booklet and license from 1969.

I haven't heard anyone else mention this. Here I am looking at the SF Bay repeater map on page 146. It shows a map of the SF Bay, and a list of repeaters. Unfortunately, there's nothing to indicate where on the map the repeaters are located. What's the point? Seems to me this would be really useful if there were little dots and lines showing where the repeaters were. But the way it is in the 95/96 directory, I have a list of repeaters that's already in the No. California section and a lores map of the SF Bay.

I'd reccomend, for the next atlas, to show where the repeaters are.

***** FREEDOM ALERT ***** FREEDOM ALERT ***** FREEDOM ALERT *****

RADIO FREEDOM
http://www.ftcnet.com/~freedom

Insightful commentary and thought provoking news

Radio Freedom is the first interactive computer-only radio station broadcasting primarily on the Internet and designed strictly for freedom loving people everywhere.

Radio Freedom is an alternative to the main stream media! Finally, get the facts the liberal media has ignored for over 50 years.

Radio Freedom will be available in _Real Time_ using Real Audio(tm) and both the 28.8 and 14.4 formats will be available. More information on how to set-up Real Audio for your computer can be found on the Freedom-Site.

Radio Freedom broadcasts every Friday at http://www.ftcnet.com/~freedom and is mirrored across North America via 3 Bulletin Board Systems (BBS's).

At present their are 4 full time hosts and several part time hosts.

The four full time hosts are:

* Paul Fromm:
Toronto teacher, award winning writer and publisher of 3 monthly newsletters including the Free Speech Monitor, C-FAR newsletter and the Canadian Immigration Hotline. Mr. Fromm has been instrumental in fighting to expand the Canadian Charter of Rights guarantees with respect to Freedom of Speech and Freedom of the Press.

* Kevin Alfred Strom
Controversial American who hosts one of the most successful Shortwave Radio Shows ever called American Dissident Voices. Mr. Strom is part of the National Alliance in the United States. His shows are always controversial and VERY thought-provoking!

* Joy Berke:
Relative newcomer on the scene. She is a prolific writer and is currently the host of the Heritage Hotline, the weekly voice of the Heritage Front which is arguably Canada's largest Pro-White group. Interesting messages and very thought provoking commentary.

* Christopher Saunders:
Christopher has the "dubious" distinction of running the first Racialist/Freedom of Speech BBS in Canada. Everyone from the Canadian Chiefs of Police to various Special Interest groups have

called his BBS, Politically Incorrect, a "Hate" center in Canada.
Listen and make up your own mind about this interesting individual.

Radio Freedom will also be hosted by various part-time hosts. These
individuals will be announced as they come up. Keep an eye on the
Freedom-Site for all current information.
(http://www.ftcnet.com/~freedom/new.html)

Radio Freedom and the Freedom-Site can be reached at
http://www.ftcnet.com/~freedom and will be immediately mirrored at:

EXCUSE ME???? Can to share where you got this piece of pie??? AEA went
out of business cause they failed to market their products and
themselves, period. The majority of their equipment was packet. Since
whne is HF packet that big a deal?? Seems to me that packet systems
spend most of their operational lives on the VHF+ frequencies (home of
the NOCODE TECHS).

>

Again, the rational in realtime is that morse code is required by the ITU. Besides, most of what you mention above is usually carried on the VHF+ bands (NOCODE TECH). And they do a wonderful job, but they are mainly appliance operators and therefore do not fit into the New World Order of the ARS as per WA6VSE.

>any one mode as being more crude than another.

I'd suggest you don't know what crude is if your only measure
of it is the length of time it has been used in some form. Facial
expressions and body posture form a body language which is more
subtle and refined than many types of verbal or mechanical means
of communications, yet it predates even spoken language. OTOH,
grunts predate spoken language too, but they *are* a crude method
of communications. Length of use alone is not a measure of whether
a method is crude or elegant.

An elegant communications system is as transparent to the user as
possible, not intruding on the content or flow of communications
any more than necessary. That's what makes voice communications so
attractive. It closely approximates face to face contact. Not only
does it convey ordinary language, text can do that too, but it also
conveys inflection and nuances which are missing from cold text. It
is a richer communications method. If we add to that the very dense
information content of the visual system, a picture is worth a
thousand words, we have a communications system which even more
closely approximates face to face communications, and can convey
gesture and body language as well as the nuances of speech. That's
why TV is so powerful.

When we look at a scale from grunts to a symphony, or from shadow
pictures to full blown HDTV, we can see a general trend from crudity
to an elegant simulation of face to face reality. That trend is
dominated by the volume of information communicated per second.
The more closely the channel can convey a virtual reality "you
are there" experience, the less crude it is. OOK Morse is the

crudest form of wireless communications because it conveys the least amount of information, and in the least transparent manner, of any of the methods in current use by amateurs.

The communications method we are using now is also crude, but not nearly so crude as OOK Morse. With this method, we are able to convey complex ideas in an expedient manner. In the couple of minutes I've been typing this, we couldn't have exchanged the first paragraph above via manual Morse. Morse contacts are content limited by the slow speed at which Morse can be operated. Most modern digital text systems are much faster.

That slowness is primarily a hinderance at the operator interfaces. It isn't important that this message reach you in realtime. It is more important that it took me only moments to write, and should take you only moments to read and understand. It is operator time which is precious, not system time, in this case. The cruder system wastes too much of the operator's time. Even in realtime cases, every other non-relay method of text transmission in amateur use is faster than OOK Morse.

For most methods of communications amateurs employ, the channel capacity forms the information bottleneck. But for manual Morse, the bottleneck occurs at the operator/equipment interface. Mechanically, we could send 1000 WPM Morse over the channels available to us, but the operators at each end couldn't interpret it. That's because manual Morse exploits a very limited subset of the information capacity of the auditory channel of a human, IE we can simultaneously handle information in the auditory channel spanning from 20 to 20,000 Hertz, but OOK Morse linits us to a single frequency at a time. We can handle a range of dynamics from the faintest whisper to the roar of a jet, but OOK only exploits two levels in that range. Listening to a symphony is an example of fully exploiting the human auditory channel. We simultaneously process and understand a wide range of inputs with an information content approaching that putative 1,000 WPM Morse when we listen to a symphony.

Speech more fully exploits this human capacity than does Morse. That's why most of us can understand 300 WPM speech with only a small amount of practice, yet we haven't a chance of doing 300 WPM Morse, no matter how long or hard we practice. (Normal conversational speech is in the range of 120 to 200 WPM depending on the region of the US in which we were raised, but we can train ourselves to understand faster speech with relatively little effort.) But we are limited by communications channels to a span of 300 to 3,000 Hertz for speech transmission, so we remain communications channel bottlenecked rather than operator bottlenecked for speech Q.

The human visual system has an even higher bandwidth (remember that "one picture is worth a thousand words" maxim). Even HDTV doesn't fully exploit the human visual capacity. HDTV is still bottlenecked by the allowed communications channel from approaching what the human system can handle. This human channel has a capacity equivalent to millions of

words per minute, but we can only transmit information at a Q roughly equivalent to 30,000 words a minute per second with our TV systems. The visual system is also communications channel bottlenecked. Of the methods in use, only OOK Morse is bottlenecked by human limitations in the system.

WPM/sec is an important Q metric for a communications method. There are others. As I noted, the ability to convey information transparently is another Q metric which Morse fails badly. Even compared to other text methods, Morse is crude. YOU ARE ALWAYS SHOUTING IN MORSE. And other symbolic nuances are also more difficult to convey succinctly because Morse doesn't have the full range of symbols needed to do so. But lets leave the realm of content and look at other metrics of interest.

Morse is often touted as the method which gets through when all others fail. Of course that's false. There are other methods which get through when Morse can't even be heard. Operating at a very low Eb/No is a Q metric for various communications modes too. Morse does much better here than it does on the WPM/sec metric. All the analog methods perform poorly on this metric. Only digital methods do well. But there are a number of digital methods which do much better than crude on-off keying with a variable length code. In current amateur practice, PACTOR II reigns supreme here, but several of the lesser digital modes can also handily beat OOK Morse. There is also considerable room for improvement over current best amateur practices in this arena for modulations and codes *other* than manual OOK Morse. The latter is limited by biology, and isn't as amenable to improvement, IE no matter how much you practice, you can't decode what you can't hear, or comprehend what is exceeding the capacity of the particular man/machine interface.

OOK Morse is also often touted as the best way to pack the maximum number of QSOs into a finite bandwidth. But that is false as well. I illustrated this recently with a posting on the policy group where I described a system which can simultaneously pack over 40,000 20 WPM equivalent QSOs into an amount of spectrum which can only support 800 (non-contending) OOK Morse 20 WPM QSOs. The described system is well within the current amateur SOTA. It would not be overly complex or expensive to implement, yet it offers a packing density Q more than 50 times greater than OOK Morse can support.

The described system does not approach the Shannon limit, there are even better ways which are possible (and some of them, also within amateur SOTA reach, offer several advantages over the method I described), but the method I described has the advantage that it requires no rules changes to be implemented today. All it requires is that a sufficient number of amateurs embrace it.

The final claim for OOK Morse is that it is the *simplest* method of communications. This claim is dubious at best because it neglects several factors. Most obvious is that it neglects the *receiver*. The receiver required to effectively exploit OOK Morse is no less complex than the receiver for most of the other methods of radio communications. It is more complex than the receiver required for some other methods. A second factor is that the OOK transmitter is only trivially different from the FSK or FM transmitter, yet these other types of transmitter can be used for higher Q encodings than Morse, and offer up to a 6 db advantage in weak signal conditions over the OOK modulated transmitter. OOK Morse has no real RF hardware simplicity advantage over other methods.

The simplicity argument really boils down to the idea that the encoder and decoder for OOK Morse have no complexity or cost, but that the encoders and decoders of other methods are complex and costly. This is also false. In fact, manual OOK Morse requires the most complex, most poorly understood, and least well characterized encoder and decoder of all. Even the most elaborate VLSI system is simplicity itself compared to the neural complexity of the wetware modem and its programming. The hardware system has a lower acquisition cost as well. All material costs boil down to the number of manhours required to be expended to gain the desired item. The wetware modem has the highest manhour cost of acquisition of any modem we might use in amateur radio (and delivers practically the lowest performance of any modem we might choose to use too).

>
>You must visit the 3rd world drug production countries. None
>of that exists in Viet Nam or Cambodia, or a hundred other
>countries.

I guess you haven't been to Ho Chi Minh City recently. Since normalization, those 4x4s are beginning to show up on the road alongside their much older (and once olive drab) siblings, as well as competing for road space with their Japanese cousins. Throughout Central and South America (with the notable exception of Cuba, which must get along with 1950s versions), those two vehicles are the preferred 4x4s. In Africa, thanks to colonial history, the Land Rover dominates, but the Suburban and Jeep are also well represented. In much of east Asia, outside the US sphere, Japanese, and lately Korean, SUVs dominate, but the Suburban and Jeep are still desirable (though a bit large to navigate some of the terrain).

It is not just the drug lords who drive such vehicles. In virtually every "third world" nation, there is a segment of

the population with the income and taste for Western goods
who desire (and purchase) these vehicles. This is much the
same segment of the population of these countries among whom
amateur radio operators are found. It is vanishingly rare
in these countries to find amateurs among the subsistance
population. The latter haven't the leisure or the education to
pursue such an activity even if the equipment were exceedingly
cheap. That's why the ARRL's attempt to supply cheap CW kits
to the third world a decade ago fell flat on its face.

And conversely, it is why amateurs from outside the US are
very well represented among those working near the SOTA. Most
non-US (and non-First World in general) amateurs are well educated
and relatively well off financially. Otherwise they wouldn't have
the leisure to pursue amateur activities. It is primarily in the
First World where you'll find people who are relatively impoverished,
and ignorant, who have the leisure to be amateurs. It should thus
be no surprise that the GRAPES modems have sold better to foreign
amateurs than to US amateurs (or that CW kits sell better to US
amateurs than to foreign amateurs). In general, the third world
amateur is not backward, he is not ignorant, and he is not poor.
But the same cannot be said for some US amateurs.

Gary

: Hi--

: I just bought my first 2/70cm HT(Yaesu FT-50R) and am excited about
: the hobby. I am studying for the Tech-Plus exam, and am looking for
: info on ham activities in the centrral Arizona area. Are there BBS,
: newsgroup, or IRC resources here? Also, I would like to know if there
: are retailers other than Ham Radio Outlet in the area, especially
: offering used equipment. I would like to get on 6m soon, and wonder if
: 2/6m gear is made, other than ICOM's IC-706, which is a great rig, but
: out of my price range. Thanks.

Hi, Will. We were just in the Phoenix area for the ARRL Southwestern
Division Convention a couple of months ago. There seemed to be quite a lot
of activity in the area.

You might check out AES; they sell used gear via mailorder. Or subscribe to
the newsgroup rec.radio.swap; all sorts of equipment is sold there.
AES has a Web page, and I believe the used gear is listed there.

As far as I recall, the IC-706 (I have one, BTW; great radio!) is the first
all-mode rig to have 6/2m in the same box; someone will undoubtedly
correct me if that's incorrect. Well, there's the Yaesu FT-736R that has
2m/70cm standard, and you can buy a 6m module, but you're talking > $2,000.

Icom's IC-275 is a nice rig, but pricey even if used (2m only) and they used
to make a 6/10m model; the IC-575, I believe; also not cheap.

Good luck, and let me know if you have other questions.

> 10m SSB.
>
Allen,
do a search for "CB Radio". Look at Left Coast CB abd it's links.
You will find an abundance of info on PLL unlocks. If you know the PLL, I
may be able to provide some info for you. Getting the fo's is the easy
part....Broadbanding the receive and transmit capabilities requires some
time, effort and substitutions. There are "tricks" such as adding more
broad varactor diodes in the vco and ssb circuits, paralleling unused
sections of IF transformers, changing the value of the synth crystals, etc.
Some PLL's and circuit board combos are better than others, and the Cobra
usually uses a Uniden board with either a 8719 or 8734 PLL IC.

The best authority is Lou Franklin of CB Cint International. You can
contact him at info@cbcintl.com .
He has written variouis volumes of info covering whatever level of info you
care to get into. He is also a ham and has been hombrewing and studying
PLL circuits since their introduction to the retail market.

You will also have to consider adding FM (relatively easy) and
repeater offsets. It is a good project, and even if it doesn't perform as
well as a "store bought" rig, the experience that you will get has a value
that no price can be set on.

Good Luck

Try 97.305(c). Says right there in black and white that the RTTY/data
segment of 20m only extends from 14.000 to 14.150 MHz. Above 14.150 MHz
is the phone/image segment, and RTTY/data is not authorized there.
I'd expect this from others, but I'm really disappointed in you,
Roger.

>What I meant, and what anyone but an idiot would have known that

>Even if we do dump the CW requirement soon, as now seems likely.

Well, maybe *you* never run data down there, but I've done it, and
am doing it now. Three of us are doing weak signal coherent experiments
down there below 14.060 MHz with my DSP I/Q receiver. And it is legal
to do so. The CW boys don't seem to notice us, not surprising since
we're running very QRP and very slow (currently 0.1 baud at 100
microwatts, a MAR-4 feeding an attenuator is the PA, modulation is from
a PC sound card, same as my earlier bench test setup). Basically what
we're doing at the moment is the old Lowfer integrate and dump routine,
with a couple of novel, I hope, twists. CW signals don't bother us much,
we're not running any AGC, the A/D just limits, and their dits are lots
shorter than our bits, but RTTY tears us up if it is anywhere within about

3 kHz of us (ADC stays in limiting, not enough dynamic range in the current version).

>By all means, let's keep the CW ops off our 14.065-and up
>digital frequencies. Pisses me off when they come up there during
>these too-frequent contests.

Doesn't bother me. They have no specified segment. They can go where they please, and accept the interference they get there too. Switch to a good error correcting protocol and they won't bother you either.

Who do you suppose introduces legislation authorizing regulation,
sponsors it, votes for it, and authorizes the funding of regulators?
It is always advantageous to have a block of Congressmen in your pocket.
The regulators, whose budgets depend on the goodwill of those Congressmen,
listen. The number one (two, three, and four) rule of influencing government
is *follow the money*. Having a President in your pocket can be useful,
but not nearly as useful as having a majority of the House committee
deciding the budget of the agency you want to influence.

Congressmen are cheaper to buy than Presidents too, and they usually
stay bought because they want their job for the long pull.

Narcissism??? Wrong.

There are no dues Jeff. The ONLY requirement is that you have a ham
radio license AND have the name of "John Mackey".

So far, the club only has 3 members.

If you want to join, you would have to provide proof
of an amateur radio license with the name required name
as being issued to YOU.

In your case, you would have to legally change your name to
become eligable for membership in the John Mackey Radio Club.

Yes Kevin, & thank you. I have often been proud of the way that situation turned out in Rec.radio.scanner. We had a situation there where an individual was getting quite out of hand on that NG & had already ruined another NG (actually Echo) on Fidonet.

SEVERAL of us finally took action to convince this individual to change. While a few of the originals dropped out, a hand full of us remained at task to flush this troubled individual of our midsts. Fortunately, the individual stopped his harassing style & now (after nearly 3 months) the NG is again a pleasant place to be.

Why, Radio Shack of course !

:-)

Ah ... so, this is sounding better.
In a post, long long ago (and maybe in a different galaxy), I got the
impression
that you were wanting someone else to do all the work, so that you could
set up a HDTV station. Now you are talking more of an R&D type project,
which is well within the bounds of "traditional" amateur radio.

Same comments as above.Where I would start to get uneasy is when you can
go down to the local Rat Shack and buy a radio based virtual reality
with HDTV display.

Yes there is (currently) room on the microwave bands for this sort of
thing.

> >I have no objections at all to you doing it so long as you don't insist

> in technology.

I see what you are saying.
But, there was a fundamental jump from spark to cw technology.
The next fundamental jump was modulation of that CW (other than on/off).
The variants (AM/FB/SSB etc) are just variations on that theme.

the next fundamental jump is probably speread spread spectrum (strange
...
sparks produced a spread spectrum too ... :-)

Now what you modulate onto your cw is sort of unimportant, it can be
speech, TV, HDTV, digital communications ... anything.

I just think (me, my personal opinion) is that the fundamental interests
should still be communication and radio technology.

You can have communication without radio technology - telephone works
fine,
so does internet, so does writing letters and a dozen other ways. In
fact,
if you are only interested in communication, the others may be better.

> And no, I don't have any intention of taking the bottom 25khz of 40 meters
> away. Is that what this is about? Are you defending your spectrum?

No - don't confuse me with the CW worshipers.
But I equally don't think it reasonable to kick them off that 25khz just
because
I don't appreceiate CW.

> What scares me more is that the microwave bands are going to get traded or
> shared away in exchange for another 50khz at 20 meters. What worries me is
> that the future of ham radio is gonna' be sold out so we can preserve the past.
> I'm worried about the trend I see actually happening, right now.

You are making me want to say things which make me sound like an Old
Fart (TM).
I'm not (well, I don't think I am :-). But, I have been listening to the
amateur
bands for a long time now. Long enough that some of the people I
listened to
as a kid have now graduated to Old Fartism. they and the generation

before them
and probably the generation before that all said the same thing that you
are
saying now.

Use it or lose it ! *They* will take it all away ! All ham bands will
be gone in 10 years !

Well, they are still around. Some have gone, but some new ones have
opened up.
Some of the bands which were going to go through lack of use are still
there,
and still unused ...

>
> I think technical innovation is part of the intended purpose for ham radio.
> Technical innovation is not permitted on CB.
> Putting a TV signal on CB is illegal. What is your point here?

The point is what I was getting to above.
There is no technical innovation on replacing voice modulation with pops
whistles and squeaks from a modem. If the microphone was external on the
CB rig,
unpliugging it and plugging in a digital communications system requires
no
technical knowledge, and could be done.

If your real interest in <whatever> is the <whatever> and the amateur
radio
part is just to make it cordless, then type accepted black boxes on the
appropriate
bands is fine, and all you need.

However, if you are intrested in <whatever> AND amateur radio, and want
to
experiment to enhance both by their combination, then more power to you
!

> >Wouldn't off the shelf, type accepted black boxes work fine for what you

> is for. It's the place to do stuff first.

Nice thought. But unfortunately, cool stuff tends to be worth money, and if
money is involved, someone else will do it first - because they have the investment
resources to do so.

The only chance you have to be first is to find something which is "cool" to you,
but not cool enough to be worth billions as a product, or to have the forsight
and inginuity to spot something entirely new - then you need to resist the temptation
to go off and develop it yourself and become a millionair(ess) :-)

Actually, maybe that would be the way to go.
Think up a cool ida, make billions with it, buy all the ham bands,
and only allow people/modes/things you like on them :-)

Oh dear ... I probably shouldn't have suggested that ....

You can do this, but it can get noisy.
The power good is an output to the motherboard, not an input.
You will probably have to build some type of 'filter' board to feed the
output thru,
in order to clean it up a bit, maybe a big cap and a couple chokes.
Also, most supplies will not work unless there is a load on them.
Usually any line will
work, but you can smoke the switching transistors if there's no load on
it.

Enjoy,
Phil

3915. ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur

SB QST @ ARL $ARLB097
ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur Radio

ZCZC AG77
QST de W1AW
ARRL Bulletin 97 ARLB097
From ARRL Headquarters
Newington CT December 17, 1996
To all radio amateurs

SB QST ARL ARLB097
ARLB097 NTIA Report Bullish on Additional HF Allocations for Amateur Radio

High Frequency (3-30 MHz) Spectrum Planning Options, a planning document released December 13 by the National Telecommunications and Information Administration, says the HF spectrum is flexible enough ''to accommodate most, if not all,'' demands for additional HF spectrum, including new and bigger HF ham bands. The NTIA is an Executive Branch agency in the Department of Commerce that's responsible for developing telecommunications policy and advising the President on telecommunications matters. The NTIA's latest report is a follow-on to an NTIA study released in March 1995 (see QST, June 1995, page 75).

The Options report addresses spectrum availability and long-range planning options for services that were identified in the earlier report as needing additional HF spectrum--including Amateur Radio. The report cites a potential 900 kHz or so of expanded or upgraded allocations for Amateur Radio in the HF spectrum, including:

+ an exclusive, worldwide allocation at 3500 to 3800 kHz
+ a new band at 4945 to 4995 kHz (additional technical studies would be required)
+ an ''aligned worldwide'' allocation at 6900 to 7200 kHz
+ expanded worldwide, primary allocations at 10100 to 10350 and 14000 to 14400 kHz
+ expanded allocations at 18068 to 18318, 24740-24890, and 28000 to 30000 kHz.

Some of the potential expansions proposed for amateurs and broadcasting are mutually exclusive or could involve sharing by the two services. These include the potential expansions at 30, 20 and 17 meters. According to the report, ham radio allocations account

for 13.1 percent of the HF spectrum (3 to 30 Mhz). ''There are no current plans to auction any HF spectrum,'' the NTIA report states, but notes that additional allocations for ham radio would come at the expense of other services--primarily fixed, fixed-mobile and broadcasting. ''The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz (bands) appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally,'' the report said. Changes in the 80 and 40-meter bands ''will require the inclusion of these proposals in US preparations for future WRCs,'' the report added. A requested allocation at 6900-7200 would serve ''to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band,'' the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz ''a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band.''

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some ''exclusive'' allocations--might be another option.

Calling ham radio ''the oldest radio service'' and one that ''pre-dates regulation,'' the NTIA report casts the hobby in a favorable light. ''Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design.'' The report goes on to say that ham radio ''continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services.''

E-mail and news are terrible communications media.
It is much too easy to get into "flame wars" with people you have never
met, and to form opinions about them and their idead which you would
never do in a face to face (or even radio) exchange.

It is also much to easy to call names and apply labels - I know, I do
it,
and have it done to me. It isn't productive.

[I know this is a waste of time, but ...]

As a group, (you and "them") you need to cool it.
Each side needs to recognise that the other has a point of view, and
that
however dumb the point of view may be, the right to hold it and express
it
is important.

The channelisation is wateful.
It doesn't need to be quite as wastefull.
Cheap HTs with no selectivity, and overmodulated repeaters
force the spacings used. 12.5khz should be plenty, which would free up

lots more space, without having to make the "quantum jump" in technology
to a totally digital system

> I'm NOT talking "rocket science" here ... all of this is READLILY doable
> .. we just need to get past the people who don't want any progress or
> change ...

Heh! its not rocket science to not over modulate and splatter all over
the band - you just back off the mic gain, or hold it further from
your mouth - but does that stop them ??

> >I think we agree here ... but I *might* want to include some people who
> >do know what they are talking about, who overstate the importance or
> >relevance of some technology to ham radio.
>
> You mean the folks who insist that ham radio will go to hell in a
> handbasket if we eliminate CW testing???

You are too touchy about cw.

No, that isn't what I mean.
I mean that just because I happen to love some particular technology,
and think that it is the way to go, doesn't mean that everyone should be
forced to go that way.

Bows and arrows ceased to be technologically relevant to warfare many
years ago - but that doesn't stop people enjoying archery. CW stopped
being
technologically relevant a few less years ago, but some people still
enjoy it,
and still prefer it for certain applications - just as some people
prefer
hunting with a bow and arrow, rather than a high powered rifle. Some of
those
people may even claim that it is the *only* way to hunt ...

> bet a week's pay that you could not identify (detect) one if you tried
> (unless you were privy to the spreading sequences used) ... but they're
> there

No argument with any of that.
But, there are two (or more) views about DX/EME/etc.
There are those (like yourself) who strive to improve reliability and
communications efficiency - that is what holds the facination for you.
There are others for whom the use of minimal technology holds the
facination.
Hell, there are people who could work the DX easily with a few hundred
watts,
so what to they do ? they run 10mw, and use CW.
They do that because the QRP/low tech. is all part of their enjoyment of
the hobby.

> You mean like "CW is king and better than anything else under all types
> of adverse conditions." and the occupied bandwidth rules that pander to
> the outdated "conventional wisdom" that "narrower is *always*
> 'better'???" or "Digital modes? I'm not interested in keyboard-keyboard
> QSOs ...." (the assumption that "digital" means "keyboarding" ...)

Remember that people in the US (seemingly more than in other countries)
are bought up to believe that rules are inviolate, and that "they",
particularly "they of long ago" were all seeing, all knowing infallible
beings ... such semi-religeous beliefs make life much easier ...

The keyboard-keyboard stuff is just because thats all you can buy off
the shelf ...

> works, I just want to *use* it!" are NOT "real hams" in the sense of
> what the regulators had/have in mind when they wrote/read 97.1 ...

Now you are starting on the "they knew best" track :-)
It is interesting that some of the fundamentals of the amateur
regulation
are similar, but in the detail, there are wide variations in the
legislaion
enabling amateur radio in different countries. For example, the
underlying
rational in the US is for emergency communicatione, in the UK it is
"self training" in radio technology and techniques. Who says 97.1 is
right ?

or even the best interpretation of what amateur radio is about ?

As for the "just use it" people. Well, there *is* a need for something between
CB/GRMS and full blown amateur radio as you see it. The fact that it is needed
is evidenced by the number of current "hams" in that category. Probably much
more than 50%. The problems occur with the contention for a limited spectrum
allocation between the two groups.

Maybe it is now time to revise the whole basis of amateur licensing.
Lets just assume that CW *as a requirement* is dead, and although there might be some
twitching from the dead body still, it will go away.

So rather than splitting the licences on the 30Mhz boundary as at present,
how about something similar to the current US scheme, with "classes" of licences.

Basic Class:

- pass a basic electrical/radio theory exam.
- pass a radio regulations exam.

* Can use all bands, with *commercial* equipment, no mods, no external power amplifiers.

* Limited to top 50%/75% of existing bands.

Technician Class:

- pass full electrical/radio exam.

* can use full bands.
* can use homebrew/modified equipment.

Experimental Class:

- pass extended electrical/radio exam.
- pass extended regulations exam.

* only this class can receive license variations.

This sort of scheme wouldn't shut anyone out of anything based upon anything
other than *relevant* knowlege. The basic class tests would be similar to
todays general. Technician class similar to advanced/extra. Experimental
would require a test beyond anything in the amateur testing today - maybe
similar to the commercial license tests (I don't know, I have never seen one).

Philip

With all the virtues I have, it would take hours!!!

Hi Larry. Yea, where ever I go I always have a following that is VERY anxious to be with me & follow me, try to be like me, & want to please me.
But there is always one or two bad apples in every barrel. :(I get people who follow (like all the others) but, apparently due to jealousy, want to do unpleasant acts in a desperate & feeble attempt to make them selves look better. They some how think they are going to make themselves my equal (hahaahahhaahha). As you list above, Blake Bowers is a good example of that. He has already been kicked off of one Fido echo (temporarily) for attempting to harass me during a moderator election (I still ended up becoming a member of the moderator staff regardless of Blake). Only a week ago, he was warned on another echo for the same type of thing.

But actually, there has been many *FUNNY* instances come up from my dedicated bunch of fans & followers. Specifically, the stories & poetry that my followers make about me has been of great amusement to myself & many others. Dick Kendrick has written a couple of funny stories which we plan to list on the PARG ham radio club web page, if Dick gives his preferences.

(I guess it depends on how much of a DICK he is, hahahaahahhahaahaha)

> If I only had their free time, maybe I could learn to worship too, like
> they do.

Unfortunately, I am FAR to busy to do those types of things just like you are. Apparently, people like Blake & Dick Kendrick have bunches & bunches of time available to do these types of things!!!!

> ALL HAIL! ALL HAIL! ALL HAIL!
>
> Now we just need to get the buffoon and Bert to join in. You could start
> your own Church!

HEY!!!!! That's a good idea!!!! I could get a MASSIVE tax break
provided to me by my loyal followers!!

I think I like the term "Father Mackey" or "Reverand Mackey",
"Vicar Mackey" even has a cool European sound to it!!

I could perform wedding ceremonies & blessed sacraments!

Bless you and may Peace be with you, My Son.

Another idea... I just finished a 3 x 3 x 6-ft hole. Cut through a 4-inch concrete deck slab to get at the dirt. Dug straight down with long-handled shovel. Tied rope to handle where it enters the shovel. Made it _MUCH_ easier to get the dirt out when the hole got deep. Enlisted XYL to handle the shovel; I did the pulling on the rope. Dunno who came out better!!

>(Taken from the 1928 exam.)

Well, I suppose we could ask applicants to draw a schematic of
a complete 1928 amateur station, but I'm not sure just how useful
that would be in 1996 (or even 1946). The technical standards
and expectations were different then; a simple one-tube MOPA
transmitter and a one-tube (or maybe two) super-regen receiver
and power supply was common.

It would be hopeless to operate such a station today as anything
more than a novelty. Though the transmitter might be OK, the
receiver would radiate enough signal to work transcontinental
DX and be illegal.

Good day one and all.......

David as for the backhoe, forget it......I've spent a number of years running one and unless you have one of the really small ones, you can't dig a hole 2.5 ft. in diameter and 6.5 ft. deep. It just can't happen and leave the surrounding ground undisturbed. Sorry.

Having spent some time in the world of construction, the way I see it you have 2 choices. 1. Gat a shovel and someone with a small kester that can dig and fit into a 2.5 ft. hole. Yes, I know it is not very likely but, it is a way. 2. Talk with the local electric company. They have a truck that is used to set electric poles which has an auger that can dig a round hole. Most of these trucks will dig somewhere between 18 and 30 in.. Some have differant sized augers to dig the needed dia. hole.

If you can talk them into digging the hole you may have to exchange diameter for depth. I'm sure there are some eng. type folks out there that can give you the numbers but, I would thing 18-20 in. dia. and 8-9 ft. deep would be a good exchange for the requested 2.5 ft. x 6.5 ft.. Remember, put some re-bar steel in the cement base to hold the thing together.

Hope this helps......and please I'm not trying to put anyone down on the backhoe deal.....It's just that the physics of the way they dig that won't let them do this paticular job.

73's and good luck with your tower.......

Why dig a hole 6.5 ft. deep? Unless the tower is really tall and self
supporting, you would be better with a hole about 3'x3'x3'. Suggest you
try to get hold of a copy of the Rohn or Heights tower manual. They
give suggestions on how to design and make tower bases.

If the tower is guyed, you can get by with a much smaller base.

Does anyone know where I can get a copy of the mods available for the HR2600? I am not a packet operator any more ('used to run a BBS...), but I can only find a mod for packet QSK improvement. Are there any RIT-XIT, freq., or modulation enhancement mods? The HR-2510 information does not apply to this radio.

Any help is appreciated.

3933. Toshiba T-1000 Battery Mod...

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-17 00:00:00 UTC
From: eudoh@crl.com
Message-ID: <597l19$k2v@crl3.crl.com>
Source record: 209853

Toshiba T-1000

B A T T E R Y H A C K

This is a basic battery modification or hack for the Toshiba T-1000
laptop which allows you to use AA (alkaline or Nicad) batteries.
The nicads are preferable since I've found those to last longer, and also
to be rechargeable using the 9 volt DC power brick that is used with the
laptop.

The main required item is the black, 4 - AA battery battery holder, used
originally for the CMOS battery backup in the early AT's before the new
battery packs (which included nicad batteries) were put out.

```
black red
= (-) = (+)
cut = =
------------------|---=--------=-----
| - | + | - | + |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| | | | |
| + | - | + | - |
------------------|------------------
cut

= = = =
= = = = = = =
= (connection 1) =
= =
= =
= = = = = = = = = = = = = =
(connection 2)
```

Required Items:

.1 Toshiba T-1000 battery
.1 4 - AA battery holder (Radio Shack 270-391)
.1 small saw or etco blade/knife
.1 30-35 Watt soldering iron
.1 Standard rosin core solder

.1 Piece of small gauge insulated wire
.1 Screw (same size of that used in the battery compartment but at least
1/4" of an inch longer.

The first order of business is to cut the holder in half at the "cut"
point indicated in the picture above. The saw worked best for me.
Be careful not to cut the black wire which is represented in the photo above
as "connection 2", unless you don't mind soldering or piecing it back together
later. You will have to cut "connection 1" and solder a piece of insulated
wire between it.
At this point you will need your original battery. First, cut all 4
leads going to the battery as close as you can get to the battery. Solder
the 2 black leads together with the black lead coming from your new battery
pack. Solder the 2 red leads together with the red lead coming from your
new battery pack.

The Modification is complete at this point.

UPDATE:
If you have an internal modem installed, please proceed, but ignore section z
below...
If you don't have an internal modem installed, please skip to section z below.
You will not use the T-1000 battery compartment, but will need 2 pieces of card
board to pad the area beneath it 'cause the 2 pieces of the battery holder will
be laid flat. So a piece of card board beneath and on top of the battery
holders to prevent anything from possibly shorting out either the motherboard,
internal modem, or battery holders.

z.
Placing the 2 pieces of the battery holder "back to back" will allow them
to fit in the T-1000 battery compartment.
The battery lid will not go on unless you replace the screw with one that
is a little longer.

Thank you and enjoy....

I think this would be kind of cool. I think we need more 'building stuff'
contests than we have now. Maybe just a simple homebrew gadget contest
with various categories where we could build stuff, and have it judged
for appearance, reliability, innovation, usefulness, etc.

Maybe that's how you get hams into construction. Make it a contest.

>propagation/impairments. I would think that would be rather trivial,
>compared to some of the other problems a person is faced with when
>working on a new technology.

I think a crude HF proagation emulation box could be built. But, then you'd need to be able to transmit on HF to verify that the emulation box actually matched how the atmosphere really worked. I see it as a masters/phd thesis level project -- really.

Actually, I think a mathmatical emulation of HF is an interesting issue. Like I wonder if the theory on the interaction of sunspots and weather with the upper atmosphere is sufficiently understood to make a model that would duplicate what the atmosphere really does. Ideally you'd want a system where you could type in two locations on the planet, with a terrain mapping of the earth -- so it knows whether there's land or water between the two destinations. Perhaps you could do some snapshots of typical temperature, pressure and humidity for the planet and run the simulator with each of these -- factor in solar wind and particals from space.
You'd feed in a signal for the transmitter, and the
emulator would modify the signal as if it had gone through the path from point A to B.

I know, by accident, that some work has been done to emulate acoustics in the ocean, which seems like a similar problem. Perhaps someone out there has been working on this.

When I am stupid enough to buy a lottery ticket, I dream about quitting my job, buying a house on a mountain, putting up a beam and putting out 1500 watts. Then the next day, I read the paper and find I am stuck with the dipole over my roof and 100 watts.

All of you dreamers are thinking about the day when you will see a no-code ticket. You plan to get on the air and work dx to China. The only way you are going to work dx is to learn 13 wpm code. And if you want a piece of peace on the bands,(ie:advanced and extra bands) you will have to learn 20 wpm. That's just the way it is. Not the way you or I or anyone else wants it...Just the way it is. If you want to work REAL ham radio...You will first learn the code. Buy a computer program and start learning. Who knows? You might like it! NOT. Life isn't fair. The afterlife is!

I agree. The quality of no coders is the highest. When I hear the couple spending all the repeater time talking about their kids, their house, their relatives and using the autopatch to say they will be home in 5 minutes, I can't help but think...These are quality hams.

Unless you get a vanity callsign, your place in the sequential callsign system is a pretty good clue to your longevity in the hobby. My KF6 prefix dates back to 1988; today's Advanced-class callsigns in California are KQ6s.

If I had requested a callsign change when we first moved to California in 1975, it would have been a WB6 prefix. Similarly, if I had kept up with things and requested the change in (1978, I think??) I would have a KB6 prefix.

HI from northern Michigan.

For the first time since 1988 my 6 meter, 2 watt CW beacon on
50.0775 was recently put off the air after having been evicted from it's
"home". A new, nearby location has been secured and the beacon is once
again on the air from the Straits of Mackinac.

Please let me know if you ever hear it.
73 Dennis Havlena - W8MI

A bit of advice on using a backhoe to dig the hole for a tower. All tower mfgs strongly suggest you NOT use any back hoe type digging. Reason is you need to dig the hole straight down, pour concrete and let the concrete use the sides of the ground as part of its support. If you backhoe a 45 cubic foot hole you cannot "backfill the excess hole after the concrete form is poured. The backfill cannot support the lateral tension of the concrete.

I just did a 4x4x6 hole two weeks ago. I used a post hole digger making a 6 hole grid and then cleared the rest with a shovel. Think of gravedigging, I know I did.

For me, getting the efficiency IS the magic ... the magic is in the improving of the technology to be able to do things never before possible, not in doing something (work country_x on CW) that's been done hundreds (thousands?) of times before.

>Anyway, here's my point. You want a box that copies signals down in the noise

EXACTLY ... you'd better be careful, you're beginning to understand me a
bit ... and my reasons for dropping CW testing are NOT silly ...

>And sometimes I feel sorry for you. Ham radio is Magic. But you'll never feel
>that Magic. Because the Magic doesn't come in a box. You have to go find it.
>And I don't think you ever will.

Sure I will/do ... the magic is in the learning/designing/building ...
the operating is secondary ... it's just the testing phase of the
design/build/improve process. I feel sorry for folks who are too
stagnant/backward/lazy/lack_the_curiosity to experiment and build.
THEY'RE the ones who are missing out on the *real* magic of ham radio.

And I really believe that that's the part that the regulators feel/felt
is/was THE *most* important part of ham radio ... yacking can be done on
11m ... the exploration/experimentation/building/learning/improving can
ONLY be done by the hams ... the CBers (at least the ones on 11m) are
not allowed to do those things, the're only allowed to "yack" ...

Well, if that's what blows your dress up, go do it. Stop trying to talk the
rest of the ham world into going with you. Stop criticizing everything that
everybody else enjoys about ham radio and go do what you like.

>Not an opinion ... engineering fact ... don't take my word for it ...
>plenty of other technically knowledgable hams will vouch for the truth
>of the statement.

It's not a matter or anybodys 'word for it'. It's a fact that none of this stuff

exists today that I can use today on the ham bands.

>>Take a minute to read this Carl, forget about all the name calling and the

>hundreds (thousands?) of times before.

You would fit in well in Guam. We have a packet BBS with no messages
and no users. We have three VHF repeaters that nobody uses. Technology for
the sake of technology is a waste of parts and electricity.

Logically, we could end this discussion right here, on the note that anything
you can design for communications is useless, as those communications have
already been made, according to you. Can you design a whiz bang box to talk to
little green men from mars whose signals are down in the noise floor ? No. You
can only design a whiz bang box to talk to people in other countries of the
world that we have, according to you, already talked to hundreds or thousands of
times on CW. So your box is useless. Don't bother to design it.

>>Anyway, here's my point. You want a box that copies signals down in the noise
>>that no human can hear. I don't. No Magic.

>Baloney (opinion) ... the magic is in the technology (opinion/fact).

See above.

See above. I'm sorry, but I miss seeing anything magical about designing
a whiz bang box and then not using it for anything.

>And I really believe that that's the part that the regulators feel/felt
>is/was THE *most* important part of ham radio ... yacking can be done on

>not allowed to do those things, the're only allowed to "yack" ...

No, it can be done at companies that design whiz bang boxes. When they
are done, AES will sell them and hams will use them. First, you don't like CW.
Then you don't like the ARRL. Then you don't like DX. Then you don't like
contests. Now, you are telling me communications is a waste of time, only
reason to communicate is to test the whiz bang box. At this point I think you
are really in the wrong hobby. I think you see ham radio as an extension of
what you do at work.

> just the way it is.

And right he is. If indeed it's DX that you're after on HF, you'll often find the rarest of it down around the "dot zero" part of any given band. CW gives you a real edge when you're DXing in compromise conditions. The barefoot power and wire antennas that many of us run WILL not break through the 20m SSB pileups, and in all likelihood you won't even HEAR the DX station. Plus, you need a General ticket to get on 17m, the only other "reasonable antenna size" phone band that's regularly open for DX these days.

Now, wait 'til the sunspots return and the above isn't EXACTLY valid... 8v)

Well now, that's a lovely attitude. You know, I really have a problem with the all-too-frequent disdain that's expressed toward older hams. Yeah, the "WW-II" guys. These people are a wealth of knowledge, experience, and inspiration. And yes - sometimes they are stubborn, close-minded, and opinionated. Those traits seem to be a "privilege" of age. :)

Nevertheless, these folks have more to teach and to relate to you than you will ever have the patience, time, sensitivity, and intelligence to absorb. I have many fond memories of QSO's with OT's - it takes me to a different time and place. I will be sorry when they're all gone. If you don't care what they have to say, at least show some respect. Oh, and by the way - I'm 29 myself.

I have the following for sale..............

Heathkit..Remote Coax Switch, model HD-1481

This is a kit, still in the box, complete! This kit has two units.
One that mounts outside the shack connecting up to 4 antennas.
One coax leads into the shack. Antenna selection is made through
the one coax along with the RF signal.

The switch handles up to 2000 watts PEP. I will be glad to answer
questions for anyone who may be interested.

I am asking $140.00 for the switch, you pay the shipping, about 6
pounds.

Regards Don WB6LPJ

Hi Eric. Long time no type.

It is amazing how his memory is, SEVERAL people took action to get rid
of him, and somehow he thinks he was part of the side getting rid of
him?

I wonder if he slaps himself when he is being stupid? Of course, that
would be a continous thing....

Amazing.

As you know, all anyone has to do to see what really happened, and
what a ass Johnboy is, is to take a trip to DEJANEWS.

Amazing!

Rich, usually computer noise in the radio isn't caused by the computer
being too close to the radio, it's radiated noise from the computer that
gets into the radio thru the antenna. If you are using an inside antenna,
that could be the problem. If it's outside, try moving it as far away from
the shack as you can. Just disconnect the antenna from the radio and
you should see your computer noise go away.

I hope you are correct! I just see the Military getting away from it
and the Maritime Service has too, who is next? Amateur Radio. I
personally think if you treat it as a privillage and not a penalty,
everyone will be better off.

>Peter
>Mostly satisfied ARRL member
^^^^^^^^^^^^^^^^^^^^^^^^Me too.

Woohoo! Yeah!

You have to realize Peter that the priorities are straight. At least it appears to me (on the Internet--and elsewhere) that HF is the most important part of the Amateur Radio spectrum. Instead of taking a stand for "their" current privileges in the VHF and up regions 'they" (the HF no-code proponents) would rather engage in pissing contests such as the perpetual code -- no-code debate we are subjected to endure here and in some of the other radio.amateur newsgroups.

It's like, "let's fortify the front while the rear is being blown to smithereens." Uhhhh..something like that...yeah..something like that.

Cheers! jim, wk1v

Not at all. I rarely clutter my brain with useless facts like the
above. Useless because only a lid would run data in the fone band
anyway.

> Well, maybe *you* never run data down there, but I've done it, and
> am doing it now.

Sounds like a waste of time to me, and poor operating procedure as
well. Very poor. I'm quite disappointed in you. The informal
digital band plan is pretty clear about where data is supposed to
be operated. You are in violation of this plan, which is not likely
to endear you to your fellow hams. Of course, if you run under
100 milliwatts, I guess you can operate wherever you want, and who
will care?

>PHONE in?

Yeah, you push those little buttons on the telephone instrument. They beep and make tones, dual tones as a matter of fact, and it interfaces into a worldwide network of like instruments.

You can always find out what time it is during the wee hours of the morning. All you have to do is press a series of at least seven numbers. Someone will pick up on the other end and say, "Do you know what time it is? IT'S 3:30 in the BLEEPING MORNING!" Amazing little things aren't they?

I know they don't come with instructions so hopefully this helps.

That's what adaptive power control is for. There is no reason to
run more power than is necessary to maintain the required Eb/No
at any given moment. Adaptive power control continously adjusts
power to keep the signal strength near that level under varying
band conditions. Just running max power all the time because the
channel *might* fade, is wasteful, of spectral reuse, and of your
power bill.

Hardly.

If you remember (you seem to never want to look at the facts) there were
SEVERAL of us that took the individual to task for his behavior.

Regarding the banning from the Fidonet echo, I am PROUD to be one of the
people who was banned from that echo as the moderator kicked out
anyone who was not an ass kisser. I understand that this was before
your time, but in those days we were getting about 40-50 messages a day
on that ehco. After that moderator took over & kicked off everyone
of quality because they wouldn't kiss ass. Now that echo gets about
5-10 messages a day - and every time I review that echo the quality
is crap. So I never bother to read or post there anymore (under my
assumed name I acquired).

BTW- Since the individual backed off, we then backed off too
for the NG.

>convert it to SSB. In 25 words or less.

Well, I could tell you how I converted a MOPA rig to SSB in 1964 with
a pair of IN34As and a handful of passive parts, and used it to good
effect as net control of the Kentucky traffic net, but that would take
more than 25 words, and you'd only end up with a single frequency SSB
transmitter (and not a very good one by today's standards, though it
was pretty good in 1964). I'd refer you to any Handbook of the era for
the details of using singly balanced mixers and half-lattice filters for
SSB generation. I'll give you a more modern way in 25 words.

Use 2 SBL-1s for I/Q, 1 AD1847, 1 ADSP2181, 1 27C256, a coil and capacitor
for quadrature, plus another resistor to rebias the MOPA PA.

That's 25 words and 8 components, and anyone skilled in the art can
take it from there. That'll give you a SSB transmitter when combined
with your MOPA setup, and gives you a SSB receiver as well. It'll
support LSB, USB, FSK, PSK, FM, AM, and plain old OOK with no further
hardware changes. The receiver dynamic range is a little weak, so you
might need a preamp/attenuator combo to make it really usable under
all conditions, but you're starting out with no receiver at all, so
consider it a gift horse.

To make it convienent to operate, you'll also want to add diode
switches for TR, and a rotary switch to select operating modes,
or a single push button and LED indicators if you prefer stepping
through the modes. Any electret mic should work directly into the
1847's mic in pins. You might want to add a LM386 if you need speaker
level audio for receive, otherwise you can use a cheap pair of personal
stereo headphones driven directly by the 1847's line out pins.

Using modern VLSI and DSP, the highest parts counts are in the
analog VFO and PA you've already supplied. The rest is just
software. If you like, you can scrap the VFO and replace it with
a single chip DDS to further reduce the parts count. That'll get

rid of the coil and capacitor above too, and the need to tweak
them for frequency excursions, since the DDS already has quadrature
outputs. Tune it with software over a serial link from your PC, or
add a 68HC11, a LCD readout, and up/down push buttons (or a rotary
encoder) for standalone operation.

This stuff isn't jokeware. I've recently built 3 of the described
receivers (using the Analog Devices evaluation kit for the DSP
part because it's cheap and saves me some work). And 3 transmitters,
for my QRPp coherent data transmission experiments, though I drive
the transmitters with the stereo outputs of a sound card in the PC
instead of using the DSP for that (because I want to be able to monitor
my own transmissions with the receiver), They differ significantly only
in the software running on them, and the frequency reference used (a
topic for another time), from the system described above.

The really nice thing about this system is that you can translate
the equations describing your modulation directly into or from RF
without a lot of futzing around tweaking analog components. That
makes it really quick and easy to evaluate several different
modulation forms in near realtime on the channel. That way you
can see how they perform under the *same* propagation conditions.

If you'll look at it again, you'll find that it is Part 95 in a plain
language Q&A format (similar to that used by "The Doctor is In" column
in QST). Its purpose was to make the licensee aware of the rules, not
to test him on them.

3979. Some thoughts on A0, A1, A2, A3...et al

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-18 00:00:00 UTC
From: jim@rst-engr.com
Message-ID: <599g4h$7nv@li.oro.net>
Source record: 209631

Lincoln once told the story of the man that was walking down a country road one dark night when the thunderstorm hit. He couldn't see anything until a lightning bolt flashed, and then he could see long enough to walk a few more feet. One lightning bolt hit so close that the sound and pressure drove him to his knees. Unaccustomed as he was to this position, he started praying, "Oh Lord, if you please, a little more light, and a little less noise."

I do hope this post is headed to the light and not contributing too much noise.

We generally relate to a situation from our own perspective. That is, when there is a problem, we try and solve it from our own point of view. The difficulty there, of course, is if we only have a hammer, we view every problem as a nail. I hope you will forgive me interjecting my own situation into this treatise, but it is the only one that I can deal from.

In my pocket are licenses (certificates, if you will) for driving, flying, engineering, and mechaniking. I'm sure each of you has your own set of pretty colored cards that you carry around, so perhaps you can relate my story to yours.

Most people that have a driver's license can drive cars. Some have gone the other route and gotten the basic motorcycle ticket first. Some have gone all the way and gotten the "big rig" endorsement to drive 18-wheelers cross-country. Should the motorcycle driver look down their nose at the person with the 4-wheel ticket? No, but by the same token, the automobile driver is prohibited from using a suicycle on the road. Is the bike-only driver any less of a motorist because, in an emergency, he can't hop in a 4-wheel drive auto and deliver the blood from the center to the hospital in a blinding snowstorm? Or run an 18 wheeler full of toys-for-tots from San Diego to Bangor? I think not. It is just that some people have chosen to demonstrate their ability in the mode that suits their preferred mode(s) of operation.

Can we extend that to other areas? You bet. I'm certificated to design electronical thingies for a living. Do I feel bad or a second class engineer because my talent for designing bridges isn't on my certificate? Not in the least. I didn't WANT to do bridges, buildings, or forgings, so I studied things electrical and passed the electrical exams. I don't fly 727s because my ticket says single-engine pilot. By the same token, some heavy-jet drivers don't have a glider rating but I do. Who is the better pilot? I argue neither, we both have the ratings for what we want to do. We are both PILOTS (or ENGINEERS, or DRIVERS, or MECHANICS), just with different skill areas.

What is the difficulty with relating this to being an amateur radio operator? Just because I know how to send packet at 30kb and you can send morse at 30wpm, who is the better ham? Both. If I want to send ditdahs, I'll study and pass the test to do so. If you want to send digital, then YOU study the test and do so. Just don't hop into my computer area without the training and authorization to do so and I'll stay out of your dit place.

Should there be separate sub-bands for various modes. Well...yes and no. Are there separate roads for autos, buses, and bikes? No. Are there separate airports for jets and gliders? Yes. Are there separate stamps for each variety of engineer? No, not really. It seems that separation of the services depends on NEED. We can debate the need in a future post, and as soon as I can get my current engineering project into production, I'll be back with another post on the sub-band question.

The fundamental question seems to be one of how to define the ham stratification and qualification. It seems to me that most fields teach everybody the basics and then the specializations are learned from there.

Everybody drives on the right hand side of the road, and an 8-sided red sign means stop. An auto driver doesn't need to know how to balance on two wheels nor how to back up an 18 wheeler UNTIL and UNLESS they want to add motorcycle or truck ratings to their license.

Once it gets past lift, weight, thrust, and drag, it becomes piloting technique. Once it gets past Class A-G airspace, it becomes a function of WHAT you are flying within the airspace; the 250 knot airspeed limitation means damned little to the glider guider but everything to the jet jock.

In our first engineering class we learn the four fundamental rules of engineering (don't push on a rope, don't tug on Superman's cape, don't piss into the wind, and don't mess around with The Man). After that, it is all specialization. I'm PULLING on the rope when I design an antenna with low VSWR, and the bridge designer is playin' the game when he puts in a Superman arch support.

And what of ham radio? Why not teach (in varying degrees of complexity) that which is COMMON to all the various modes. It doesn't matter whether you are using A5a or A0, E=IR. I don't care if it is packet or phone, two conductors separated by an insulator is a capacitor. 6-meters is 50-54 MHz. to a dipole no matter whether AM or FM is coming down the pipe to it. Profanity disregards mode of transmission.

And now you want to get your ticket? Fine. Take the practical exam in whatever field you wish. You want to pound brass forever? Go for it. You want to yack on phone all your career? Take the phone practical exam. You want both? Get both. But don't call yourself superior because you know how to adjust the modulation to a fair-thee-well on your SSB rig and I can only use a Vibroplex at 50-per.

We're all hams, just different sub-species of the genus. I'll argue for a basic HAM license, an advanced HAM license, and then simply endorsements for the various modes of operation. I'll argue right now for four

endorsements -- code, phone, complex modulation, and high power. How we treat these various modes is subject for the future post.

I still haven't forgotten the two ratings past advanced -- instructor and examiner -- but we'll just leave those be for a while until the two-part fundamental ham license concept is debated. Once again, fuel for future posts...

(Oh, and for those of you who insist that the ITU -- International _TELEGRAPHIC_ Union, if that tells you something -- mandates code for a license below 30 MHz., you had better read the weasel words in another part of their rules. Any nation can waive that requirement if it so chooses. It's there. Read it.)

Jeff-

You are an incredible fool. How did you ever get a ham radio license?

Just LAST WEEK *YOU* posted a message saying that I ALWAYS post from
a server "KSTS.......", now this message you are accusing me of
sending came from a server with the name "JCPenny".

Besides, stop & think (don't be afraid of something new). Over
the past year you & I have probably exchanged a dozen or so messages
& I have never spelled you name with a "G".

You should hang you head in shame Jeff.

I was. It works about the way the modeling indicates. The filter area is cramped, the parts SMD, so if you don't have the proper tools and techniques, acquire the tools and practice on something cheaper first. (See my posts in homebrew about SMD rework for some tips on technique and tooling. It needn't be expensive, but you do have to approach the job a different way than with thru-hole parts on open boards. Once you learn how, working with SMD is actually easier than working with leaded parts.)

>use,
>but this isn't the essence of amateur radio (at least not to me).

Read the ITU definition of the amateur service sometime. It says
the amateur radio service is for conducting private technical
investigations into the art and science of radio. In other words
developing stuff (the art) and investigating how it works (the
science) are what amateur radio is about. In legalese, "art" is
used in the same sense as it is used in "industrial arts" to mean
hands-on engineering improvement.

>What happened to the idea that amateur radio was not only being able to
>talk to people in strange, far-off foreign lands, but to do so using
>equipment you put together yourself ?

Not much. In fact, we are supposed to be developing equipment to allow
us to do that more and more effectively, as well as to exchange information
with people who aren't in strange far-off lands. This fascination with Dx
isn't the major purpose of the amateur radio service, though many HFers
seem to think it is. The idea is to communicate effectively without wires.
Whether those absent wires would have been very long or relatively short is
a minor consideration to anyone except those doing propagation studies, or
to those who have a definite point to point communications need which sets
the distance to be spanned.

>What happened is that the technocrats took over, and rammed SSB with
>synthesized frequency control down everyone's throats.

Uh, right. Sort of like when our earliest ancestor climbed down out
of the trees and learned to walk upright. I suppose you object that
others followed him down out of the trees. Are you suggesting that
they had to be dragged kicking and screaming out of that primitive
womb? Sometimes it seems that way, even today, but I don't think
that's true. I think others used their own powers of observation
and intelligence to realize that the new methods *worked better*,
and adopted them, sometimes haltingly, out of self-interest.

>You are missing the point. Digital isn't better. It only works because
>of massive

>redundancy, transmitting the same thing over and over, or transmitting
>the information
>in a form with enough redundant information to allow reconstruction.
>Digital,
>and spread spectrum are really just brute force approaches.

I see that you don't fully understand information theory. Shannon proved way back in 1948 that simple repetition is a poor strategy for reducing the error rate. Coding intelligently spreads the energy representing a particular bit of information so that channel disruptions will only obliterate a part of the energy representing that bit of information, and allows it to be reconstructed from the remaining energy. This is a form of *diversity*, code diversity in this case. Rather than trying to brute force overpower interference, good digital technique works around, over, beside, and under the interference through diversity techniques. This allows it to operate efficiently at much lower power levels than a brute force technique would require.

>If you want instant, guaranteed connections, go play on the internet.
>Actually, I think that is where a majority of amateur radio license
>holder actually belong - enough of them seem to be trying hard to
>emulate those technologies on the amateur bands.

Oddly enough, many of the techniques used by the internet were pioneered first on radio, some of them by radio amateurs. But the wireline services adopted them wholeheartedly while many radio amateurs ignored the work of their pioneers and turned their backs on the superior techniques. This is an example of the deliberate backwardness demonstrated by too many current amateur radio operators of which Carl so frequently speaks.

>So, my recipe for rejuvenating amateur radio ?
>Forget the techno-geek stuff, too expensive. Forget the CW requirement.
>Instead spend time on simplifying and reducing the cost of the equipment
>needed
>to make *DIRECT* contact with people in strange foreign lands - forget
>satellites,
>that isn't REAL amateur radio (yes, it is interesting, and yes, I do
>play with them).
>REAL amateur radio is making those contacts without making use of
>intermediate
>high-tech-beyond-your-means items like digital repeaters in space.
>
>Philip - KC7FWB {ex FC7JAS, ex G8FVM}

Guess what? If you want to communicate *effectively* with people in distant lands, and do so reliably and at the lowest cost, you'll embrace those "techno-geek" methods, because they are the most effective, in terms of throughput, in terms of reliability, and in terms of economy. Why's that? Because that's what the "techno-geeks" *do*. Those are the goals being sought.

You have a choice, you can use backward, slow, unreliable and awkward techniques, or you can use elegant, fast, reliable and transparent techniques which require less brute RF energy to operate, and which allow more people to do the same in a limited spectrum. The NTIA said recently that we must demonstrate a willingness to use our current spectrum more efficiently and effectively if we are to hope to preserve it or gain more. Those are sobering words for those who wish to cling to the past in their use of inefficient technique.

Most pro-code hams would like to see a higher IQ/Hz bandwidth ratio
in HF bands. Importing a large quantity of new hams without commitment to the
service would be detrimental. To put them all on phone would be a
catastrophe! At least nitwits on CW use little of a precious resource, while
the blowhards on sideband buy linears to be heard.

3989. Realistic WX alert radio mods??

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-18 00:00:00 UTC
From: petrocjw@ucunix.san.uc.edu
Message-ID: <petrocjw-1812961553150001@192.168.1.2>
Source record: 209641
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc

Just wondering if anyone has a good idea on how to mod a Realistic WX alert radio model 12-140. It seems to use one crystal as a reference for the 3 WX service frequencies. I would like to know if I could drop a crystal in there to reference something in the 147.00MHz range so I could tune it to rx 147.060 and others in the area. I am also curious what the tones are that actually set off the alarm. I would like to set it to go off if someone does a long-tone zero on our repeater. If I knew what the tones were that set it off, I could program our repeater controler to emit those tones after a LTZ.

Anyone ever try this? Does this make sense. Please reply via email and posting if at all possible.

Thanks,
JWP

I disagree. Art is the art of communication. Science is the
technology of building mechanisms to communicate. Both components
are equally important, but amateur radio is not just about
technology. Hence the "international goodwill" clause.

Hi!

I'm currently using a VHF satellite network (Orbcomm) in remote monitoring application. My main problem is the size of the antenna which make it too visible to vandalism and thieft. The antenna I currently use is about 45 inch long and has 4 32 inch long radials. I'm looking for a small/compact antenna that could be hidden easily. Here are some specs:

Frequency range: 138-150 Mhz
Transmitter power: 5 watts
The gain can be unity or more
For some reason, in my application, the antenna need a ground plane (work ok without it anywhere else!!). I might be able to find a way to make it work without it so a built in ground plane is not important.

If anybody knows a manufacturer who has that kind of antenna, or a place where i could find some information about antennas, please E-mail me!

Thanks
Francis Taillon

What is the most important part of the amateur spectrum seems to vary from ham to ham. I will point out the obvious -- HF is NOT the part of the spectrum that is under pressure. The frequencies above 1 GHz are those that are under the closest scrutiny. Now, I will point out that when I was a lad, 2 meters was of little interest to most hams; we considered ham radio to be HF dxing. Relate that as you will to your own feelings about the potential loss of frequencies above 1 GHz.

I offer to all hams that we need to learn to separate our areas of disagreement (the Great Code Debate will continue unabated, I am sure) from those areas where we need to find common ground. It is the VHF, UHF and microwave operator whose needs must be met here. To quote somebody or another from US history, we will all hang separately if we don't all hang together.

Why should he not make a profit?

My barber performs the service of cutting my hair even
though I *could* cut it myself, or have my lovely wife do
it. I choose to pay the barber..... I hope he's bright
enough to make a profit from the service he performs.

I send in my own 610 but others may wish to take advantage
of the service offered by W5YI..... I don't endorse his firm, but
I hope he's bright enough to make a profit from the service
he performs. If the market does not feel the service is worth
the asked price, then I suppose the business will suffer a
loss. If the market is satisfied with the service at the offered
price, then the business may succeed.

John,

You probably mis-typed above, but the form for clubs is
610B, not 610A.

I've seen a model which doesn't interfere with the normal use of
the trailer hitch. Essentially it is a "plate" which places the
antenna off to the side of the trailer ball, and is held in place
by the bolt which holds the hitch-ball.

> Why should Ham Radio be any different?

Because entrance to amateur radio is controlled by a government enforced
regulation with the force of law. If I don't like your club, I can start my
own. If I don't like the laws, I can't just make my own.

(Pants-free riding wasn't on the Cal DMV motorcycle test last I checked.)

The amateur radio service is not club. The FCC is not in the business of issuing club memberships. You appear to consider learning CW as a type of hazing. This concept goes right to the top of my list of cottonheaded reasons to keep code testing. It beats out the previous number one reason - "People will perish on sinking ships if hams aren't required to learn code".

Like all other radio services, amateur radio serves the public interest. It is not a private playground. I don't believe that the morse code requirements of the current U.S. license structure are best serving the public interest anymore and should be changed.

No-code hams have not wrecked anything. Pro-coders and old timers regularly conduct the same type of unimportant communications with other hams and even use the auto patch to call home. (Personally, I despise the routine use of autopatches.) The bands may be more crowded but I challenge you to come up with any proof that the "lid per capita" is any higher now than it was before 1991.

You are right, Amateur Radio is not a private club, any person that takes the test and passes it can become a license holder. Most of the general public does not even take the time to vote in government elections, I doubt they could give a hoot about Ham Radio.

There are lots of government sponsored clubs, the first one that pops to mind are sport teams. The Green Bay packers are owned by the City of Green Bay, look at all the baseball teams that get big new ball parks from the government. I am sure the list goes on and on if one were to sit down and think about all the "clubs" that get money from the government. Ham Radio does not really get money from the government like other groups do, the only cost for the government is for record keeping and such.

If a person is not interested enough in the radio arts to put forth the small amount of effort it takes to get a license these days, then they do not deserve the privilege of using the Ham bands.

As usual, Steve has nothing to offer but lies and distortions. I have NEVER once advocated ANYTHING remotely resembling "play for pay" commercialization of ham radio ... I have said that our present packet system has become a joke, with the majority of people stagnated at a crummy 1200 baud AFSK and that we *should* be using minumum user speeds of 64kbps, perhaps even T-1 rates. That Steve equates to "Carl wants to commercialize the ARS" is indicative of his total lack of contact with reality.

What the hell are you talking about, Fritz???

Yes, there are some technical rules that are totally outdated and stupid in today's world ... but what "rules and regulations concerning modeling work and simulations being run before actual testing is implemented" are you talking about? I have NEVER seen anything in Part 97 requiring any such thing ... but, while it is reasonable to do some modeling and simulation before going on the air, it is impractical to require a ham to build and maintain a hardware/software channel simulator capable of "full-fidelity" modeling of the HF channel and its impairments ...

Demetre Koumanakos <demetre@intranet.gr> wrote:
>Does anyone know the advantages and disadvantages between
>the US 110 Volts and Europe's 220 Volts ??

110V is slightly safer, but I think the real reason we use it in the USA is habit. We started with 110V long ago (it's actually closer to 120V in most places) and it was too expensive to change.

220V is a little more dangerous; it's a little more likely to cause injury or death if you're shocked, and a little more likely to cause a fire if something else happens. The difference is minimal.

The bigger advantage to 220V is that less power is lost in the wiring. At 220V, the same appliance requires half the current. Power loss in wiring is proportional to the square of the current.

Incidentially, in most U.S. homes and businesses, 220V power is available for large appliances. (air conditioners, ovens, etc.) Most U.S. hams who use external amplifiers for more than 100W power use 220V to power those amplifiers.

>
>You can only communication in real time as fast as your typing speed.
>On the average, that's about twice what one can do on code. So what's
>the big deal?

The point is that, if I can transmit my data in a high-speed burst that takes 1/10 the time and the other side of the QSO transmits the same way, then we've used 2/10 of the available channel capacity ... that means that 8/10 of the channel capacity is available for other QSOs ... which would support 4 additional QSOs in the same spectrum ...

In practice, OOK Morse has such a low data rate (and the rate can be further reduced by a great deal by using more effective coding schemes than Morse) that, as has been discussed, it would be possible to support many thousands of simultaneous "CW-equivalent" QSOs in only 200kHz of HF spectrum. (The user interface could have the same "look and feel" as today's OOK Morse ... i.e. a key/keyer and a speaker/headphones that go beep)

>Can someone build rigs using these new modes from scratch
>on their bench?

Certainly ... why not? THe myth that only simple Morse transmitters and receivers are possibly built at home is just that ... a myth ... and it does ham radio a GREAT disservice ...

>If not, why are you advocating use of equipment that's
>out of reach of the homebrewers?

I'm not ... just set your sights a tiny bit higher ... you can do it ... try learning something new for a change ... I promise it won't kill you ..

>You scold the amateur community for
>not being technical enough, yet by wanting "new things that will blow
>away all of that stuff..." you're removing the lower rungs of that
>homebrew ladder. Bad boy.

Not so ... I didn't say that you can't build OOK Morse gear ... just refuted your claim that anything else is "too hard" ... I get accused of "whining" about the code ... I never said "it's too HARD ..." I just said it's a total waste of time ... stop whining and build something better than simple CW gear <grin>

I speak for myself. If ARRL doesn't like me identifying myself
to other people as an ARRL Local Gov't Liason, then they
can ask me to stop. Frankly, I don't see anything
I post as even suggesting that I or it represents an
ARRL officiial position. If, as an ARRL volunteer I can't
mention that I have a particular opinion on a subject, even if that
is counter to an official ARRL position I that would be a
form of censorship that I couldn't agree with.

As to Mt. Olive Township, it is my
choice to serve as a local gov't rep for hams in my township.
The township fathers need not give me permission nor do I
need to ask. No different than if I signed a post
in the rec.autos newsgroup stating I was Licensed NJ Driver.
The state of NJ has nothing to say about my using such
a signature.

Now back to the original issue: CW testing for HF access
in case anyone forgot.

Jim, my comment was directed at YOUR response to KC5WCP which
stated "Most Catholic Priests have given up having sex. Does that
mean all hams should too ?

The point, which you and others seem to continuously forget or
actively attempt to distract attention from is that none of us that
wish the end of CW testing have or want to see an end to your
using CW as a mode of choice. That, unfortunately, seems to need
constant clarification and focus as the pro-code folks continuously
attempt to suggest (as your direct quote does) that somehow the
end of CW testing is synonomous with ending CW use.

>But now that you mention it, I think you have an excellent idea. When the Coast
>Guard, MARS, and international coastal stations give up CW testing, then we
>should too.

Well the Coast Guard certainly stopped training their ops for
CW and with the end of that training (which certainly included
CW testing of some sort) then I'm glad you must now agree that
ham CW testing is no longer needed and should end immediately.
I don't now what MARS ever needed, but I also suspect that
few international coastal operators got their job without having
someow passd a CW test (assuming CW was needed as a
necessary skill).

>After all, NBC, CBS, ABC, the PGA of America, the NFL and the

>(Taken from the 1928 exam.)

Well, I suppose we could ask applicants to draw a schematic of
a complete 1928 amateur station, but I'm not sure just how useful
that would be in 1996 (or even 1946). The technical standards
and expectations were different then; a simple one-tube MOPA
transmitter and a one-tube (or maybe two) super-regen receiver
and power supply was common.

It wouldn't be that hard to draw the circuit and explain the purpose
of each component for a complete, current technology station. Take a
look at some of the QRP rigs, such as the 49er, 38 Special or such
like. And these can make contacts as well as the 1928 rig can, at
least. The same could be easily done for a SSB rig. But Jeff would
probably claim that you'd have to do it with tubes or discrete
transistors.

Many people would MUCH rather learn do that rather than acquire the
reflexes to use CW. They probably could do it faster, too.

BTW, making it work in the real world or coming up with a new design
would be more of a challenge. And grading grey areas or innovative
designs would be a real problem.

Sale in San Jose, CA.

*Kenwood TS450SAT: ($900 or best offer)
(Including addition accessories installed)
-High Stability Osc.,TCXO UNIT,Model SO-2 (paid $170)
-SSB narrow filter, YK88SN-1, 1.8kHz (paid $100)

*Bencher YA-1 Low Pass Filter, 50/52 ohm ($25 or best offer)
handles 1.5 KW continuous. (paid $60)

*foneFilter, F-1, Telephone filter ($5)

*Multi-band Inv-V/Dipole Ant. System ($100 or best offer)
-Alpha Delta DX-CC, a no trap 10 thru 80 meter, Dipole Antenna
-37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75".
Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, doesn't interact with
antenna like a steel mast would.

>KG2BX

Hello David;
I know noone wants to hear the old macho story about how
an induvidual completes an unbeleivable feat , but it was worth
the exercise and $$$ saved when I dug the base of my tower...
My tower is 80 ft , guyed, and the base is a 3 ft base section of
Rohn 25 sitting on 24 " of gravel (big chunks). My tower has
taken 2 direct strikes (I think that's all) and I could not ask for
a better ground as the rest of the shack remains unharmed. I dug
the hole with a post hole digger . Created a hole about 36" in DIA
and about 5 feet deep - so the top of the 36" section is flush with
the surface of the ground . Sitting on the gravel and who knows
how many miles of GA clay , the base is plenty sturdy after backfill.
Speaking of which : after you backfill you need to let the ground set
backup with frequent wattering.
I also had a guywire break once and the tower still hardly budged
I Have a 4 element Quad on a 30 foot boom up there .
Consider what ur putting up there first . and always listen to all the
great advice from those " who have been there - done that "

I've been very sucessful with inquires to the director of the DMV, it was Frank Zolin then but they are
very responsive to individual request and are trying to do a good job. It takes about 6 weeks to get a
response but if it makes sense they actually use good logic.

I wish when people advertised here that they would list their
location, and what kind of shipping arrangements are expected. I've
seen a few ads I'd like to respond to, but there's just not enough
info to make it worth the risk. Maybe I'm soured because a friend of
mine got ripped off buying a radio that was DOA from someone 1000
miles away, thanks to message conferences such as this.

The advantage of 220 is that with less current flow there is less loss for the same distance travelled down the wires. The advantage of 110 is that if you come across it you can survive, 220 is more likely to zang you.

>a bumper mount?
>
>

I have three basic suggestions. First is the Tenna Hitch, which attaches to the type of ball hitch used for towing a trailer or boat. They aren't usable while towing usually, but most people aren't constantly towing. They advertise semi-regularly in CQ & QST.

2nd, is the Dream whip magnet mount, which if you have a metallic roof, works rather well. The down side is that if you aren't careful, you will scratch the roof. Additionally on some vehicles, the body isn't bonded together well enough, so grounding straps have to be added to get an effective and consistent ground.

Third, the people who produce hamsticks, (Lakeview), used to have a mount which went off to the side of vehicles, preferably on the driver's side, on the underside. You take out bolts on the frame, and put in bolts which were slightly longer for it to work. Finding the bolts is/was the most difficult part, and usually, the dealer has or can order them in the proper length. You can also use a properly shaped piece of stainless steel in the same way, which is drilled to accept the normal 3/8 inch hardware, and drilled so that bolts can pass through and attach it to the frame. I even knew a silent key, who welded on a mount to the underframe in the same way. 73 de n8blk/3 -art clemons-

I think of Ham Radio as a club. Compair it to other clubs. You want to join a motorcycle club you have to do something to get in, to sort of "pay your dues" like ride through town with no pants on or something.

To be on the track team you have to work out everyday. Football players have rules they have to follow to get on the team. Name a quality group and they all have something you need to do in order to get into it.

Why should Ham Radio be any different? Ham Radio is a hobby, a club, not a right. Want to be part of the club? Then you got to pay your dues. Learning the Morse code is a tradition of the Ham Radio fraternity, it is a common bond that makes Hams different from other people on the street.

No code Hams have turned the two meter band into nothing more than a family intercom system, "honey, would you bring a loaf of bread home?" The same thing would happen to the HF bands. Every CB operator would get on the ham bands and soon that is what you would have, the same thing you hear now on a CB radio.

If you look at the roof of any hospital and those of many old houses, you will likely see a forest of groud rods. These are not to attract lightening. In fact they have an opposite effect, they are to discharge the surrounding air, reduce the build up of static electricity. About whether they should be sharp or not on the end, I think it is more that it induces people to believe subliminally that that is more likely to work.

Functionally, a good antenna ground may have a similiar effect. Often, lightening does not pick what you would consider the best path, but selectively seeks out something that might present a bit poorer path.

I once lived in a good place to study such effects and had a series of antenna structures. The results, involving lots of toasted coax, include these, given two choices a grounded beam and an pointy stucture of the same height, the beam was seldom hit because a greater pocket of discharged atmosphere tends to steer lightening away from itself.

Even without a cloud in the sky, the static that can build up is often enough to cause sparks in open connectors where the dielectric is missing. Some days, when I forgot to ground all the antennas, I would see quite a show at the connectors. The poping was sometimes loud enough to wake me up at night, and in the dark, if the fireplace had burned low enough, it was an unforgetable sight.

>> >Of all amateurs polled, members and non-members alike, Fifty four percent
>> >said yes to keeping the code, while thirty seven percent said no.
>>
>> This should end the debate for the next decade at least!

>Why?

Because Roland and his ilke believe that if you're not a Life member
of the ARRL your opinio does not matter. Even when they accept your
opnion, it usually had better agree with theirs. Sure the ARRL wants
to see code retained. The whole organization is rife with pro-coders.
No-coders are shunned and looked down upon. Still hasn't stopped me
from being a member.
The only way the organization will change is by changing the
membership. And that is done by joining and adding your voice to the
unwashed masses, until we become the majority. That is one of the many
reasons i was selected as the President of my local ARC. They know I
despise code, would never use it, yet I do not consider coders the
unwashed heathens that I am considered by some of the older members.
I just smile an keep in mind that these dinosaurs will die eventually
and hopefully won't infect too many young hams with their vile and
annimosity to their fellow unwashed no-code hams.

Yahoo for "morse". I use SuperMorse myself (v4.0 I think) as a morse code trainer. It's DOS, but runs fine under '95. NuMorse is OK but crippled to do a max of 10wpm, which may not seem like a problem, but it sucks to get your speed up to 10 and have to switch programs (unless you register NuMorse, of course). I think SuperMorse has the test questions as well, but I just buy the books at Radio Shack...

4046. Nut Control of 3894.5 kHz

No grave loss. Those V/UHF folks can always use 11m as a substitute for
the short-range comms they seems to be happy with.

When I was a kid the electric companies did not have truck-mounted augers and dug all of the holes for telephone and power poles by hand. I have watched them do many and remember well the tools they used. One long-handled spade was used (intermittantly with a very long crow-bar) to loosen the dirt (usually hard clay with imbedded rocks). Another long handled shovel had much of the blade formed to a ninety-degree angle so as to provide a means for lifting the loosened dirt out of the hole. As I recall the holes were at least six foot deep or considerably deeper. Two men would easily dig two or three holes per shift.

For a single hole I would expect you could make do with some jerry-rigged equivalents of the tools I described above. The technique is the thing. Loosen a few inches of the packed earth and then lift it out of the hole. And then just keep at it until you have reached your goal.

Eric, I have the PERFECT solution for you. Create a kill file
for YOUR browser & put ME in it.

I did this with blake bowers in early October & it works GREAT!!!!!
(did it for both fidonet & internet) Now Blake is the ONLY person
I have ever put in my "twit" filter, but it works quite well.

I never see an entry from the "twit". Tthe only thing that
occasionally violates the spirit of that action I set up is
when the "twit" make a big fuss (fool of himself) & other
users start to complain about the "twit" & forward messages
from said "twit" in their discussions.

4060. AEA2232 help needed

Newsgroup: rec.radio.amateur.misc

Dear friends,

My AEA DSP 2232 doesn't work right.
I'm getting on the LCD of the TNC the following,
Packet
Packet
and both lights DCD and CMD are on.

On the screen of the computer appears the following message when i communicate with the TNC,

cmd: 3d: DSP failed load software and sometimes cmd: 2d: DSP failed load software.

I dont know if the Microchip Motorola 56001zl20 is doing wrong or some statics on it or other.
How can I solve this problem..
AEA they say is in processof closing, so they can not help me.
Please some one do it.
Awaiting your kind comments, have my best.

Sale in San Jose, CA.

------------------For Sale-------------------------
($100 for all)

*Bencher YA-1 Low Pass Filter, 50/52 ohm ($25 or best offer)
handles 1.5 KW continuous.

*foneFilter, F-1, Telephone filter ($5)

*Multi-band Inv-V/Dipole Ant. System ($85 or best offer)
-Alpha Delta DX-CC, a no trap 10 thru 80 meter, Dipole Antenna
-37 foot Telescoping Mast, material is schedule 80 PVC Tubing,
in 4 sections, with O.D's: 3.50", 2.75", 2.25", and 1.75".
Mast is more durable and can withstand higher wind speeds than
a steel mast, when guyed properly. Also, doesn't interact with
antenna like a steel mast would.

4067. How to send umlauts with AEA Log Windows?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: Stan Huntting <stan@mutadv.com>
Message-ID: <01bbed4c$01972280$036085cc@stan.csn.net>
Source record: 209582
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

I'm posting this for Mark, W0BG (ex-WK0V), who has no access to this newsgroup. The reply-To address is Mark's.

Mark has an AEA PK-232 and uses AEA Log Windows in Windows 95. Mark has installed the ability to change keyboards in Windows 95 and has immediate access to umlauts and other accented characters, but they don't seem to work with his Log Windows/PK-232.

The umlaut will appear on his Log Windows screen, but is always translated to some other character before it reaches its destination - even when he just sends a test message to himself. Messages from his packet radio correspondents in Europe with special characters come through and are displayed in Log Windows without a hitch.

In the absence of any tech support from AEA I am posting this appeal for help for Mark here. Can you shed any light on what is happening here and/or how to send the umlauts?

Thanks es vy 73,

Stan

From: disalvo@mail.ohio.net
Message-ID: <59al5c$gk6$1@news3.microserve.net>
Source record: 209586

I just noticed today that if I touch the metal hardware on my MFJ-442C keyer while transmitting, I get burned. It feels more like a burn than a shock. It only does it on 80 meters when I'm switched to the antenna. If I transmit into a dummy antenna, everything seems fine. I checked all my grounds and they seem OK. Visually everything looks fine. Does anyone have any suggestions as to where I might start to solve this problem.

I don't know how long this problem has existed, I just noticed it today.

Thanks

>Now what you modulate onto your cw is sort of unimportant, it can be
>speech, TV, HDTV, digital communications ... anything.

>I just think (me, my personal opinion) is that the fundamental interests
>should still be communication and radio technology.

And I don't quite buy into this. On some engineering level, I suppose
data is data, but my understanding is that there are some non-trivial
issues that come up, when you try to say, stick you video camera into
the mike jack of your HT. The radio channel and propagation are weird
in a way that make for problems that depend on what kind of content
your trying to get through. Also, for the end user/ham, the content
is really what matters. I think the ARPS stuff is a good example where
the radio side is pretty straightforward, but that some fun and enthusiasm
seems to be happening.

>Well, they are still around. Some have gone, but some new ones have
>opened up.
>Some of the bands which were going to go through lack of use are still
>there,
>and still unused ...

OK, I can see this point. My thinking, though, is that the increased
sharing with other SS services is a real loss of privedges. I mean, if
the ham bands are filling up with noise from Ham SS that's one thing, but
what it feels like sometimes is that a small amount of ham narrowband stuff
is slowly sinking into a sea of noise from SS services and
other noisy gadgets. Does everyone get this? I wonder sometimes.

>The only chance you have to be first is to find something which is
>"cool" to you,
>but not cool enough to be worth billions as a product, or to have the
>forsight

Maybe my work experience is slightly relavent here. I spend all day, working
with game companies trying to make 'cool' stuff. It doesn't really cost
mega-bucks to do, and it doesn't make billions. (Though it has
funded a TS870 that I'm gonna' be getting soon.) My impression is that
cool new things are more common in the world, they aren't always that
hard to do, and they only rarely pay off big.

Perhaps what needs to nurtured in ham radio better is a culture of trying
to think of fun things to do with radio technology. It's out there. Like
how 'bout that guy who launched a TV camera in a model rocket. That's
truly amazing, I think. I wanna' know how many cameras he smashed trying
to get that together.

Part of it might just be that to get a new communications technology going, you need someone else to communicate with. Know what I mean? It sucks being first, if being first means there's no one else to talk to. This requires both a social organization and technical invention. Two abilities that only rarely both occur in a single human.

And most of them can be counted on in time of need. Unlike the
ADVANCED CLASS HAMS contesting on 14.325 during a hurricane last year.

Just one of the things I noticed while listening for traffic and
waiting for the ball to drop.
Sure, some Techs are ignorant of proper practice. Mostly because there
is so little mention of practices on the test. Not to mention the fact
that no self respecting ADVANCED CLASS HAM would lowwer theirself to
elmer, much less talk with, a TECHie.
I have met only one or two amateurs with higher grade licenses than
myself who waste their time talking technical or operating practice
topics with us lowwer classes. And that is how we are perceived by the
vast majority of HIGHER CLASS hams.
Me? I am ARES/RACES, President of the local club, active in 2m 70cm
dx, propogation studies, experimentation(on antennas), SKYWARN and a
host of leser activities aimed at improving the image of not only NO
CODE TECHies, but our HIGHER CLASS counter parts who look down on us.
The hobby is for ALL. regardless of class and regardless of how
predjudiced the other guy may be.

>a right. Want to be part of the club? Then you got to pay your dues.
>Learning the Morse code is a tradition of the Ham Radio fraternity, it
>is a common bond that makes Hams different from other people on the
>street.
I do pay dues. To my club, to the ARRL, to keep the repeater going. By
volunteering my time. By being technically efficient and knowlegable.
Not to mention courteous and kind to other hams.
>No code Hams have turned the two meter band into nothing more than a
>family intercom system, "honey, would you bring a loaf of bread home?"
>The same thing would happen to the HF bands. Every CB operator would get
>on the ham bands and soon that is what you would have, the same thing
>you hear now on a CB radio.
Not to mention 80/40/20 meters. :) Yeah that code sure defeats the
ignorance doesn't it! Sure there is lots of family oriented activity
on 2m. WHY NOT!?! 2m is mostly localized comms, or would you prefer to
see them us 160? Let's not forget that HAM radio is also FAMILY
oriented, or do those pesky kids sprouting up bother you like the
CBers do?
And you never hear anyone ever using two for dxing. Nope I never
talked 11 grid squares last week when the band was open. You never
hear those guys with DXCC(thats right DXCC not VUCC) working other
countries on two. Now where are those pesky downlinks for the
satellites??????? Duh.....two!
Yeah us TWOers sure are plug dumb and annoying and never contribute to
the hobby. Nope. And as soon as code is dropped and some advanced
class idiot jams my QSO on 80 I'm gunna hunt his dumb ass down and
show the FCC and ARRL what needs to be done with CW.

You know I often wonder why I get these urges to simply throttle the
living daylights out of some people,
Nope no one ever uses VHF/UHF for long range comms. Nope No one ever
DXs there. Nope I never talked to a small town 20 miles south of
Tampa, FL from Biloxi, MS.
Why do these ignorant HIGH CLASS HAMS always relate us Techs to CBers?
It's not like you never hear idiots on 80/40/20 on a regular basis.
Nope never happens.

Facts?!?!?!, How dare you use that word. You have no idea what facts
are.
I can dredge up all the postings that YOU did on rec.radio.scanner,
john.
there were a lot of them.It isn't that hard when someone out there on
the
web maintanes a very complete archive or postings for the last year!
I still say that you are in denial. so, I'll point out a few "facts" for
you:
1. the problems on rec.radio.scanner disappeared when YOU did.
2. you used derisive commentary and insulted others intellectual
capabilities
3. Your postings wer childish and arrogant
4. your memory (as often observed) is very selective
5. a lot of people posted extreme displeasure at having to read YOUR
drivel.

Are those enough for you?

>
> Regarding the banning from the Fidonet echo, I am PROUD to be one of the

You failed to mention that you disobeyed directives from the moderator
after several warnings (some of which were public). I was there,
remeber?
also, you must have been on a slow node, the number of messages did not

decrease.
AND, not that many people got kicked (as you claim). In point of fact, you
failed to prove yopur case then, and you give no facts to back it up now.

My point is: Go Away Mackey. you are a disruption that we neddn't have to deal with.

>
> BTW- Since the individual backed off, we then backed off too

Good point. I hadn't thought of that one... :)
Besides, who needs all those fancy pieces of paper (all they do is
clutter
up the wall). :)

However, for those of you who would like to see me advance...

I will be attempting to get the code out of the way in January.

I am keeping my fingers crossed.

4080. DC Computer Shows !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC

PC Fest is proud is announce the following Computer Show & Sale

Saturday Dec 21st Gaithersburg, Maryland

"Montgomery County Fairgrounds"

Take I-495 to I-270 North. Exit 11 (Fairgrounds). Make first right onto Route 355 (Frederick Rd). Turn right on Chestnut Street. Take right into Fairgrounds.

Sunday Dec 22nd Timonium, Maryland

"Maryland State Fairgrounds"

Take I-95 to I-695 (Baltimore Beltway). Exit 24 onto I-83 North to Exit 17 (Fairgrounds). Take right on Padonia road. Take Right on York road. The Fairgrounds is on the right.

TWO GREAT SHOWS, TWO GREAT SHOW LOCATIONS !!!

Toshiba, IBM, NEC, Hewlett Packard, Okidata, Sony, Texas Instruments, Iomega, Syquest, 3M, Western Digital, Seagate, TEAC, Fujitsu, Microsoft, Key Tronic, Epson, Intel,
and many other NAME BRAND products to choose from.

Local and National distributors

Memory, Upgrades, Systems, Software, Hardware, Accessories, and MORE!

SPECIAL ADIMISSION DEAL..... One paid admission grants access to BOTH SHOWS !!!
(Holiday 2 for 1 deal)

Presentations include: Voice activated computing, InterNet seminars, Web TV DEMO, New Cable WEB services by COMCAST!

Show hours 10AM - 4PM

Admission is $6 (A $1 off coupon is available on our website)

Children under 12 FREE (With paid adult admission)

For more information, and discount Coupon;

http://www.infi.net/~pcshows

Check out our Ads in the Baltimore Sun, Washington Post, Washington Times, FOX TV, and Colt Radio......Plus MORE!

> You are not even eligable to be a VE, not even close!
You have no real idea of what I can (or can't) do, John.
Perhaps you should look in the fcc.gov website under
their newsletter. Look up NAL's issued and NOV's issued
and key that to Phoenix. you will see what I can
do! Read the part about Tim Hoffman getting caught using my
call and the fact he got issued a %6000.00 notice of
apparent liability. Then, think on your statement.

There are plenty of others in here who are aware of what
happened and how is was taken care of. I think a few well placed
comments to the right people will keep a dangerous idiot
like you out of the VEC.

Basically, the smartest thing you can do right now is close your
mouth and start listening. I don't post much in here, and usually,
I have no reason to (unless I am asking a question). So, why
don't you take your drvel and go somewhere else?

Rgds,

Eric J. Oyen, Esquire.

4082. Re: Computer Power Supply for 12v mobile?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC

Most PC Power Supplies require a load on the 5volt or they shut down due to over-voltage on the 5 volt line. I have seen them work fine this way with just a
1/4 amp load. For the non-electronic folks, that a 20 ohm resistor, 2 watt minimum.

The +12v and -12v lines don't require a load.

There is callsign-to-email gateway. http://www.callsign.net
It helps your friend to remember your real email address.
Your firends just send email to your_callsign@callsign.net and
callsign.net forwards your email to your real email address.
Registration is free!
I think it's quite a nice way to do with callsign and email.

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS RTTY News Bulletin 938 08 December 199

[Sigh...]

This is the Australian National Anateur Radio Teleprinter Society

with our weekly RTTY broadcast. We transmit on the following

frequencies and times.

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)

7.045 MHz -3 0030 UTC VK2CTD (COL)

14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)

14.091 MHz 0030 UTC VK2DPM (ALAN)

146.675 MHz 0030/0930 UTC VK2JPA (PAT)

144.850 MHz (ax25 bbs) VK2JPA AT VK2WI

146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Enquiries to the society should be addressed to

the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,

N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA at

VK2WI. if you have any news or information for

inclusion in a subsequent broadcast then please send to the

Broadcast Officer, PO Box 60 Blacktown 2148 or address to

VK2JPA at VK2WI on 144.850 MHz. QSL cards can be obtained

by applying to the Broadcast Officer at the above

address with station identification, bulletin no., date

and the first news item or part thereof. In

Australia include s.a.s.e., if overseas include 1 IRC

for air mail.

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society.

A.N.A.R.T.S. News Bulletin 938 08 December 199

ANARTS HOLIDAY DATES.

PLEASE NOTE -- THE LAST BROADCAST FOR 1996 WILL BE ON 15TH DECEMBER, WITH THE FIRST FOR 1997 BEING ON 26TH JANUARY. WE WISH ALL THE VERY BEST FOR THE SEASON, AND HOPE YOU HAVE AS GOOD A BREAK AS WE WILL.

COLS COLUMN

I HAVE NOT HAD MUCH CHANCE TO USE THE COMPUTER THIS WEEK BECAUSE IT HAS BEEN TO THE DOCTORS. A SERIAL PORT HAD TO HAVE A TRANSPLANT. IT SEEMS TO BACK TO NORMAL BUT I AM TREATING THE PATIENT WITH ALL DUE CARE AND ATTENTION.

THE FOLLOWING ITEM APPEARED IN THE WA RAOTC NEWS A COUPLE OF WEEKS AGO. I HAD INTENDED TO INCLUDE IT IN THE CAST LAST WEEK, BUT THERE WAS NOT ENOUGH ROOM. HOWEVER, AS IT CONTAINS INFORMATION ABOUT THE MANUFACTURER OF ONE OF THE MOST POPULAR BRANDS OF MODEMS FOR RTTY ETC ETC MODES, HERE IT IS. THE SOURCE IS INCLUDED.

A.E.A. Out of Business.

Exclusive Story by 'Ham Radio Online'

A number of radio-related businesses in the United States have recently suspended their business operations or been acquired by others.

Ham Radio Online has learned that about one week ago, Amateur Radio equipment dealers received word from A.E.A. that the company would be suspending operations.

A former employee of A.E.A. of Lynwood, Washington, has confirmed to us that for all intents and purposes A.E.A. is now out of business. Friday, November 15th, 1996 was the last day of employment for the staff. During recent weeks, he said, A.E.A. attempted to find a buyer for the business but was unsuccessful.

According to reports, is selling out its remaining stock and, pledges to honor all existing warranties.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(29 NOVEMBER - 05 DECEMBER)

ISSUED ON 06 DECEMBER 1996

SUMMARY

Date 29 30 01 02 03 04 05

10cm 91 88 83 78 73 71 70

A 4 2 2 9 7 9 (5 ESTIMATED)

T 2 2 5 8 10 9 -18

SOLAR ACTIVITY WAS MODERATE 29TH NOVEMBER, WITH AN M1 FLARE AT 2044 UT; LOW 30TH, AND 1ST TO 3RD; AND VERY LOW 4TH AND 5TH DECEMBER.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 30TH NOVEMBER AND 5TH DECEMBER; QUIET TO UNSETTLED 29TH, 1ST AND 3RD; QUIET TO ACTIVE ON 2ND; AND UNSETTLED TO ACTIVE ON 4TH.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE MOSTLY NEAR PREDICTED MONTHLY VALUES. THERE WERE ENHANCED PERIODS TO 15 PER CENT ON 29TH NOVEMBER AND 1ST DECEMBER, AND DEPRESSED PERIODS TO 15 PER CENT ON 4TH TO 5TH DECEMBER. BLANKETING SPORADIC E WAS REPORTED ON 4TH DECEMBER.

FORECAST

(06 DECEMBER - 12 DECEMBER)

SOLAR: VERY LOW

GEOMAGNETIC: QUIET TO UNSETTLED

FREQUENCIES NEAR PREDICTED MONTHLY VALUES.

Ohio/Penn DX Bulletin No. 281
Thanks to the Northern Ohio Amateur Radio Society, Northern
Ohio DX Association, Ohio/Penn PacketCluster Network, N2UCK,
W2IJ, NG3K, K7WX, KR8V, K9BG, KY0A, DL2HBX, DL5EBE, EA3KU,
G4BUE & DX News Sheet, HL2KAT, JA1QGT, JH4RHF, JP1ROA, OH2BH,
ON6TT and VE3BW for the following DX information.
3V8BB REPORT (by DL2HBX op). ULI, DL2HBX, would like to thank
fellow contesters and DXers for all the CW QSOs during his
stay at 3V8BB, between November 21 and 26th. He managed 7500
QSOs out of which 4400 were in the CQWW DX Contest breaking
the old Low Power World Record.
6Y, JAMAICA. Begin looking for Alan, G3XAQ, starting December
3rd as G3XAQ/6Y5. His operation will be on until December
12th with activity on CW only 160-10 meters using an IC-706
with 100w and dipoles. QSL to his homecall.
7Q, MALAWI. Chris, W1EH, in Lilongue, has been very active as
7Q7EH on RTTY this past week. Check around 14085 or 21085 kHz
+/- 1 or 2 kHz between 1600 and 1000z. QSL via AA9HD.
9J, ZAMBIA. Vlad, ZS6MG, will be here December 1st, and will
stay there for 7 days. His possible callsign will be
9J/ZS6MG. Operations will be from about 1700z until late
evening (2100z). He will mainly operate on 40 meters CW, but
he will try his best to be active on 80 meters as well as

20,15,10 meters. QSL via ZS6MG: Vladimir Karamitrov, P.O. Box 1788, Bramley 2018, Rep. of South Africa.

C6, BAHAMAS. Gary, KR8V, will be active during the ARRL International DX - CW Contest, February 15-16th, 1997, as KR8V/C6A from Treasure Cay, Abaco, Bahamas as a single op entry. Also, he will be active before and after the contest on all bands 10-80 meters, primarily CW. QSL to home call direct or via buro.

HB0, LIECHTENSTEIN. Seiji, JA1QGT, will be active as HB0/HB9LEY from December 14-15th. Operations will be on 80/75/40/30/20/17/15 meters with activity on CW/SSB (mainly operating 80m CW & 30,20,17 meters long path to JA). QSL via JH1BSE.

QSL NEWS AND INFO......

Roman, N2UCK, reports that as of November 8th, he will be Sergey Popov's, RN3QO, QSL Manager. QSL via callbook address.

QSL route for JT1BH (Thanks to JP1ROA) is via:

P.O.Box 791, Ulanbator, Mongolia

EA6IB, recently active in the 1996 CQWW CW Contest (and also for 1995 CQWW CW Contest) can be QSLed to: Fernando Martinez, Box 69, L'Ametlla de Mar 43860, Tarragona, Spain or to EA6FB.

QSLs for V59T for 1994, 1995 and 1996 are as follows:

1994 - W2IJ (ex-WA2FIJ, CBA in California good for last 7 years)

1995 - V51GB (direct or bureau)

1996 - N2AU

V6, MICRONESIA. HL1IWD, (Sung Ki, Lee), will be active as V63CT from Pohnpei Island (IOTA OC-010) from December 5-16th. He will work for an eye specialist there during his stay. Activity will be on SSB (3795, 7060, 14260, 21260 kHz). He

will also be active on CW from 0400-1200z.

VK9L, LORD HOWE ISLAND. Tetsu, JE5FLM, and Hide, JR5XPG, of the Kagawa DX Group will be active December 26-30th, as VK9FL and VK9PG, respectively. Activity will be on 80-10 meters and possibly some 160 meters, with operations on CW/SSB and the satellites AO-10 and AO-13. QSL via CBA.

The following appeared in the wa news of November 25th

WILL PALESTINE BECOME A NEW DXCC COUNTRY?

Referring to a DXpedition to Palestine in June 1996 which included operators: JA1UT, JA1UPA, JA8CDG, JA8RUZ/KH2Y, and G3NOM, the writer continues:

This group made over 6000 QSO's and included RTTY operation by Ray, G3NOM. In a message from Ray, he explained that the operation was linked with a United Nations aid project to improve communications between certain hospitals and ambulances in the Gaza area, and to establish communications at the newly constructed Palestine International Airport.

One highlight for the group was that team leader JA1UT was able to meet with President Yassar Arafat and a Director General of the Ministry of Posts and Telecommunications. The President thanked the team for their aid work, and they discussed amateur radio activity. Apparently, President Arafat displayed a surprisingly detailed knowledge of Amateur Radio. It seems that several years ago, Mr Arafat was onboard an aircraft that crash landed in the desert. Radio amateurs received a 'Mayday' call and initiated a successful rescue operation.

Enquiries to the society should be addressed to

the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,

N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA at

VK2WI. if you have any news or information for

inclusion in a subsequent broadcast then please send to the

Broadcast Officer, PO Box 60 Blacktown 2148 or address to

VK2JPA at VK2WI on 144.850 MHz. QSL cards can be obtained

by applying to the Broadcast Officer at the above

address with station identification, bulletin no., date

and the first news item or part thereof. In

Australia include s.a.s.e., if overseas include 1 IRC

for air mail.

Views expressed in this news bulletin are not necessarily those of the Broadcast Officer, the Relay Officers, or of the Society.

A.N.A.R.T.S. News Bulletin 939 15 December 1996.

A VERY MERRY CHRISTMAS TO ALL

FROM ALL AT ANARTS, WE WISH YOU THE COMPLIMENTS OF THE SEASON AND A SAFE AND PROSPEROUS NEW YEAR. MAY ALL YOUR CHRISTMAS WISHES COME TRUE.

ANARTS LAST BROADCAST FOR 1996 WILL IS TODAY 15TH DECEMBER, WITH THE FIRST FOR 1997 BEING ON 26TH JANUARY. WE HOPE YOU HAVE AS GOOD A BREAK AS WE WILL, AND WILL BE BACK CHIRPIER THAN EVER IN 1997.

CHEERS FROM PAT VK2JPA, BROADCAST OFFICER

COLS COLUMN

AS THIS IS OUR LAST BROADCAST FOR 1996, I TAKE THIS OPPORTUNITY ON BEHALF OF ANARTS IN WISHING ALL OUR READERS, A VERY MERRY CHRISTMAS AND A HAPPY NEW YEAR.

THIS BROADCAST IS NOW TRANSMITTED ON THE FOLLOWING, 80, 40, AND 20 METRES HF, 146.675 2 METRES, THE VKNET VIA PACKET RADIO, VIA THE INTERNET COURTESY OF DAVE VK2KFU AND ON AMATEUR TELEVISION COURTESY OF THE GLADESVILLE AMATEUR RADIO CLUB. IT IS ALSO RELAYED IN W.A. BY THE W.A. RADIO AMATEUR OLD TIMERS CLUB, AND ALSO IT IS TRANSMITTED IN THE NEWCASTLE, NSW, AREA ON HF DURING THE WEEK USING RTTY MODE. SO ONE WAY OR ANOTHER THE CAST IS SEEN BY QUITE A NUMBER OF STATIONS.

ONCE AGAIN TO ALL OF YOU WHO TAKE OUR CAST, THE COMPLIMENTS OF THE SEASON TO YOU ALL AND I HOPE YOU CONTINUE TO TAKE OUR CAST EACH WEEK.

A BIG THANK YOU TO ALL THE ANARTS RELAY OFFICERS, DAVE VK2KFU,

AND TO GLADESVILLE A.R.C. THANKS ALSO TO CLEM VK6CW AND TO THE NEWCASTLE STATION WHO TRANSMITS THE CAST THERE. ANOTHER THANKS ARE DUE TO PAT VK2JPA OUR BROADCAST OFFICER FOR BRINGING US THE CAST EACH WEEK AND FOR BEING OUR SECRETARY.

1996 HAS NOT BEEN A GREAT YEAR FOR OUR HF RELAYS, IN FACT IT HAS BEEN QUITE AWFUL. BUT BEING AMATEURS, WE ARE OVERFLOWING WITH OPTIMISM AND LOOK FORWARD TO THE WONDERFUL PROPAGATION COMING OUR WAY IN 1997.

THE ANARTS CONTEST THIS YEAR WAS AS, YOU KNOW, THE BEST SINCE JIM VK2BQS BECAME THE CONTEST MANAGER. I THINK IT HAS BEEN DUE TO JIM'S EFFORTS OVER THE YEARS THAT HAS MADE IT SUCH A GREAT SUCCESS. THANKS A LOT JIM AND I AM LOOKING FORWARD TO THE 1997 CONTEST.

THATS ALL FOR THIS YEAR, SEE YOU IN LATE JANUARY, OH AND BY THE WAY, IF YOU CAN TUNE IN ON CHANNEL 35 IN SYDNEY TO THE GLADESVILLE A.R.C. THEY WILL BE TRANSMITTING THE VK2SG DXNOTES DURING SOME OF THE TIME THAT THE ANARTS BROADCAST IS OFF AIR DURING THE FESTIVE SEASON. THE DX NOTES ARE SHOWN ON A MAP OF THE WORLD ON THEIR TRANSMISSION, ANOTHER GREAT JOB. FOR TRANSMISSION TIMES CALL VK2ZZO ON 146.925 MHZ.

SO FOR NOW 73S AND IF YOU MUST DRINK, PLEASE DON'T DRIVE

DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(06 DECEMBER - 12 DECEMBER)

ISSUED ON 13 DECEMBER 1996

SUMMARY

Date 06 07 08 09 10 11 12

10cm 70 69 69 74 72 78 81

A 2 5 3 10 21 13 (10 ESTIMATED)

RTDX1206 RTTY DX

VK2SG RTTY DXNOTES FOR WEEK ENDING 6 DEC. 1996 (BID RTDX1206)

This weekend sees the first FAIRS HF DX Data contest which runs from 000Z Saturday 7 December until 2400Z Sunday 8 December. Single operators are limited to 36 hours, on the usual contest bands. The rules have been posted on the 'wf1b-rtty' and the 'digital-dx' reflectors. If you missed those postings, and want them send an e-mail to w2jgr(at)millcomm.com

Our information this week came from G3ZYP, GB2ATG, DJ3IW and the Central Europe DX Cluster DB0SPC, I5FLN and the IK5PWJ Packetcluster, OH2BUA, W5KSI, WB2CJL, ZS5S, 9K2HN, and the

NJ0M Node of the Twin Cities DX Packetcluster Network.

Notes of Interest:

REMINDER: Get ready for the 8 hour TARA RTTY Sprint contest next weekend. It runs from 1800Z Saturday 14 December until 0200Z Sunday 8 December.

BELIZE, V3 - Wondy, K5KR; Stan, W5JYK; and Mike, W5ZPA will be QRV from Belize, 11-16 December on CW, SSB, and RTTY, with three stations. They will operate 10, 12, 15, 17, and 20 meters. If they have the room they will try to put up antennas for 80 and 160 meters. The calls will be: Mike, V31MP, QSL to W5ZPA; Stan, V31YK, QSL to W5JYK; and Wondy (Call to be issued), QSL to K5KR. QSL with an SASE.

KUWAIT, 9K - If you need Kuwait on RTTY, you can set up a schedule with Hamad, 9K2HN, for his home station, by sending him an e-mail at morpheus(at)moc.kw .

The VK2SG RTTY DX Notes are also available on the Internet at reflector digital-dx(at)st.rim.or.jp . and the OH2BUA Webcluster at URL http://www.clinet.fi/jukka/rtty.html

For next week's bulletin send your bandpass and notes of interest to Luciano I5FLN @ZS5S.ZAF.AF

Ohio/Penn DX Bulletin No. 280

Excerpts

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AE4AP & The DX Bulletin, N4AA & QRZ DX, W5IJU & Island/DX News,

KH6BZF, DF4RD, F6AJA, G3NYY, G4BUE & DX News Sheet, JA1IDY and Japan DX News for the following DX information.

HK0, SERRANA BANK (Colombia). Pedro, HK3JJH, was to be active from here this past weekend but had to postpone this operation because of bad weather. Next possible operation from IOTA NA-133 may be next December 22nd or January 1997. Pedro may also activate Roncador Key (NA-133) and Serranilla Bank (NA-132) during this same time frame. All of these operations are reportedly scheduled to last only 6 to 8 hours.

JD, OGASAWARA (Chichi Island, IOTA AS-031). JA operators will be active from here December 23-25th. Look for JA4GXS/JD1, JF4LNO/JD1 (a YL) and JN4AWW/JD1 to be active on 160-10 meters SSB/CW. QSL via JA4GXS. Meanwhile, 'QRZ DX' reports JA8FCG will join Eiji, JQ1SUO, in operating from here December 16th through January 3rd (Refer to OPDX.270). Both will sign homecall/JD1. They plan to be active on all bands CW and SSB. QSL via respective homecall.

KH6, HAWAII. Mike, W7DRA, who has retired from Boeing recently and was active on 80 meters in last weekend's CQWW Contest as W7DRA/KH6, states he will also be active from Kaual, Hawaii, during the upcoming ARRL 160 meter Contest. Look for him on 1804, 1808, or 1843 kHz.

S7, SEYCHELLES. Paddy, S79MAD, can often be found with Randy, WX5L, at 1300z on Sundays on 14086 kHz (RTTY list operation). QSL via GW4WVO.

T9, BOSNIA-HERZEGOVINA (UPDATED by KH6BZF). Dave, T9/WA5IKQ, is located in Camp McGovern as the AT&T site engineer. His location is not far from the city of Brcko, Bosnia north of Tuzla. He is active on the SSB and CW, mostly on 80-20 meters. Dave's logs have been arriving at his QSL Manager's QTH (KH6BZF via CBA). Please SASE or SAE + IRCs for returns.

Please no bureau QSLs.

ARLD054 DX news

This week's bulletin was made possible with info provided by Tedd, KB8NW, The OPDX Bulletin, 425DX News, The 599Rpt, Hamad, 9K2HN, Bill, NG6Z, and Contest Corral from QST. Thanks to all.

MALAWI, 7Q. Chris, W1EH, has been very active on RTTY lately as 7Q7EH. Check around 14085 or 21085 kHz between 1600 and 1000z. QSL via AA9HD.

ERITRIA, E3. Jin, JF1IST, is leaving for Eritria on business. He already received operating permits for both amateur radio and business. He hopes to be active on most HF bands. Some satellite activity is also planned. QSL via JH1AJT.

ANTARCTICA. Nikolai, UA3YH, is active from here until February 5. QSL UA3YH/KC4 via RW3XA. When operating as KC4AAA, QSL via NC6J.

MT. ATHOS, SV/A. Monk Apollo, SV2ASP/A, has been active over the past week. He will try to work as many stations as possible this winter season. Amateurs can also expect some 160 meter activity.

4087. CEPT operation in the UK

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: prs@oasis.icl.co.uk
Message-ID: <59b7s1$ffe@ozz.oasis.icl.co.uk>
Source record: 209602
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

Overseas amateurs operating in the UK under the terms
of the CEPT licence should use 'M0' or 'M1' as the prefix
before their own callsign. It appears that some are
unaware of this and are still using 'G' prefixes. UK
amateurs hearing an overseas amateur operating in this
country and using 'G' prefixes should politely inform them
of the correct prefix to be used.

I don't know how AEA implements umlauts, but you might try turning off
huffman compression since the umlauts (in IBM) are above ascii 127. Also
make sure your serial interface is 8-bit.

CQ Netters,

Does anyone know the advantages and disadvantages between
the US 110 Volts and Europe's 220 Volts ??
73

Well am not sure of any advantage or disadvantage of one or the other
but I do remember some Islands in the Carribbean had voltages of
440 VDC as standard but dont remember which Isles though. That was
a real advantage to Hams, as they just filtered the line voltage,
and applied it direct to Tube type ham gear at least to the Xmtrs.
After all a bunch of 807's or 811A's in parallel with 440DC on their
plates, could produce a good chunk of RF. I thought that was a
unique power grid at time I was stationed down there during WW2
Joe (aka kilroy)

Anthony R. Gold (tgold@microvst.demon.co.uk) wrote:

: I believe that you misunderstood why I explained to Thomas that he
: may operate only between 144 and 146 MHz, even when he is operating
: under an FCC Reciprocal Permit in ITU Regions 2 or 3. Thomas's
: restriction in this regards is in no way related to the reduced
: privileges of the holder of an FCC license in ITU Region 1.

: As you agree, Thomas must operate (when in Florida) within the US
: regulations for an Extra Class Licensee located in ITU Region 2 and
: also within the privileges of his home license.

As fas as I know, that is not the case. First Thomas' license is NOT valid
in the U.S. Since the U.S. has a reciprocal operating treaty with the country
that issued his license, he will be issued a U.S. license based on his
home license and the treaty. His license is a reciprocal operating permit
because it was not based upon his passing a test.

His U.S. license will have a class of it's own, based upon the FCC's guess
of what U.S. requirments he fulfilled. It will also have a callsign of it's
own and an expiration date of one year or when his license expires which
ever is first.

He will have all the privledges and restrictions of the U.S. license class
issued to him. For example if he is issued a tech plus license he can
operate cw on the novice bands, ssb on 10m and 6m on up. If he is in florida
for example, 2m is 144-148 mhz, 222-225 is ok, etc. If he were on a U.S. ship
in the mediteranian sea, 2m would be 144-146, and there would be no 220 band.

His call sign would be W<district>/origninal call sign. The district is picked
based on where he will operate. I don't know how they do it if you travel.

He would id according to u.s. regulations. So he can get on a repeater and
say this "w4/xxxx or xxxx or thom or fred (or anything else he wants)
listening" as long as it is not his official id which has to be at 10 min
and the end of a conversation.

When I was in philadelphia, once the people on a repeater knew you, the
full w3/.... callsign was used only for id. A foriegn ham normally threw
out their original call.

73,

Geoff.

Actually, the people haven't spoken, people motivated enough to vote in a poll which was announced and described in QST were the ones who voted. If you had asked most people who might be interested in amateur radio, you might get different results. If you asked active hams, you might once again get different results. I note that the ARRL doesn't claim it's a random poll of amateurs, just that it's a poll. You might want to consider what would happen if you based your predictions of the 1996 presidential elections on a poll of attendees at the republican convention, and how accurate that poll would be.

Whether or not hams who enjoy code want to admit it or not, the majority of amateur radio doesn't involve or need international morse code. I've also been a ham long enough to remember that there are lots of Dick Bash hams, who memorized not only the questions and answers likely to appear on the exam, but answers to code tests too. I know at least two extra class hams from that era, who don't realize that they're being called on cw if I send at 4 wpm. I don't even like cw, and I guarantee that if you send my callsign at 25 wpm, I'll recognize it, I might not copy 25 wpm reliably, but my call I do. I'm never going to love code, and most hams don't use it either. I don't favor banning it, but neither do I think that because I passed a code test in 1979, that newer hams should have to do the same thing. If you enjoy code, fine, but it's no longer state of the art, and almost every other service has found other ways to communicate reliably.

One advantage to the higher distribution voltage is in building construction - the wires for distribution circuits could be smaller, yet deliver the same energy. There would be savings in copper costs.

> >bands ... that spectrum is largely unusable much of the time ... and
> >when it is usable, most of it is CW-only for techs ...

Wow... I work those segments a lot. I have 41 states on 40, WAS on 10 ssb, 46 states on 15, I don't know on 80 (but it's a great band at night), and 35 states on 10 rtty. 10 ssb in the nov/tech segment is the busiest part of 10 meters, and there have been regular openings all through the bottom of the cycle.

He didn't dispute that it couldn't be done easily, but rather one usually crawls before they walk or run.

> Why do CW TX builders have to make it sound like anything else is
> "beyond anyone's capability" just because all *they* want to build (or,
> is it "know how to build") is a bare-bones CW TX???

I don't think that what they're saying. As a builder myself, I wouldn't recommend a beginner to jump right into a superhet RX or SSB TX. This isn't to say that they won't try it once they learn a little and see how easy it is to build.

> >> ... most of the prospective "Elmers" are too damned afraid
> >>of technology to try anything more interesting than a single transistor
> >>CW transmitter ... how sad and pathetic ...

You put a lot of words into others' mouths. Once an elmer (I never had one, but what the heck) teaches someone to build something simple, are they supposed to hold the student's hand forever? No, they point them into the direction the student desires and then lets them go off on their own.

> >Think of building CW gear as the first step up a long ladder of homebrewing.

> >ones able to climb that ladder.
>
> My point is that it's NOT such an insurmountable step ... it's *really*
> not that hard at all ... *try* it ...

Jeff is right. He didn't say that it was impossible, or even very difficult, but a CW TX is an excellant _START_.

> >When one has built a radio and used it to work stations thousands of miles

> >will continue into a lifetime of building.
> >
> >>Try to put aside your fears of the "complicated" and unknown ... only in
> >>that way will you ever discover the "real" ham radio ...

Dude, you obviously don't know Jeff. He builds a LOT of stuff, much more complex than a CW TX. He has no fears, and nor do the rest of us who build stuff. The point is that it isn't an elmers job to teach a beginner how to build fission reactors.

> >Real ham radio is whatever niche we have found and enjoy.
>
> Translation: I like CW and I'm not interested in trying anything else
> .. it might be too hard ...

I don't understand how you made that translation. Ham radio is multi-faceted, and everyone isn't going to find the same things interesting...thank goodness.

4100. >> Delaware QSO Party <<

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <59bjng$gqb@copland.udel.edu>
Source record: 209665

Finally - the Delaware QSO Party!!

Sponsored by the First State Amateur Radio Club

Who - All radio amateurs in and out of Delaware

When - First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Sat.)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sun.)

Where - Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice and Technician freqs: 25 kHz above sub-band edge

How - Work stations once per band and mode.
Exchange signal report and QTH (county for Delaware stations;
state/province/DXCC country for others)

Scoring - There is ONE CLASS for all stations.
Count ONE POINT per PHONE QSO.
Count TWO POINTS per CW/RTTY/Digital QSO.
Multipliers/special event stations: NONE.

Awards - Certificates will be awarded in the following categories:
Within Delaware: first, second and third highest score.
Within each Delaware county: highest score.
Others: first, second and third highest scores.
Further prizes and certificates may be awarded, depending
upon participation and merit.
Certificates and prizes courtesy of Ham Radio Outlet, Delaware.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc.
P.O. Box 1050
Newark, DE 19715

Include SASE for results.

E-mail inquiries to radio@udel.edu.

Thanks and LET'S GO DELAWARE!!

What do you mean by 35%? I guess I view it as a much smaller percentage, since there is more spectrum available on 6 meters than all the HF bands combined.

> >The beauty of ham radio is that there is
> >plenty of room for everyone with all varieties of skill sets.

> Yes, room at the back of the bus (Cec) for those who are not native CWans.

How is that the back of the bus? A tech has privs on almost all of the spectrum... clearly HF access is just a drop in the bucket in terms of spectrum access. If anything, HF ops are in the back of the bus.

Strange, I recently got the relevant leaflet from the Radiocommunications
Agency and it says:

"You should use your home call sign after the UK prefix 'M'
and secondary locator if any. Thus a Dutch amateur holding
the call sign PA2MIL would identify in England as M/PA2MIL
and an Austrian amateur holding the call sign OE7PBK would
identify in Wales as MW/OE7PBK. A full list of secondary
locators is given in note (w) of the UK Licence Booklet."

(I have the booklet and it doesn't say anything about M0 and M1.)

Hi Scott.
I'll second Mark's comments on programming. It programs a bit differently, but works well. Once you learn their programming methods, it's not too hard to do. I also have their PCS-7500H 50 6 meter mobile. Again, programming is strange, but it works well.

There are idots everywhere. God loves stupid people. That's why he makes
so many of them.

You should be able to talk from Biloxi, Ms. to Tampa, Fla. with two bean cans
and a string.

Two meters is basically a short range band. We know about the openings,
but we don't sit around and wait for them. I have been listening to 2 meters
for 13 years and have never heard anything that was farther than 15 miles away.

(With the exception of satellites).

Giga hertz is for giga squirts.

Real hams do it on the low bands.....

I haven't opened up this version of the radio, but I converted several of the weather cubes that RS used to sell. All that was required on them was changing the resistance of the reostat on the tuning circuit, I don't remember the exact values, but they used a variactor which had enough range to get down to the 2 meter band.

4108. Join the ARRL!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: Dave Hockaday <wb4iuy@ipass.net>
Message-ID: <32B987AF.5389@ipass.net>
Source record: 209673

I've read and followed Dave Sumner's work for several years. I think he's a fair and hard working guy, just like the rest of the ARRL staff I've been in contact with. I think that the negative comments I've read on this newsgroup have been ill founded and in bad taste.

I think the ARRL serves the Amateur community well, and better than any "grass-roots" groups could. They are professionals and are our voice to the FCC. I've always found them to be helpful when I had questions.

Like any organization, they can't always give you the answer you want to hear. Occasionally I've been unhappy with a rules change, etc. that they've made, but I realize that they are working for the good of all amateurs, not just me.

I enjoy QST (although I wish it had fewer advertisements and more technical stuff, or just more technical stuff), and I use their QSL buro a lot. The buro saves me a lot of $$. I participate in their operating events (can't wait for the January VHF contest!), and utilize their bulletim service all the time.

I think it's in the best interests of us all to be a member of the ARRL. They need our support, and we need theirs.

Hi Bill. What is the Canadian phone allocation for the 80 meter band? There was a VE something phone op on 3.720 about a week ago raising all sorts of noise about US novices operating in "his" phone segment.

4110. AEA product repairs?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: n9ssg@techinter.COM
Message-ID: <19961219154525.AAA17477@n9ssg.techinter.com>
Source record: 209675

With the recent events at AEA, has anyone heard an update? Where can we send products for repair?

Originally, AEA said we were to call the ARRL. They did this without the ARRL's knowledge and now the ARRL does not answer any questions regarding this.

I'm interested in out of warranty work, but I'm sure the people with warranty product are in the same boat.

Dave

[snip totally incorrect beliefs about regulations]

You are totally wrong. Under the reciprocal program the FCC does not
issue licences with classes, they issue a PERMIT (not a licence) and
it allows the holder to operate within whatever privileges are common
to the station's home licence and a US Extra Class license in that
ITU region. If you have access to the FCC regulations, please refer
to S 97.107(b) where this is all spelled out in clear detail and in
very simple language.

The idea that someone at the FCC guesses what US license class an
alien's home license is equivalent to is charming, but it is a
totally misunderstanding of the very straight forward written FCC
Rules which every US license holder and permit holder should posess
and be able to understand.

>the country that issued his license, he will be issued a U.S. license
>based on his home license and the treaty.

This is an old thread, so in case anyone still cares, the answer is so simple. There's even a question on the Extra exam about it! If the country of origin has a reciprocal agreement with the U.S., the foreign ham will be issued a Reciprocal Operating Permit. He should sign his call with the appropriate Wn/XXXXX nomenclature, i.e.: W2/BY1AA (of COURSE China doesn't have the agreement; example ONLY).

There is no test, there is no U.S. "license" issued, nor is there a special callsign. The foreign ham's privileges are limited to the INTERSECTION of his privileges in his home country AND those of a U.S. Amateur Extra class ham. So, if he can operate voice on 7050 at home, he can still operate on that frequency here BUT only on CW/data as dictated by our band plans. If he can operate on 4100 at home, he can't do that here. Get it?

Other guy wrote:
> When I was in philadelphia, once the people on a repeater knew you,
> the full w3/.... callsign was used only for id. A foriegn ham normally
> threw out their original call.

That may have been nice on 2m when yacking with the boys, but it wasn't proper operating procedure. Clearly, nobody would have thought that you were actually hitting the local repeater by bouncing your signal over the "pond," but you WERE operating in this country under the terms of the reciprocal agreement, so you were not in accordance with its rules.

While you have that receiver open, can you give us any details of what's inside? Years ago, I had a Radio Shack weather receiver, and it amounted to a FM BCB receiver, moved to the weather channel. It was varactor tuned, and went to a 10.7MHz if. The filtering there was only IF transformers, no ceramic filters.

I had assumed that the weather receivers of today were a fancier design. But I bought some scrap hand held CB sets recently for parts, and their built in weather receivers had a single conversion design, and the crystal does not translate to any standard IF frequency. I need to do some more calculating to figure out what's going on.

Is there a second conversion in that weather receiver? You should be able to uncover that information by looking for a second crystal elsewhere on the circuit board.

Are there any ceramic filters? If the circuit fits the usual pattern, there'd be one at 10.7MHz (maybe marked with that number), which might look like a ceramic capacitor except it has three leads. Then maybe there'd be another filter, in a square plastic package maybe, most likely running at 455KHz. I have no idea whether this presumption is valid, but if it's a good quality receiver, then it probably would be double conversion 10.7MHz/455KHz and most likely at this date uses an IC for the IF strip, if not for the whole receiver.

This information would be useful to others. If the circuit is double conversion and uses ceramic filters, then they are well worth converting to 2M use, and would provide a cheap means of getting a 2M monitoring receiver, which many seem to desire.

If it's a much simpler circuit, it still might be useful in some cases, but less so and not something that I'd spend much money on.

> > > Does anyone know the advantages and disadvantages between
> > > the US 110 Volts and Europe's 220 Volts ??

Contrary to common belief, every house in the USA has 220 Volts coming into the house. Three wires actually, dubbed Hot-1, Neutral and Hot-2. The voltage between each of the two hot wire and neutral is 110 Volts, the voltage between the two hot ones is 220 Volts ...

> One advantage to the higher distribution voltage is in building
> construction - the wires for distribution circuits could be smaller, yet
> deliver the same energy. There would be savings in copper costs.

In Europe, there are central transformers that transform the high voltage from the overland lines down to 220 ... And it is often miles, that these 220 V have to travel before they reach the consuming unit.

In the USA nearly each house has its own transformer on some pole on the street, transforming several kilovolts (was it 38,500 or 58,500 Volts?) down to the consumption voltage. The 110/220 Volts then travel maybe some 100 or 200 feet (30 or 60 meters) ... Basically, the North American system makes more sense, as the line losses for the consumption voltage power distances are magnitudes below those distances the consumption voltage power has to travel on European lines...

4118. CW phonetics

A German ham (DL1FAE) once told me, that there are CW phonetic phrases for each and every character of the Morse alphabet.

For instance, the phonetic phrase for the letter L in German is
Ich liebe Dich (I love you)
which when pronounced correctly, has the didadidit melody.

(1) I wonder if any DL/OE/HB-ham could supply me with the full list

(2) and wether or not something alike exists for the English language

Curious in W2-land

Whats the matter? You have nothing nice to say about me endeavors?

Perhaps you should look in the mirror before making such stupid
comments.

It wasn't my idea to have a flame war. however, since you seem so keen
on the point, why don't you check into the on-line archive of newsgroups
and see what mackey did to rec.radio.scanner for almost 8 months!

You might find that John Mackey is more of a problem than the rest of us
put together. If you get rid of him, all else falls into place.

ALso, I have been posting here (off and on) for 6 months now, and
nothing
I have done has caused any problems (until mackey showed up with his
assitude). When he is gone, I'll go back to reading postings and getting
questions answered.

>is more spectrum available on 6 meters than all the HF bands combined.

Actually it's 37.5%, my memory is going. There are I believe a total of 8
FCC amateur radio elements. 3 of them are code elements, and 5 are
written elements. To obtain the percentage of the "curriculum" that Morse
code represents, simply divide 3 elements by 8 elements, and multiply by
100%.

>> >The beauty of ham radio is that there is
>> >plenty of room for everyone with all varieties of skill sets.

>> Yes, room at the back of the bus (Cec) for those who are not native CWans.

>How is that the back of the bus? A tech has privs on almost all of the spectrum...
>clearly HF access is just a drop in the bucket in terms of spectrum access. If
>anything, HF ops are in the back of the bus.

Then you would of course be willing to trade seats? From the above, one
might conclude that we should open up the entire amateur spectrum below 30
MHz for Novice and above, but only Extra Class operators would be allowed
to use the spectrum above 420 MHz! Something is askew in this picture
Dave. Obviously the value in amateur radio communications does not simply
scale linearly with bandwidth.

Jim,
I'll refrain from saying what is showing when you make statements like
the one above.

Bill,
Certainly you're aware that the ultimate achievement in ham radio is
to key down on as many other stations as possible so as to be heard above
them all! You can hear the guys practicing this technique in Los Angeles
on 147.435 Saddle Peak. The strongest station captures the repeater.
Pretty much the same thing. In either case, it's an embarassing display
of behavior. Amazing the DX stations still want to point their beams our
way.

Sorry Don, I believe you are incorrect. The beeps were used by NASA long before CB'ers were attracted
to them. I used to use one on SSB all the time and might build another one to do it again!

If I'm not mistaken, RCI or UNIDEN have implemented the BEEP into their 10M rigs.

In fact, I might just put one in my 2M all mode for SSB work.

SB QST @ ARL $ARLB098
ARLB098 Vice Director Thernes, W4ZN, resigns

ZCZC AG78
QST de W1AW
ARRL Bulletin 98 ARLB098
From ARRL Headquarters
Newington CT December 19, 1996
To all radio amateurs

SB QST ARL ARLB098
ARLB098 Vice Director Thernes, W4ZN, resigns

Great Lakes Division Vice Director John Thernes, W4ZN, of Covington, Kentucky, has announced his resignation, effective December 17. In a letter to ARRL Secretary David Sumner, K1ZZ, Thernes, 48, said he was stepping down in order to attend graduate school.

''This is a decision that has been very difficult for me, but one I must make,'' Thernes said in his letter. He plans to pursue a full-time graduate program to obtain his MBA. Thernes said he'd like to set up an international consulting business eventually and believes the MBA and his skill in Japanese will turn out to be a successful combination.

''Amateur radio is a great public servant and a wonderful hobby,'' wrote Thernes in wishing his former Board colleagues Godspeed. ARRL President Rod Stafford, KB6ZV, will appoint a successor.

4132. DX-70T vs IC-706

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: "Victor D. Mete" <KE4QJK@worldnet.att.net>
Message-ID: <01bbedde$17db6f00$2c5592cf@AT&TWorldnet.worldnet.att.net>

Hello everyone,

My name is Vic and I am looking for some information. Being new to HF I know very little ... about the whole scene. Looking at rigs however, I have decided I'd like to buy either an Alinco DX-70T or an Icom IC-706.
Does anyone have an actual comparison of the two rigs side by side so as to comment on performance? How about features on HF & 6M between the two? I know the DX-70T comes with CW & SSB narrow filters built in and they are an option on the Icom, but how about actual performance between the two?
I have seen MANY mods for the IC-706 but NONE for the DX-70T. Are there mods available for the DX-70T?
I have heard the 706 sounds lousy on HF with a stock mic. A friend said he talked with a DX-70 owner and it sounded like the "big rigs"! Is this true?
How about this ... ya know the typical finger indent on the tuning knob? Well, the 706 has it and I've tried it. Very comfortable, works well. The DX-70 doesn't have it! How is it to tune??? I don't have anywhere to local to try one. In fact in SE Florida here, don't know of a single person with a DX-70. Don't see them for sale either!

Awaiting your comments (and tips to mods)!

Ah see...the call only shows your license class, not the fact you've
never made any CW contacts. And spelling misteaks?? goes with the
territory.

>
> > If you're nervous about your first contact, let
> > me know and I'll be happy to sked with you. I am sure that there are

> Advanced licensees), to remind him that he needs to encourage us, not
> avoid us.

Well, if that's the case, just ignore him/her/it. As you said, there
are plenty of others. Try this...go to the novice bands (although
someone has stated that they are not HF) and beep away there. Get your
confidence. learn to walk, then progress upward

Most of all, despite all thats posted here (and I do and get my share of
charbroiling..have fun..it;s a great HOBBY. something for everyone, even

>
> Incidentally, if you are going to nit pick, at least do it
> intelligently. Where does it say that we can't operate RTTY,
> for example, on 14.250?

Part 97 rules I think (S 97.305). It states that CW is allowed on ALL
frequencies then goes on to state these allowed emissions:

20 m 14.00-14.15 MHz RTTY, data
-do- 14.15-14.35 MHz Phone, image

So it appears that the FCC rules specifically prohibit RTTY operation
in the "phone" bands of HF. And it appears that Gary is right.

In the last few months I have used the ARRL services via the net. I get the W1AW bulletins, callsign, propogation updates & other news via e-mail & their pages.

Though, I find QST pretty dry, someone else may find it as their first exposure to ham radio.

I am, therefore, going to start a subscription of QST to my local library.

It only seems right.

4139. Re: MFJ259 antenna analyzer

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-19 00:00:00 UTC
From: Costas Spanos <spanos@eecs.berkeley.edu>
Message-ID: <32B9BBE6.41C67EA6@eecs.berkeley.edu>
Source record: 209704
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

The 259 is great, but I did find out one thing using it: Try to do so when the band is quiet. The 259 sends a small signal to the antenna and is looking for reflected power. This signal level is very small, and easily comparable with strong signals that your antenna might be receiving at the time. Since the front end of the 259 is not very selective, strong signals in nearby frequencies might also influence the measurements.

I found out the hard way that measuring the 10m resonance on my antenna is impossible when the CBers in my area are running serious power, for example. When that happens, the SWR appears much greater than it is.

regards

Costas

Checked on the ARRL FCC Data base, and foud my vanity call was issued to me yesterday.

I applied on 11-18-96,with the electronic form over the internet.
Exactlly one month ago. If you are waiting for your call to be issued, perhaps this is encouraging news.

My old call was AA9IS. My new call is W9FL. A nice one by two.
Why did I choose W9FL?
I decided to apply for a vanity call a little late in the game. I wanted a 1x2 with a "W" prefix. The letters "FL" are what Harley-Davidson uses to designate their family of touring bikes, of which I own the FLHTC.

I submitted 25 choices, of which W9FL was number one. My initials "T.B." were not available in the W 1x2 format. I spent quite a few agonizing hours trying to decide what callsigns to include in my 25 choices.

Any stories on why you choose your call?

Something you might try is to get with someone local (if you've got a
club or
something...) that you can talk to maybe
on VHF at the same time... and just practice on the air... maybe when
the HF
band is closed down so that you don't have too much interference. I was
remembering my wife's first CW qso with one of the guys in the club (I
heard
him calling CQ rather hesitently on 10M, and suggested my wife answer
him)... they
fumbled around on CW for a while, and then got onto the local repeater
("PSE QSY to 145.43") and talked/laughed about the whole thing...
I think it was his first CW also. Also, do a lot of listening... it
helps
to learn the current jargon and shortcuts being used.

Cheers, and have fun. If you can build up some CW skill by field day, you can really have some fun there.

Get a life Doug! You weren't allowed to compete in the Miss America
Pagent either.
The "it's tooooooooo haaard' doesn't work either, We don't need any of
90's welfare attitude here...I can't do it so I should be given it
anyway....
It's a shame that you can't learn the code or are unwilling to make the
effort, in the second case no one can help but you, in the first,
well there are classes, on the air practices and doctors. depends on
what
the disability is...

Well, John, you can sure read a lot more into my post than I wrote.

First of all, where did I say a person couldn't post??

Second, I tried the QRZ database, there are no 'Joe Hansen's.

Third, all e-mail to "joe" comes back undeliverable.

Fourth, Anyone can get an email address from usa.net or any other
servers & have it forwarded to them.

Fifth, you last name was not in my post. Why would you think I was
talking to you?

> I Want To Belive...

Hi Dave,

Certainly is possible, and maybe even has been done (but I
don't know for sure.)

Here in the middle of the country we have something called the
"superlink" which links repeaters across several states (4 or 5
last time I looked). The link is "on call" in the sense that each
repeater normally only repeats it's own input, but the link to a
distant repeater can be established by entering a 3-digit
DTMF code which then activates the link to that distant
repeater (and any in the chain between.)

We have occasionally linked this network into other networks
and I recall one session where we had hams in Ohio talking to
hams on a Boeing sponsored repeater in the Seattle-Tacoma
area, all via UHF/VHF links.

I've never worked a hurricane on 14.325 before, so maybe it does get
scared and go away. Maybe if enough hams get on 14.325 during a hurricane
(typhoon to you guys in the Pacific Rim) somehow all the electromagnetic
radiation somehow polarizes the Earth's magnetic field and causes the
weather to change hence causing the hurricane (typhoon) to veer away.

Funny I didn't read anything in QST about this. Maybe QEX has an
interesting article.

In so far as the Canadian regulations are concerned, there are no sub-band allocations - the only restrictions are emitted bandwidths. However, the Radio Amateurs of Canada have published recommended band plans; but, they do not have the force of law.

Dear friends,

My AEA DSP 2232 doesn't work right.
I'm getting on the LCD of the TNC the following,
Packet
Packet
and both lights DCD and CMD are on.

On the screen of the computer appears the following message when i communicate with the TNC,

cmd: 3d: DSP failed load software and sometimes cmd: 2d: DSP failed load software.

I dont know if the Microchip Motorola 56001zl20 is doing wrong or some statics on it or other.
How can I solve this problem..
AEA they say is in processof closing, so they can not help me.
Please some one do it.
Awaiting your kind comments, have my best.

Thomas Edison originally developed and marketed direct current for
distribution in thickly settled areas because it was more reliable than
any of the then existing AC systems. For safety and to reduce neutral
currents, it was distributed as a 3 wire +, -, and grounded neutral
system. Because of the higher efficiency and lower cost of an AC system,
it became desireable to develop one that would compare in reliability to
the DC system. It was thru the efforts of Dr's Tesla and Steinmetz and
Westinghouse that the AC network that we have today resulted.
The macro network is a 3 phase, four wire, grounded neutral system with
power typically generated at 13,200 volts, transformed up for
transmission and down for local distribution. Where the end consumer
application does not include large polyphase induction motor
requirements, single phase transmission with system balance maintained
at the substation is a distinct economy. The U.S. grounded
neutral/center tapped secondary approach has been maintained for economy
and safety, and is in-fact a carry-over from Edison's original marketing
plan for electrical energy.

which, unfortunately, detuned the AM towers they're on---

As a point of interest, whether it exists or not, we seldom see damage at either AM or FM radio stations from direct strikes to towers. The damage is usually caused by strikes in proximity to the power lines feeding the station which induce spikes into the power line. Where this has been a problem we can ususally eliminate problems entirely by using an isolation transformer that has a good faraday shield between the windings.

One more piece of information for which interest may not exist: Putting a nice big hunk of ferrite around the feedline won't prevent the strike from eating your equipment. If you look at the energy distribution you find a big blob of energy at 5KHz that'll get around lightening loops, lightening chokes, etc, etc. You have to short it to ground--or, as in networks built by those who know, you put a series pass capacitor in the feedline center conductor path to keep that nasty return current off your center conductor.

A "coordinated" system that *isolates* the equipment from lightning
damage all across the frequency spectrum must be the right approach. No
one single "fix" is enough. The things that work at low frequency are no
good at the higher frequencies, and vice versa.

SB QST ARL ARLB100
ARLB100 WRC99 Committee Supports HF CW Requirement

The special committee created by the ARRL to study issues relating to the 1999 World Radiocommunication Conference (WRC-99) has recommended that the ARRL Board of Directors not support changing the treaty requirement for Morse code testing to operate below 30 MHz. The committee submitted its final report to the ARRL Board this week.

The committee report contains recommended ARRL positions regarding possible changes in Article S25 of the international radio regulations. Consistent with the results of a survey of ARRL members, the committee recommended no change in the existing treaty obligation that administrations test prospective amateur licensees on their Morse code ability before authorizing them to operate below 30 MHz. The committee did support changes to Article S25 that would:

Eliminate the so-called ''banned countries'' list

Establish that providing communications in the event of natural disasters is a normal and desirable part of the international service provided by radio amateurs

Reduce restrictions on international communications on behalf of third parties

Aid in the establishment of an ''International Amateur Permit.''

The committee report also responded to the Board's request that it study possible changes to the amateur licensing structure in the United States. The committee offered some proposals for change, but recommended that the Board take no action on this part of its report until the committee's proposals are shared with the membership and there is an opportunity for member comment.

The Board will consider the committee's report and recommendations at its next regular meeting, January 17-18, 1997. If the Board accepts the report, it will be available for public release. An article giving the results of the survey will appear in February 1997 QST.

Yea, like Dejanews which everyone can access. Besides, I also kept my own
archive of postings on that NG, would you like me to dredge up a bunch
of the postings where you were running your mouth trying to defend Bill
while several the people there were taking him to task for his behavior?

> I still say that you are in denial. so, I'll point out a few "facts" for
> you:

No I am not in denial, absolutely not, there is no way I could be in
denial. That simply is not possible. Infact, I deny that!

But, here are a few facts for you:

A. The problems on rec.radio.scanner disappeared when Bill did.
B. You used condescending remarks towards others and tried to
appear as some sort of authority or knowledgable contact.
C. You made immature, shallow, & attacking types of entries
D. Your recall of facts is distorted where they are not in your
favor.
E. Numberous people stated their dislike for your (& a few others)
spammish type of entries.

If these are not adequite for you please let me know as there is
an abundunance of the type of facts as listed above.

> You failed to mention that you disobeyed directives from the moderator

The committee report also responded to the Board's request that it study possible changes to the amateur licensing structure in the United States. The committee offered some proposals for change, but recommended that the Board take no action on this part of its report

until the committee's proposals are shared with the membership and there is an opportunity for member comment.

The Board will consider the committee's report and recommendations at its next regular meeting, January 17-18, 1997. If the Board accepts the report, it will be available for public release. An article giving the results of the survey will appear in February 1997 QST.

>Why dig a hole 6.5 ft. deep? Unless the tower is really tall and self
>supporting, you would be better with a hole about 3'x3'x3'. Suggest you
>try to get hold of a copy of the Rohn or Heights tower manual. They
>give suggestions on how to design and make tower bases.
>
>If the tower is guyed, you can get by with a much smaller base.

The size of the base needed depends very much on local soil mechanics.
The tower base serves two purposes. It bears the weight of the tower,
and any loading that guys may impose. And it serves to resist the
overturning moment of the tower. Different soils can support different
ground pressures, and different soils have different resistances to
shear. There is no "one size fits all" for this sort of thing, but
in general deeper is better than wider.

Now my tower has almost a full section buried. In other words the
hole is 10 feet deep and has 2 feet of aggregate in the bottom. I
dug it by hand with a posthole digger. Not with an auger, with a
real posthole digger. I started the hole with the regular handles,
and changed to longer handles as the hole got deeper. It took two
leisurely mornings to finish (too hot to dig in the afternoon).

For a 6.5 foot hole, the standard handles will suffice. You just
have to get down and reach into the hole a bit to work them when
you get down near the bottom, the standard handles are about 5.5
feet long. It will help if you replace one of the wooden handles
with 1 inch galvanized water pipe, however, because the extra weight
makes the posthole digger dig better. Even in the hardpan clay here,
I can just drop the digger in the hole to get a bite, close the blades
with the handles, and lift out the dirt. That's a lot easier than

having to muscle the blades into the ground.

If you've never seen a real posthole digger, it is like two tile spades facing each other, joined with a pivot near the bottom. You drop it in the hole, spread the handles, which brings the spades together trapping dirt between them, and lift it out of the hole. Repeat as necessary until you are done.

Exactly! But with a limited budget, one must prioritize. And the
power line is the starting point after one finishes the grounding.

ARLP053 Propagation de KT7H

Solar activity is up again with the return of region 7999. Average flux was up this week by 13 points, the sunspot numbers up over 17 points, and A index up 1 point.

Flux is expected to rise up to around 96 on December 23, then drop below 80 on December 31, then up to the mid-eighties again around January 5 and 6. Expect the A and K indices to be up again around January 6, 11 and 12.

Sometimes there are questions about the effect of a solar or lunar eclipse on propagation. I'll include here some notes from Dave Palmer which present some interesting thoughts about eclipses:

''Solar and Lunar eclipses do not represent anything special in terms of planetary positions. They're really just a matter of perspective.

Solar eclipses occur only at the New Moon, when the Moon is between the Earth and Sun. Lunar eclipses happen only at Full Moon, when the Earth is between the Moon and Sun.

But Full/New Moon happens about every 28 days. The reason we don't get eclipses (on Earth, at least) twice a month is that the Moon's ''orbit about the Earth'' is tilted, and the coincidence of an exact line-up of the Sun-Moon-Earth (as seen from some spot on Earth) happens only a couple times per year.

However, every New Moon, there IS a solar eclipse out in space either north or south of the Earth, and every Full Moon, there's a Lunar eclipse north or south of the Moon (OK, really, there's a solar eclipse SOMEWHERE in space for as long as the Moon is not obscured by the Earth, and a Lunar eclipse for as long as the Moon is totally obscured by the Earth). The point is that the eclipse's

shadow usually just misses hitting the Earth (or the Moon)''.

Sunspot Numbers for December 12 through 18 were 32, 31, 30, 25, 27, 38 and 33, with a mean of 30.9. 10.7 cm flux was 81.1, 81.7, 82.5, 85, 86.2, 86.4 and 88.4, with a mean of 84.5. Planetary A indices for the same period were 8, 6, 5, 10, 10, 8, and 5, with a mean of 7.4.

In this week's VK2WI news bulletin:

Divisional News - VK2WI transmission schedule for the holidays;
WICEN News
Space News - Mir cosmonauts spacewalk to repair damaged Amateur antenna; and AMSAT Phase 3D launch delayed
Heard Island Dxpedition update (incl frequency lists)
Club News
Broadcast Roster

DIVISIONAL NEWS

There will be no broadcast next Sunday, as even the VK2WI broadcast team deserves a holiday once a year! Normal broadcasts will resume the following Sunday, 5th January 1997.

The Divisional Office is now closed until 13th January 1997, so news items for broadcast on the 5th and 12th of January cannot be accepted by post or fax. However, news item can still sent via Packet to BCAST@VK2WI or by Internet email to wiansw@sydney.dialix.oz.au. The usual deadline of 2pm on the Friday preceding the broadcast still applies.

WICEN NEWS

As this is the last broadcast for the year, the Management Committee would like to take the opportunity to wish all personnel a safe and prosperous New Year.

This is usually a quiet time for WICEN, however, the "silly season" can bring forth sudden activations such as storms and bushfires, so please keep your equipment ready.

Next year sees the VRA Mid Year Conference, at Wombeyan Caves, on the weekend of 22nd-23rd March; the Bridge to Bridge Speedboat Classic on 4th May; the Hawkesbury Emergency Expo, run by Alan VK2YYJ, is over 16th-18th May; the Hawkesbury Classic Paddle is organised as usual by Kevin VK2CKD over 18th-19th October and the annual Bungonia Cave Rescue will tentatively be on the weekend following, over 25th-26th October.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6900, and Central

Coast each Thursday at 8.30pm on the Wyong repeater 7125. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". It is generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics, and contains pointers to many emergency-related pages likely to be of interest.

-- Dave Horsfall VK2KFU, WICEN (NSW) Inc. Publicity Officer

HEARD ISLAND ANTARCTIC DXPEDITION UPDATE

Everything is on schedule for the January 3rd departure from Reunion Island. Members of the Heard Island team will begin arriving on Reunion as early as December 26th. Operation from Reunion (TO0R) will begin around December 30th for several days, emphasising the low bands. All necessary shelters, cooking equipment, survival equipment, antennas, and of course, radio equipment has arrived on Reunion, apparently in good shape. The team consists of EA8AFJ, HB9AFI, HB9AHL, K0IR, K4UEE, K9AJ, KK6EK, N6EK, N6MZ, NP4IW, OE9AMJ, ON5NT, ON6TT, PA3DUU, RA3AUU, VK2JDM (ex VK2TQM), W8FMG, W0GJ, WA3YVN, and V1YC. This may be the most experienced DXpedition ever assembled and they are chomping at the bit to get underway. Here is the itinerary:

Jan 3 Depart Reunion Island (TO0R)
Jan 8/9 Visit Crozet Island (TX0C)
Jan 12/13 Arrive Heard Island
Jan 15 On the air - Heard Island (VK0IR)
Jan 29/30 Depart Heard Island
Feb 1 Visit Kerguelen Island (TX0K)
Feb 7 Arrive Reunion Island

The operating frequencies will be:
CW SSB RTTY
160M: 1.826.5 N/A
80M: 3.507/3.522 3.799
40M: 7.007 7.065 7.030
30M: 10.104 10.140
20M: 14.024 14.195 14.085
17M: 18.074 18.145 18.105
15M: 21.024 21.295 21.085
12M: 24.894 24.945
10M: 28.024 28.475

Note these are our transmit frequencies, the operator will advise what the working split will be.

During the DXpedition, updated and current information will be available through a variety of sources:

(1) The Heard Island Web Page will be updated frequently with progress reports, news, statistics, weather, and photos (we hope).

http://www.ccnet.com~cordell/HI
or via
http:///www.gec.com.au/hi.html
or via the WIA web page.

(2) A Heard Island internet email Reflector will be operational. This reflector will be the preferred method of communicating with the DXpedition pilots. The pilots will in turn communicate with the Island team via PACSAT.

The objective is to establish a reliable communications link from the expedition team to the DX community and vice versa to allow for suggestions, comments, feedback, and other vital information. The pilot stations are: ON4UN (chief pilot), N1DG (WB2DND), K0EU, W0EK (WD0AEK), W2FJ/6 (WA2FIJ/6), W4WW (N4PYD), and JH1ROJ.

To subscribe to the email reflector send an email to
heard-request@ve7tcp.ampr.org
with "subscribe" in the body of the email.

(3) Heard Island Information Net - 75m SSB daily on 3.777 at 1400Z starting the 1st of January and closing on the 1st of February.

There is a possibility of radio operations from Crozet and Kerguelen. However according to our sources, the length of stay on these islands is quite short and dependent on boat schedules and weather. Additionally, we are told there is no place to stay the night and no masts to support antennas. We do have visas, radio licenses, and permission to go ashore and a huge desire to come on the air, if at all possible. They rate the possibilities now at 50/50. While enroute aboard the Marion Dufresne, they will be quite active as TO0R/MM (Maritime Mobile)
Upon arrival on Heard Island, the NCDXF beacon will be installed.

VK0IR/B will be transmitting on 14.100, 18.110, 21.150, 24.30, and 28.00. The beacon will transmit for ten seconds on each band, every three minutes. Feedback (via the pilots) as to frequencies, times of peak propagation, signal strength, Long Path verses Short Path are very important. Because the beacon will be operational 2 or 3 days prior to radio operations beginning, your reports will be helpful in setting the operating plan for the first days of operation. Also, a special 160m beacon will be operational on 1826.5.

The Heard team is very grateful for the donations received thus far from the DX community. Additional contributions are still needed for this very expensive project and should be sent via the following address:

Heard Island Expedition
C/- David Muller
Locked Bag 29
POST OFFICE RYDALMERE NSW 2116

Again thanks to all those who have assisted or supported this activity.
Happy Christmas to all.

--David VK2JDM Expedition Member

SPACE NEWS
MIR ANTENNA BROKEN

A special space walk to repair a broken Amateur Radio antenna on the Russian Mir Space Station may herald a new era in international ham radio cooperation.

Here's the message, as received:

To ::ALL
>From ::R0MIR
We finished our second space walk. After the first one we had a problem with our antenna. Tonight we repaired it and now it's Ok. We back your pardon for such an occasion.
73 de Mir crew"

Mir is back on 2 meters, and it's a remarkable example of the importance of amateur radio in the Russian Space Program. They conducted a space walk to repair the ham radio antenna. The Russians consider their amateur station as an essential element of communication aboard the MIR.

This is a prelude to what we can expect in the next few years. Manned space flight programs today fly on American Space Shuttles and Russia's MIR Space Station, but they will come together in the International Space Station that will be assembled in orbit in the next few years. That station will provide a permanent presence in orbit for at least 8 participating nations and amateur radio representatives from those nations have formed ARISS, an acronym for Amateur Radio International Space Station, to build and operate a super ISS ham station.

There are several organizations. SAREX, the Shuttle Amateur Radio Experiment, handles the Space Shuttle Missions. MAREX, the Mir Amateur Radio Experiment, is in charge of MIR amateur radio operations. Germany's SAFEX, provides MAREX equipment and technical assistance. And, here in the United States, MIREX, or Mir International Radio EXperiment, has been formed and accepted by the Russians, the Germans and SAREX as a point of contact for MIR school contacts and experiments. The member organizations are preparing a release that will cover all of this in greater detail.

A major dedication of manned space flight by all nations is contacts with students in schools. Now that Mir is back on the air, the way is open for such contacts. John Blaha, a U.S. Astronaut, is with the two cosmonauts in space and recently was granted permission by the FCC to conduct third party traffic, meaning he can talk to students or friends through U.S. licensed and controlled stations.

Miles Mann, WF1F, speaking for Mirex, has said that "Applications for U.S. school MIR QSOs are approved by MIREX and SAREX before going to MAREX and SAFEX. The Mir crews have busy work schedules but our guidelines allow us to arrange, months in advance, school QSOs during

crew off hours. The cosmonaut amateur radio department gives final approval for all QSOs and reserves the right to cancel at any time.

SAREX works with the International Space Station Office to clear schedules for John Blaha.

The good news, that Mir is now back on the air, means that some school contacts can be made. In the near future, SAREX and Mirex hope to schedule 4 to 6 Mir school contacts a month.

--Amateur Radio Newsline, 13 December

PHASE 3D DELAYED

The European Space Agency has announced a launch delay for Ariane 502, the rocket that is supposed to carry Phase 3D. AMSAT-NA Executive Vice President Keith Baker, KB1SF, reports that the launch has been pushed back to ''early July,'' but said a specific launch date was not yet available. ESA said the change resulted from the recent establishment of a ''detailed timetable'' that's required to permit launch.

A brief ESA news release said: ''As each individual operation will require very close analysis, the 502 campaign is scheduled to begin on Wednesday 9 April 1997, the launch itself being planned for early July.'' ''We'll be ready,'' said Baker, adding that the new schedule will give AMSAT ''a little more time to make things right.'' The Phase 3D satellite itself is under assembly in Orlando, Florida. Baker said there's still a lot of work to be done, but the project was on schedule for an April launch. The new launch schedule means that the Phase 3D satellite will not be operational until September or October.

''Obviously we would like to have the satellite in orbit a lot sooner,'' said Baker. ''But we don't want anything to be launched if it's not ready.''

--ARRL Space Bulletin 017 December 19, 1996

CLUB NEWS

FROM THE FISHERS GHOST AMATEUR RADIO CLUB Inc.

Well we are coming to the close of another year..
It's been a long one with many things happening within the Fishers Ghost Club..

There have been some additions to the Clubs shack with the HF station up and running now, and being used quite extensively on various evenings with some of the students getting to learn some of the practical points of radio operation..

The Sunday net on 28.520 mhz and the Priclay Net on 3.580 mhz both commencing at 8.00 local are still holding up their end with a great effort being put in by all operating the net and those joining in.. The quizz on the Sunday evening not really Is a lot of fun.. Join in ... you'll will like it..

Presently the Club (as most of the clubs Packet users already know) has a PMS on 147.550..The PMS was set up for the members to have a contact point for message distribution and being able to keep members informed with info relating to the, club and it's members.. It also contains some files of interest that may be downloaded or if you wish files may be also left on the system that may be of interest to others..

As club members we all know....February is the time of the AGM.. it was decided at the last Comittee meeting that -NO- Subs will be collected on the Evening of the AGM prior to the new committee taking office as it creates a great deal of congestion on the evening prior to the start of the proceedings..If you do wish to pay subsciptions on the evening..please be aware It will only he done AFTER the close of election..

There may even be a position or two available so you might want to have a think about taking a seat on the Committee or the Sub Committee.. It could be your chance to help in advancing the Club one step further..
** REMEMBER this is your club and we only get out what the members put in..All ideas are welcome..Glad to see so many members back again already as I am presently putting the Database together, and hope we can make it even better in '97' with everyone fooling part of this Great Club..

Classes held each Wednesday Evenings commencing at 7:00pm and General meetings are held on the third tuesday of each month commencing at 7:30pm.. These are both held at the Campbelltown Highschool on the Chamberlain road end of the school ...

The very best for the Christmas Season from all of us at Fishers Ghost A.R.C.

--Jim VK2LJZ Club Secretary..

VHF DX GROUP

THE VHF DX GROUP IS AN INFORMAL ASSOCIATION OF ACTIVE VHF AND UHF OPERATORS. THE GROUP WAS FORMED TO PROMOTE NON-REPEATER ACTIVITY AND TO HELP JUSTIFY OUR GENEROUS ALLOCATIONS IN THE VHF SPECTRUM AND ABOVE.

THE FIRST MEETING OF THE VHF GROUP FOR 1997 WILL BE ON TUESDAY JANUARY 21 AT AMATEUR RADO HOUSE, PARRAMATTA. AT THIS MEETING WE WILL BE DECIDING ON OUR ACTIVITY PROGRAM FOR 1997, SO IF: YOU HAVE A TOPIC WHICH YOU THINK SHOULD BE COVERED, THEN COME ALONG AND HAVE YOUR SAY. WE WILL ALSO BE PLANNING OUR CONTRIBUTION TO THE WYONG FIELD DAY IN FEBRUARY.

THE TUESDAY ACTlVlTY NIGHTS ON 144 MHZ AND THE GROUP'S SUNDAY MORNING NET ON 146.550MHZ FM WILL CONTINUE AS NORMAL OVER THE HOLIDAY PERIOD.

--SUBMITTED ON BEHALF OF RICHARD SOULIE, VK2ARS

GLADESVILLE NEWS.

The Gladesville Amateur Radio Club Incorporated would like to wish all listeners the Compliments of the Season and all the best for the New Year.

TELEVISION GLADESVILLE maintains its normal transmission schedule over the holiday period - being Wednesday from 7.30 pm Friday and Sunday from 7 pm. Why not check out VK2RTV on Channel 35 -- the main transmitter has been returned to service. having about five times the output of the standby unit that was in use for a few weeks.

A story about Gladesville's Television. written by Jack VK2GJJH is in the current issue of Radio Communications.

If you wish to contact the Gladesville Amateur Radio Club. call via the club telephone on (02) 9427 0530 (repeat).

Again all the best for the forth coming holiday period and if you have some spare time check out Channel 35 or one of the relay stations which carry the test Transmission. See you in 1997.

-- Keith VK2ZZO President / TV Co-ordinator.

AUSTRALIAN AMATEUR PACKET RADIO ASSOCIATION

AAPRA RECOGNISES THAT IT IS CHRISTMAS TIME AND SENDS SEASONS GREETINGS TO ALL IT'S MEMBERS AND EVERYONE ELSE. OUR MEMBERS SHOULD HAVE THE LATEST COPY OF DIGIPEAT DELIVERED BEFORE XMAS DAY.

THE EDITOR OF DIGIPEAT ALWAYS WELCOMES CONTRIBUTIONS FOR THE NEWSLETTER. IF YOU HAVE ANY BRIGHT IDEAS OR ACHIEVMENTS RELATING TO PACKET RADIO SHARE THEM WITH ALL OUR OTHER MEMBERS. AAPRA'S ADDRESS IS LISTED WITH THE CALL SIGN VK2IN.

-- GEOFF VK2BQ PUBLICITY OFFICER.

RADIO VETERANS GROUP

The first meeting of the Radio Veterans Group for 1997 will be held, Deo Volente, on Thursday 20 February 1997, 11.00 am to 2.00 pm , at Amateur Radio House, 109 Wigram Street, Parramatta.

-- Franklyn Pain (VK2DYP) Convenor, Radio Veterans Group

SUMMERLAND AMATEUR RADIO CLUB.

ALL MEMBERS AND INTERESTED PERSONS ARE ADVISED THAT THE ANNUAL GENERAL MEETING OF OUR CLUB IS SET DOWN FOR SUNDAY 9TH.. FEBRUARY 1997 ... 2PM, AT THE CLUBROOMS, RICHMOND HILL. ANNUAL REPORTS AND ELECTION OF OFFICERS WILL BE THE ORDER OF THE DAY.

NOW IS YOUR CHANCE TO HAVE A VOICE IN THE ORGANISATION OF OUR CLUB. .. SOME OF THE OFFICIALS HAVE INDICATED THAT THEY WILL NOT BE AVAILABLE THIS YEAR... SO GET YOUR

NOMINATIONS READY. REMEMBER .."YOU GET THE GOVERNMENT
THAT YOU DESERVE"

REFRESHMENTS WILL BE AVAILABLE AFTER THE MEETING.
ANNUAL MEMBERSHIP FEES ARE DUE ON FIRST JANUARY.

--VK2GJ.. GRAEME... PUBLICITY OFFICER.

COMING EVENTS (22 DEC 96)

If you would like to submit a news item for inclusion in the weekly
broadcast, please send it to us by one of the following means:

by post to the Divisional Office, PO Box 1066, Parramatta NSW 2124;
by fax to (02) 9633-1525;
by packet radio to BCAST@VK2WI.NSW.AUS.OC, or
by Internet e-mail to wiansw@sydney.dialix.oz.au

Please note that the deadline for news items is 2pm on the Friday
preceding the broadcast; if submitting news items by packet or internet,
please allow for forwarding delays in the network.

If submitting printed copy, please:
submit your news item on A4-size paper;
double space your text;
write on one side of the paper only, and
use a plain font such as "Arial" or "Helvetica", 12-point or larger. This is
especially important if sending your news item by fax.

Please avoid using abbreviations and shorthand, check your spelling, grammar, and punctuation, and use the exact words you wish the announcer to say on-air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

SB QST ARL ARLB100
ARLB100 WRC99 Committee Supports HF CW Requirement

The special committee created by the ARRL to study issues relating to the 1999 World Radiocommunication Conference (WRC-99) has recommended that the ARRL Board of Directors not support changing the treaty requirement for Morse code testing to operate below 30 MHz. The committee submitted its final report to the ARRL Board this week.

The committee report contains recommended ARRL positions regarding possible changes in Article S25 of the international radio regulations. Consistent with the results of a survey of ARRL members, the committee recommended no change in the existing treaty obligation that administrations test prospective amateur licensees on their Morse code ability before authorizing them to operate below 30 MHz. The committee did support changes to Article S25 that would:

Eliminate the so-called ''banned countries'' list

Establish that providing communications in the event of natural disasters is a normal and desirable part of the international service provided by radio amateurs

Reduce restrictions on international communications on behalf of third parties

Aid in the establishment of an ''International Amateur Permit.''

The committee report also responded to the Board's request that it study possible changes to the amateur licensing structure in the United States. The committee offered some proposals for change, but recommended that the Board take no action on this part of its report until the committee's proposals are shared with the membership and there is an opportunity for member comment.

The Board will consider the committee's report and recommendations at its next regular meeting, January 17-18, 1997. If the Board accepts the report, it will be available for public release. An article giving the results of the survey will appear in February 1997 QST.

USE OF NICAD BATTERIES - Cell Grading

[Adapted from "Cell grading improves communications batteries,"
Mobile Radio Technology (an Intertec Publication), June 1987.]

Nickel-cadmium battery packs have become a popular choice as a power
source for portable communications equipment. Advances in construction
methods have made the packaging smaller with more energy-storage
capability.

One efficient technique for producing a longer-lasting battery lies
not in the construction, but in "cell grading," a measure of the
staying power or capacity of each cell for the battery pack is
assembled. Grading ensures that cells are used in the most efficient
```

manner possible, making packs last longer. Through grading, cells with similar capacity that may be needed for different types of applications are grouped together.

Voltage criterion

A battery pack consists of two or more cells. The most common configuration for communications equipment is a series connection of 6-12 cells, providing 7.2-14.4Vdc. Because nicad cells produce approximately 1.2Vdc each, rated voltage is the number of cells multiplied by 1.2V. In reality the voltage rises above 1.2 during and after charging. The voltage falls below 1.2V during discharge, but is not considered depleted until it drops to 1V.

An observation of voltage alone cannot indicate a cell's integrity accurately if the cell's voltage is less than 1.2V after charging. This indicates internal damage to the cells. Because the pack voltage cannot be used as a gauge of capacity, each cell must be cycled, which is the reasoning behind cell grading.

Battery capacity, in milliamp-hours (mAh), quantifies the amount of energy the battery can deliver over a specific period. Usually the period is one hour. A battery rated at a 12V, 750mAh should, when fully charged, maintain a 0.75A discharge rate for one hour. The unit is considered depleted when its terminal voltage under load reaches 1V/cell (10V in a 10-cell battery).

Over a period of several years, it has been found that some cells can vary as much as 20% above the cell rated capacity. For example, within a group of 450mAh rated cells, a few actually run close to 540mAh. Cells with 12% to 17% (504-530mAh) over rated capacity are common and 30-40% of the 450mAh cells run 500mAh or more.

Pack quality

Without cell grading, random groups of cells would typically be assembled into a battery pack. Each group would probably have at least one cell in the 450mAh range and perhaps one or more in the 500mAh range. A battery has only as much capacity as its weakest cell. Therefore, the entire pack, even with several high capacity cells, can only perform at the 450mAh level.

For the same of comparison, a pack that contains 500mAh cells offers a

(Continued to next message)

(Continued from previous message)

10% increase in use time over one that contains all 450mAh cells.
However, both are physically the same size.

Causes for variation

A number of changes have taken place in the manner in which nicad batteries are constructed since the technology began in the 1920s. Pocket-plate construction was used to make reasonable quantities of small, sealed nicad packs. Although they had high rates of discharge, they did not have any overcharge protection and only could be charged slowly.

Technological improvements resulted in the sintered plate construction, which gave thinner electrodes with large, active surface areas. This method allows high charging and discharging rates and gives the batteries better low temperature and overcharging properties. The size of the holes or the porous construction of the electrode determines the amount of active material the electrode can absorb.

Electrode porosity varies, which in turn causes cell capacity to vary. The effort to produce high-quality, consistent electrodes is never ending. Capacity is determined by separator material, the amount of electrolyte (KOH), the density of the KOH and the space between positive and negative electrodes. All of these elements have their own little problems. The interaction of all the factors in individual cells make the process of cell grading more valuable.

The grading process

Nicad cell grading is carried out with a computer-monitored system. The system slowly charges the cells for 24 hours, ensuring a full charge for the test. The cells are then placed into a fixture that is electrically connected to a precise load. The computer monitors the voltage of each cell and calculates its capacity as it discharges. When all cells under test are depleted, the computer provides status data on each cell.

Grading is a quality control tool for the manufacturer because it allows defective and low-capacity cells that do not reach specifications to be pulled from the assembly process. Not only does it allow grouping by cell capacity, it avoids the expense of having to rework a final assembled battery that does not operate properly.

No cell forming

When a battery pack is constructed of unknown or mixed charged states, a process called cell forming is necessary to bring the cells all to the same state of charge. To form a battery, a slower trickle charge (C/10+) is used. As an extreme example, a battery could have one cell fully charged and 11 cells not charged at all. If this battery is slow-charged the first time, the low cells simply catch up to the full one with no damage. However, if the pack is put into a rapid charger, the lone full cell will be severely overcharged, while the others are charging. The entire assembly can be damaged in the process.

By using a grading process prior to assembly, the mixed bag of individual cells is avoided and cell forming is not required.

Battery care

In the assembly process, graded cells are welded into packs. The battery pack maintains its rated capacity only if properly cared for. Battery analyzers can be used to achieve the maximum performance and cycle life from a battery.

When the battery is inserted, the analyzer begins a complete, current-regulated rapid charge. During the charge period, a microprocessor-controlled system makes multiple readings of the actual battery voltage. Each reading is compared with the following reading to determine when the battery has reached 100% of its rated capacity.

Next the analyzer switches to a controlled discharge cycle, taking the unit to a 1V/cell potential. At this point, the analyzer can calculate the battery capacity in mAh and provide a printed documentation of the information.

Finally, the analyzer begins another charge cycle, returning the battery to a 100% charge.

Because nicad batteries of today are constructed to last longer then ever before, consideration must be given to ways to maintain their specifications throughout the rated lifetime. Cell grading and sorting of cells prior to assembly into packs plays a role in providing a battery that will have a good long life. At the same time it allows the construction of battery packs with higher capacity in the same packaging volume.

Getting Charged Up Right

(Continued to next message)

4181. RE: Zapping old NiCad batteries

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-20 00:00:00 UTC
From: clint.bradford@atdbbs.com
Message-ID: <9612201616068003@atdbbs.com>
Source record: 209496

(Continued from previous message)

Three methods are common in determining when a battery has reached
a state of full charge. One involves using the battery specifications
and applying a controlled charge; the other two involve measurements.

The controlled-charge method applies a constant current to a battery
that has been discharged to 1V/cell. The current is applied for a
specified period that satisfies the battery's specification.

Measurement methods monitor the battery voltage during charging to
detect a negative slope. As a battery reaches full charge, its
terminal voltage first slightly increases, then decreases. The
transition from the higher to lower voltage is known as the negative
slope and indicates a full charge.

Both methods are acceptable. But when the negative slope method is
used, a discharge cycle should still be included prior to charging.

Another method measures battery temperature. A thermal detection
device placed against the cells reveals an increase in temperature.
A nicad battery's temperature rises only after it reaches full charge.
Therefore, to some extent, the battery is overcharged with each charge
cycle. The thermal method may be acceptable if it is engineered
properly, but it is not the preferred technique.

Positive contacts

The charger terminals must make positive contact with the battery
terminals to ensure a low resistance connection for an efficient
discharge-charge cycle.

Positive contact also is a safety consideration with chargers that
use thermal sensing of the full charge. If proper contact is not
made, the battery could overcharge. A rapid-charge battery subjected
to an overcharge could reach temperatures high enough to melt the
battery case.

(Continued from previous message)

Selecting the charger with the right combination of capabilities helps to get the maximum use from an inventory of nickel-cadmium batteries.

How can you be sure nickel-cadmium [nicad] batteries deliver their rated performance, time after time? The secret is in proper charging.

Many battery chargers are available, but each is not as effective as another in charging and maximizing battery life. Several factors should for the basis for selecting a particular mode.

QUESTIONS
---
1. Can the charger detect a level of discharge ? Can the charger system discharge a partially charged battery to 1V/cell potential before starting the charge cycle?

2. Is a proper current level used in charging the battery?

3. Is a trickle current applied to the battery after the charge cycle is complete?

4. Is the technique to determine when a full charge has been obtained effective and safe?

5. Is positive contact maintained between battery and charger terminals?

Discharge cycles

Discharging a battery before applying a charging current cures the battery of at least three potential problems, including long-term storage, long-term over-charging and memory effects.

A battery subjected to shallow discharges followed by full charges is likely to exhibit a phenomenon known as memory effect. Memory is not a loss of capacity, it is a voltage depression. Each cell in the battery rapidly loses voltage during subsequent use, suffering a reduction from 1.2V/cell to about 1V/cell. The reduced voltage mimics the appearance of a loss of capacity. The memory effort is avoided when the battery is fully discharged before each charge cycle.

Long-term over-charging causes the loss of 30-40% of the battery's rated capacity the first time it is used after being subjected to the over-charging. One discharge-charge cycle can restore the abused battery to 75-90% of its rated capacity for its next use.

Long-term storage causes the battery electrolyte to become unevenly distributed within the cells, reducing capacity. During long-term storage a passivation layer may form on the battery's anode. The layer acts as an insulator, diminishing the capacity as much as 55%.

After repeated discharge-charge cycles, the long-term over-charging and storage effects are overcome and the battery will deliver its rated capacity.

A battery is considered fully discharged if the terminal voltage is 1V/cell or less when the battery is under a 1C load. A 1C load draws a constant current while discharging a battery and reduces a fully charged battery to a 1V/cell level in one hour. The load normally is specified by the battery manufacturer.

The charger should not discharge the battery below 1V/cell. If it does, weak cells in the stack may undergo a polarity reversal that would shorten the battery's useful life.

Charging currents

A charger should deliver a constant current at a level that charges the battery fastest. For rapid-charge batteries, a 1C charging rate is preferred. On standard batteries, a C/4 charge rate should be used, provided the charger can monitor the state of the charge and reduce the current to a trickle or remove current from the battery completely when a full charge is attained.

Trickle charges

A trickle current prevents the battery from discharging itself it is left in the charger for an extended period.

A battery charged with the maximum safe current accepts the charge more efficiently. The battery will deliver as much as 10% greater capacity for a given amount of charge - comparing a 1C charging rate to a 0.02C rate, for example.

A charger with 1C discharge and 1C and C/4 rates theoretically can discharge and charge a rapid-charge battery fully in less than 2.5 hours. A standard-charge battery would need less than seven hours.

Determining full charge

>Jim AC6XG

No, Jimbo, sorry, it ain't the 'same thing'. Working DX in a pileup on CW has
nothing to do with 'keying down on as many other stations as possible'. That
may be how you do it on the repeater, but that's not how it's done on CW on
HF. It requires operator skill, good timing, experience in figuring out how the
DX is picking people up, etc. Not quite the same as putting the radio on your
favorite channel and pushing the mic button.........

Sam, I first experienced the same problem you have experienced about 20 years ago while attempting to load a vertical antenna on 75 meters with about 100 watts from a Heathkit HW-101....burned the fire out of my upper lip on the microphone.

You can get rid of the problem and continue to run the power that you wish to run, but you have to have a low impedance path for the RF to go to ground. MFJ (?) makes a devices which essentially creates a resonant circuit on your ground at your problem frequency and lowers the voltage on the chassis. But, you don't really need to spend the cash.

Try this. Measure a quarter wave length (about 60 feet) of 14 gauge or so wire and attach that to the ground of your equipment. Run the wire out of the shack and along your foundation...bury it if you care to. I've had some pretty good luck with this type of RF ground.

Hope this helps.

Gee, Gary, you just blew your image. We all thought you were Hi Tek.

'Real hams do it on the giga hertz at 56k baud, and real hams dig tower holes with a post hole digger'. I don't know, something just doesn't seem to fit.

Personally I think post hole diggers are an obsolete, antiquated way to dig a hole that should be banned. Why should today's modern digital hams be forced to have a post hole digger jambed down their throat just because they want to have a tower ? No commercial outfit uses post hole diggers anymore. They all have gas powered augers, and big trucks with giant drill bits. Why should hams be subject to using silly, outdated, antiquated tools for digging holes when nobody else is using them ? To suggest a ham dig a tower hole with a post hole digger is nothing but HAZING ! Just because YOU like having blisters on YOUR hands doesn't mean ALL of us have to like it. How about people with disabilities ? Do you expect disabled people to spend two days in the yard with a post hole digger just because YOU did it ? What about people who live in places where the dirt is REALLY HARD ? Should they be kept out of ham radio just because of your silly post hole digger hazing ritual ?

I think not. I think people should be able to just pick up the phone, call one of those guys with the big trucks with the giant drill bits, and let THEM come over and dig the hole for the tower. Post hole diggers are keeping a lot of quality, qualified people out of ham radio, and it's time this hazing ritual come to an END !!! I am going to write to the ARRL and WARC 99 and tell them I think it's about time to get rid of post hole diggers for ever !!!

Know of anyone out there doing stereo atv - interlaced left/right video?
I have the capability (multiplexer, monitors, software, etc) and was
wondering if this has been attempted yet. Hams seem to lead the way in
many cases. Info on stereovideo at http://www.3doptics.com

Of course this argument will never be resolved...there are strong points on either side of the issue, and you appear to approach the situation as alot of folks do, without looking at what has made Amateur Radio work besides part 97.

Unfortunately, the rules and regulations the FCC set up regarding the Amateur Radio Service do not really address what keeps the service working, what keeps people coming back to the hobby. That's where things depart from the neat world of rules and regulations or even pure logic.

People like to belong to something special. We like to identify with groups. We are attracted to the notion of community. And what is particularly interesting is that people who share a common background that may have involved some hardship, some fun, some challenge etc. tend to be proud of their "heritage". You see this all over the place in Alumni organizations, VFW groups, etc. It is that collection of experience that helps glue the Amateur Radio Service together and make it something special....not just a collection of rules and regulations that we can use to stake our claim to spectrum space with. It is community.

As we slowly take away the significant things from Amateur Radio that create a sense of shared identity, a sense of community (like the CW requirement, or homebrewing equipment), we start to lose those things that keep us "bonded", that keep us comiserating (!), that keep us mutually respectful of each others' committment to the hobby.

Replace that experience with a 610 form, a few bucks, and the published answers to a simple quiz and your community goes away forever and is replaced with a reasonable facsimile of CB in the 70's. I for one loathe a future like that for amateur radio. Make room for tradition; value is there, intended or not.

4199. HELP re 10 meter from KB5UGX

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-20 00:00:00 UTC
From: rclark2004@aol.com
Message-ID: <19961220020401.VAA26254@ladder01.news.aol.com>
Source record: 209523

After having tech + license for several years, finally had time to try HF. Expected to be able to hear some activity and make some contacts on 10 M during the December 14-15 ARRL contest. Tried about five times at various times during the two-day contest period and did not hear any activity on the novice phone (28.350 - 28.400) or the phone (28.550 - 28.650) frequencies. No response to CQ's on the novice phone frequencies. On 20 meter phone frequencies, could pick up lot of conservations.

Radio is a Kenwood TS-450S with auto antenna tuner. Antenna is a Cushcraft R5 vertical.

Questions: Did others participate in or hear activity on 10 M during this time? Any suggestions as to why I didn't hear any activity?

Please respond via E-mail.

Thanks.

>Jeff is right. He didn't say that it was impossible, or even very difficult, but a CW
>TX is an excellant _START_.

I would not recommend building a CW transmitter as the first project
for a new ham interested in homebrewing. There are a lot of useful
simple power supply, audio and simple digital projects to start with.
These are easy to debug with no or very simple test equipment. It is
important, that the first few projects for a new homebrewer are
finally successful (maybe after some debugging). Then it is time to
try some RF projects, such as receivers or transmitters.

There is no need for the CW transmitter to be the first homebrew
project or that a CW transmitter would have to be included in the
career of a homebrewer. In the days of firebottles, building a single
tube CW transmitter as the first project was certainly justifiable,
but today, there are many alternative ways to start the homebrewing
career with small and cheap (useful) projects.

I hope you guys have a blast! Just one thing...Why no VHF/UHF/SHF
operating?
You are excluding a great many hams in your state from participating.
Was this intentional elitism or just a sloppy oversight?

>load?

All of the PC supplies I've seen require a load on the 5 volt bus to operate correctly. Usually a couple of amps draw is enough to allow them to maintain regulation. A pair of 10 watt 4.7 ohm power resistors in parallel forms a good load. They're switchers, of course, and need a load to operate correctly. Usually the regulation is done on the 5 volt bus, and the other voltages just follow this.

Most PC supplies only have about 2 amps capacity on the +12 volt bus, and that isn't enough to power much of an amateur radio. The bulk of the current capacity is on the 5 volt bus, which may be able to source 20 amps. Newer supplies also often have a 2 amp capacity on the -12 volt bus, but older supplies could only source a few hundred milliamps on the -12 volt bus.

Mostly, I consider PC supplies merely as a source of parts for amateur radio work. They aren't of much use as power supplies except in computers and other things which need lots of 5 volt current. They also often generate a lot of RF noise, and RF ingress can cause them to lose regulation and allow the output voltage to soar to very high values. That's a recipe for fried radio.

>
>On the contrary, an EMP will not really affect people, but it will do
>a good job of destroying most unprotected transistor circuitry. Old
>tube technology is pretty much immune.

That's the myth, but it has been pretty well discredited. For a
normal low air burst or ground burst detonation, the EMP effects
reach no further than the flash burn and blast effects, IE roughly
30 miles for the typical "city buster" bomb. In other words, if it
cooks your radio, it'll cook you too.

For a very high altitude detonation, EMP effects can spread over
a wide area outside the range of flash burn and blast effects.
But to be damaged, electronic equipment needs to be connected to
fairly long unprotected exposed conductors in order for enough
voltage to be induced to cause breakdown. The ARRL published tests
on a number of amateur radios, tested in a military EMP simulator,
to see what would typically happen in such a case. Battery powered
VHF/UHF equipment using a "rubber ducky" antenna was immune to damage.
Equipment connected to unprotected mains power suffered power supply
damage. And HF equipment connected to unprotected outside antennas
suffered receiver front end damage. For solid state equipment, this
damage was to the first RF stage transistor, for tube equipment,
it was damage to the first stage grid resistor. No transmitters
suffered damage.

And there is effective EMP protection available. EMP can be
considered merely as a fast risetime form of nearby lightning
strike. In both cases, an induced surge enters the equipment
via a long exposed conductor. If you are using good lightning
surge protection with fast risetime protectors, such as the
EMP rated units sold by Polyphaser (and others), and have

practiced the kind of station layout I've preached about here
many times, there should be no more cause for concern about
EMP damage than from lightning surge damage.

Thanks to inverse square effects, an EMP detonation at a 200
mile altitude, the ideal height to maximize EMP effects, has
a field strength at your antenna about equivalent to a lightning
strike at 7 miles. But the effect on very long exposed conductors,
like the power grid or the telephone grid, is as if there were
simultaneous lightning strikes 7 miles from *every* point of the
grid. This causes a huge voltage to develop on these extended grids,
and can cause severe damage to them. Your radio and antennas don't
represent such a widespread grid, so they are only subjected
to the equivalent of a single lightning surge.

In any case, if you were to suffer EMP damage, the receiver and
mains power supplies would be the most likely candidates for
damage. CW transmitters offer you no advantage in either of those
cases since you still need a working receiver and power source to
establish communications regardless of operating mode.

And frankly, for some time (perhaps years) after a massive exchange
of nuclear weapons, HF would be useless thanks to disruption of the
ionosphere. Only VLF would work for long range communications, which
is why the military operates VLF stations for nuclear command and
control. VHF+ would continue to work for short range communications.
Since neither typically uses Morse, Morse knowledge would be virtually
useless after a nuclear exchange.

>
>Does anyone have a recommendation for a hamstick mount, as in
>a bumper mount?

I don't recomend bumper mounts on a SUV body. The radiation center of the antenna will be below the body line, and performance will be poor. As you drive, wind whipping of the antenna will grossly detune it as the distance between its radiation center and the adjacent vertical body panel changes, causing wild SWR variations to the rig. (And of course you can't open the rear hatch without removing the antenna.)

You need to either get the radiation center well above the body (preferred), or well away from the body. One way to do the latter is with an extended trailer hitch mount. This interferes with hatch opening too, but it works better than a bumper mount. If you have a Class III hitch, you can use a quick disconnect trailer tongue so you can easily remove the antenna when you want to open the hatch.

Better though is one of the three magnet HF antenna mounts placed on the roof. (They don't offer enough body groundplane coupling capacitively, however, so be sure to use a ground strap from the antenna base to the nearest attachment point, a roof rack mount point will do.)

I just went through this with my Cherokee. Bumper mounts are definitely *not* the way to go on a SUV or van.

Odd, most US LL operators only knew American Morse. The Continental
(European) Code, now called the International Code, is what we use
on the radio.

>Happy Holidays

A good starting point is the book, "Now You're Talking" which is
available from your local Radio Shack. The ARRL has a number of
other publications, operating guides and study guides, as well
as the Handbook and other more advanced resources, which can be
used to take you further than that first book will.

You should, eventually, read them all, but more important right
now is to hook up with some local club which offers classes or
other tutoring. It can be difficult to start from zero with only
books as your study aids. Contact the ARRL (www.arrl.org) for
their "Prospective Amateur Package" which includes pointers to
local groups.

> Dave/ KB2ZYO
> I Want To Belive...

It would be legal. It wouldn't be much of a technical challenge.
But it would be a hell of organizational and political challenges
to make it happen. AT&T had such a radio network over 50 years
ago, microwave relay sites every 30 miles, but has abandoned it
now in favor of fiber and satellite links. I doubt any corporation
would be interested in amateur duplication of that.

Note, however, that there are a few interesting things which
could be done to accomplish this that would have useful side
effects. If the linking were done via medium speed packet
switched links, feasible with the 56kb modem, then a useful
side effect would be a continental terrestrial packet relay
network. Latency would be a bear, however.

Of course coast to coast links have been done before, using
10m linking. 10m propagation is currently in the doldrums,
but that'll change in a couple of years. Repeater sites which
have linked 2m and 10m repeaters will once again be able to
span the continent.

Thing I was wondering about, Mike, is what do they do on 14.325 during a hurricane ? If enuff hams get on 14.325 during a hurricane, does the hurricane get scared and go away ? Or if the traffic count reaches a certain point, does the windspeed decrease ? Just wondering, I never saw a hurricane before.

Welcome to the wonderful world of R.F. Burns, Sam. Only two solutions I
can think of are a) reduce your power output on 80 meters or b) move the
eighty meter antenna away from the shack a bit farther. Sounds like the
RF field in your shack is a bit strong. Has your cat, by any chance, stopped
having kittens ?

Don't feel excluded, Doug. The 'suggested frequencies' are only suggested.
You can operate the contest anywhere your license allows you to operate.
But they did say (maybe you missed it):

>> Novice and Technician freqs: 25 kHz above sub-band edge

So I imagine you could figure out the list of suggested frequencies for Novice
and Techs by adding 25 khz to the bottom frequencies of the Novice CW segments,
i.e., 7.100 + 25 khz would be 7.125. If you are in Delaware, you should have
fun. If you aren't in Delaware, but are close, I'd suggest you grab a dipole
and a rig and head for a campground in Delaware with tall pine trees. We
did that several years back in the 70's and had a great time working the contest
from Delaware.

As far as you other statement, I think you will find more Novices/Techs
'bitching' about HAVING to upgrade than you will find other people 'bitching'
about them not upgrading.

Good luck in the contest, OM.

CBers didn't invent them either. They were used first by NASA.
Listen to the old Mercury, Gemini, and Apollo tapes. They serve
a valid purpose in half-duplex voice comms. They let you determine
if the other guy has let off the PTT and is listening, or has
merely paused to draw a breath.

Some hams are trying, see the TAPR HF-SIG.

Having a realistic channel simulator is very useful. It allows
repeated testing against the exact same conditions. But channel
simulators have limitations, and don't accurately duplicate all
real world conditions. You still need to be able to test live on
the air.

Source record: 209542

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: Yes. They aren't maintenance free, however. You need to run them at least
: once a month and change the oil frequently.

This is true for any internal combustion engine! In continuous
duty or frequent operation, the Diesel will be spec'd to have oil changes
more often than a petrol(gasoline) or lpg engine. In fairly infrequent
use, it's water absorption that's the problem, more than soot, so all the
types of engine need equally frequent changes.

: Yeah, but don't try to draw directly off the oil tank. Use your fuel
: hose and a transfer pump to keep the genset's onboard tank full. The
: worst thing that can happen to a diesel is to get a gulp of air in the
: fuel lines. Use a high quality filter in the transfer system too. Diesels
: don't like dirt, grit, or dead bugs in their fuel either.

You need to check that the viscosity of the heating oil you use
is compatible with your engine, and maybe also check the sulphur content.

: That depends. If you're loading a 30 kW unit heavily, it'll drink
: between 4 and 6 gallons an hour. If you are loading it lightly,
: it'll drink much less, 2 gallons an hour or so. (Note, fuel consumption
: doesn't scale linearly with generator size, a smaller generator may not
: get correspondingly better fuel economy.)

This is the chief justification of the Diesel engine. Running at full
power it is more efficient than an equivalent petrol/gasoline/lpg engine,
but running at reduced power the Diesel is a LOT more efficient than the
spark-ignition engines. Um let me rephrase that, at part-throttle, spark
ignition engined become dramatically inefficient, the Diesel just isn't
so bad. For light running, the Diesel can yield a 2-fold saving in
fuelconsumption compared to a petrol engined generator of comparable peak
power rating.

A hefty Diesel running a 4-pole alternator direct-drive at 1500/1800
rpm for 50/60 Hz use has a decent life expectancy. Spark ignition engines
have less low-revs torque and so you need either an extra-large engine to
compensate, or else you run a 2-pole alternator at 3000/3600 rpm this
latter does not militate for a long and happy life

Cheers
David

Ignorant of their spectrum? Hmmm. You must have a different Part 97
than everyone else. Mine sez that 20 meters extends to 14.350. I don't
see anything anywhere about 14.325.

SB QST @ ARL $ARLB099
ARLB099 Maxim Award nominations

ZCZC AG79
QST de W1AW
ARRL Bulletin 99 ARLB099
From ARRL Headquarters
Newington CT December 19, 1996
To all radio amateurs

SB QST ARL ARLB099
ARLB099 Maxim Award nominations

Headquarters is in the receive mode for nominations for the Hiram Percy Maxim Memorial Award. The award is given annually to the licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities, including, but not limited to:

Participation or leadership in organizational affairs at the local or national level.

Technical achievement.

Operating record.

Recruitment and training of new amateurs.

Public relations activities.

In keeping with the tradition of the award when it was first established in 1936, formal nominations are made by section managers. Supporting information, including the endorsement of ARRL-affiliated clubs and elected or appointed League leadership officials, should be submitted with the nomination. An award panel will review the nominations received and select the winner. The prize is a cash award of 1000 dollars, a suitably engraved plaque, and travel and accommodation expenses to enable the winner to attend an ARRL convention for a formal award presentation.

Nominations should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. Additional information concerning the character of the nominee should be as complete as possible.

The award is intended to provide a tangible reward to those deserving young amateurs who contribute their time, skills and

energies daily through their commitment to Amateur Radio. As models for their peers, and inspirations to us all, these fine young people are highly visible boosters of Amateur Radio awareness. We must continue to recognize and encourage their hard work and contributions at every opportunity.

Nominations must be sent to the section manager. Nominations must be received at Headquarters from section managers by March 31, 1997. There is no limit to the number of nominations one may make. For more information or an application form, contact Rick Palm, K1CE, Field Services Manager, at ARRL Headquarters.

While it may be true that NASA invented the 'Roger Beep', please keep in mind that DOES NOT mean they are useful for casual amatuer usage. I admit that in certain situations it may help to avoid doubling but the point you must remember is when the band is crowded and skip is in, it will quickly sound like a REAL MESS and any advantage would be quickly lost to the QRM created. If you don't believe me try listening to a CB channel and you will get the point. LEAVE ROGER BEEPS FOR THE CHICKEN BANDERS.

It's time for some more investigating!

It's hard to believe any VE would talk or e-mail another ham in this
way:

>My apologies Eric. I thought you were a Technician class
>operator. Upon closer review of you license data I see that I
>was in error. You are only a CODELESS-TECHNICIAN!!!!!
>
>You are still a wet behind the ears ham with an inflated view
>of yourself.

This is another example of the 'ugly American' viewpoint that most hams
out of the USA have of US hams.

Come on, John! Read your own posts, both here & from
'rec.radio.scanner'.

Let's have a kinder, gentler John Mackey.

Happy Holidays John,

KP

> It seems to me that I remember an old high school physics experiment in
which a sharp point was connected to a source of static electricity (a
Wimshurst machine, I think...likely misspelled). When a charge was
placed on the sharp point, a noticible current of air was produced as a
result of the electrostatic charge being released from the sharp point.
A company which used to manufacture lightning protection systems took
advantage of this property of sharp points by building an array which
would, when connected to a good ground, reduce the cloud to ground
potential and prevent lightning strokes. In one installation, a Windsor
radio station measured the static disappation current and fired up
standby power ahead of impending storms thus avoiding the outages
involved with bad weather. These systems can get pretty elaborate.

>the short-range comms they seems to be happy with.

Assuming the above is not sarcasm ...

I'm not sure what you mean by short-range. I've worked into repeaters
>100 miles away on my 2m HT connected to a discone. With some good
antennas, I've been able to work close to 1000 mi on 2m SSB. When AO-13
was up, I was able to work Japan and some European countries. Considering
that at apogee, the path length was over 46,000 km, I'm at a loss to
explain what "short-range" means in your world.

Currently, my interest in amateur radio is severe weather spotting.
This requires reliable, county-wide communications with spotters that are
sometimes mobile. Care to explain how this would be done at HF? I'm
not aware of any spotter groups using 11m on a regular basis, but their
reports would be welcome if we can work out the details of liason with the
EOC.

They must have been very busy on Wednesday (12/18). Inspecting the FCC database updates it looks like they got all the way into processing applications received early December! Vanity got the better of me and I submitted an application in late November that also was granted on Wednesday.

Anyone want to guess when the Area 4 1x2's will run out? Today's report at www.qrz.com only lists 19 unassigned (and those might actually not be available because of the 2 year waiting period).

The ARRL Letter
December 20, 1996

IN THIS EDITION:

* Phase 3D launch delayed!
* WRC-99 Committee supports retaining CW requirement
* NTIA report bullish on HF bands
* League "heartily supports" international licensing plan
* Vice Director John Thernes, W4ZN, resigns
* Vanity update
* Solar report
* Stellar conclusions
* More back issues of QST now on CD-ROM
* Maxim Memorial Award nominations open
* Transatlantic anniversary a success
* QRP-ARCI announces FDIM event
* In Brief: Affiliated clubs survey; DARA scholarships; ARRL/TAPR Digital confab on the 'net; STSPLUS Ver 9650 available; E-mail call sign database access; Listing stolen gear; AEA, not AES!; VP8CME; B+K Precision to GEM Illinois Inc

---

EDITOR'S NOTE: The ARRL Letter will not be published Friday, December 27, 1996, because of the holidays. Please check W1AW bulletins (which also are posted on the ARRLWeb page, http://www.arrl.org) for any late-breaking news. The next edition of The ARRL Letter will be published January 3, 1997. I'd like to take this opportunity to thank all who have contributed to making The ARRL Letter a success and to extend holiday and New Year's greetings to all of our readers.--Rick Lindquist, N1RL

PHASE 3D LAUNCH DELAYED

The European Space Agency has announced a launch delay for Ariane 502, the rocket that is supposed to carry Phase 3D. AMSAT-NA Executive Vice President Keith Baker, KB1SF, reports that the launch has been pushed back to "early July," but said a specific launch date was not yet available. ESA said the change resulted from the recent establishment of a "detailed timetable" that's required to permit launch.

A brief ESA news release said: "As each individual operation will require very close analysis, the 502 campaign is scheduled to begin on Wednesday 9 April 1997, the launch itself being planned for early July."

"We'll be ready," said Baker, adding that the new schedule will give AMSAT "a little more time to make things right." The Phase 3D satellite itself is under assembly in Orlando, Florida. Baker said there's still a lot of work to be done, but the project was on schedule for an April launch. The new launch schedule means that the Phase 3D satellite will not be operational until September or October.

"Obviously we would like to have the satellite in orbit a lot sooner," said Baker. "But we don't want anything to be launched if it's not ready."

AMSAT-NA President Bill Tynan, W3XO, welcomed the news. "It gives us a definite goal to shoot for in our preparations of the Phase 3D spacecraft," he said but added that "for every month the launch is pushed back means more funds are needed." Tynan noted that a request for additional contributions to the project will go out to all AMSAT members. "It is particularly important to the successful completion and launch of Phase 3D that recipients of this letter respond as generously as they can." he said.

WRC-99 COMMITTEE SUPPORTS MORSE CODE TREATY REQUIREMENT FOR HF

The special committee created by the ARRL to study issues relating to the 1999 World Radiocommunication Conference (WRC-99) has recommended that the ARRL Board of Directors not support changing the treaty requirement for Morse code testing to operate below 30 MHz. The committee submitted its final report to the ARRL Board this week.

The committee report contains recommended ARRL positions regarding possible changes in Article S25 of the international radio regulations. Consistent with the results of a survey of ARRL members, the committee recommended no change in the existing treaty obligation that administrations test prospective amateur licensees on their Morse code ability before authorizing them to operate below 30 MHz. The committee did support changes to Article S25 that would:

* Eliminate the so-called "banned countries" list
* Establish that providing communications in the event of natural disasters is a normal and desirable part of the international service provided by radio amateurs
* Reduce restrictions on international communications on behalf of third parties
* Aid in the establishment of an "International Amateur Permit."

The committee report also responded to the Board's request that it study possible changes to the amateur licensing structure in the United States. The committee offered some proposals for change, but recommended that the Board take no action on this part of its report until the committee's proposals are shared with the membership and there is an opportunity for member comment.

The Board will consider the committee's report and recommendations at its next regular meeting, January 17-18, 1997. If the Board accepts the report, it will be available for public release. An article giving the results of the survey will appear in February 1997 QST.

NTIA REPORT BULLISH ON ADDITIONAL HF ALLOCATIONS

High Frequency (3-30 MHz) Spectrum Planning Options, a planning document released December 13 by the National Telecommunications and Information Administration, says the HF spectrum is flexible enough "to accommodate most, if not all," demands for additional HF spectrum, including new and bigger HF ham bands. The NTIA is an Executive Branch agency in the Department of Commerce that's responsible for developing telecommunications policy and advising the President on telecommunications matters. The NTIA's latest report is a follow-on to an NTIA study released in March 1995 (see QST, Jun 1995, p 75).

The Options report addresses spectrum availability and long-range planning options for services that were identified in the earlier report as needing additional HF spectrum--including Amateur Radio. The report cites a potential 900 kHz or so of expanded or upgraded allocations for Amateur Radio in the HF spectrum, including:

* An exclusive, worldwide allocation at 3500 to 3800 kHz
* A new band at 4945 to 4995 kHz (additional technical studies would be required)
* An "aligned worldwide" allocation at 6900 to 7200 kHz (replacing the current band at 7000 to 7300 kHz for the US and the rest of Region 2)
* Expanded worldwide, primary allocations at 10100 to 10350 and 14000 to 14400 kHz
* Expanded allocations at 18068 to 18318, 24740-24890, and 28000 to 30000 kHz.

Some of the potential expansions proposed for amateurs and broadcasting are mutually exclusive or could involve sharing by the two services. These include the potential expansions at 30, 20 and 17 meters. According to the report, ham radio allocations account for 13.1% of the HF spectrum (3 to 30 MHz). "There are no current plans to auction any HF spectrum," the NTIA report states, but notes that additional allocations for ham radio would come at the expense of other services--primarily fixed, fixed-mobile and broadcasting. "The expansion and upgrading of amateur allocations in the 10 MHz, 14 MHz, 18 MHz, and 24 MHz [bands] appear acceptable; however, this will depend on future decrease of requirements for the aeronautical mobile (R) or the fixed services internationally," the report said. Changes in the 80 and 40-meter bands "will require the inclusion of these proposals in US preparations for future WRCs," the report added. A requested allocation at 6900-7200 would serve "to reduce inter-regional sharing and interference from HF broadcasting in the 7100-7300 kHz band," the report said. The report called the requested upgraded allocation at 3500 to 3800 kHz "a good candidate for a common worldwide exclusive amateur allocation at the 3.5 MHz band." The additional allocation of 3800 to 4000 kHz to the Amateur Service in Region 2 would not be affected.

To help satisfy demand for additional HF spectrum access, the report suggests more efficient use of current allocations, moving current HF spectrum users to other portions of the HF spectrum, use of other non-spectrum technologies and use of higher frequencies. The report also said sharing--and removal of some "exclusive" allocations--might be another

option.

Calling ham radio "the oldest radio service" and one that "pre-dates regulation," the NTIA report casts the hobby in a favorable light. "Radio amateurs have made significant contributions to the field of radio propagation, HF single-sideband radio, HF data communications systems, packet radio protocols and communications satellite design." The report goes on to say that ham radio "continues to play an important role in disaster-relief communications, where amateurs provide radiocommunications independent of the telephone network or other radio services."

To view the complete report, set your Web browser to http://www.ntia.doc.gov/osmhome/reports/hfspo/contents.html.

LEAGUE "HEARTILY SUPPORTS" FCC PROPOSAL TO EASE INTERNATIONAL OPERATING

In comments filed in response to an FCC proposal that would make it easier for visiting foreign hams to temporarily operate in the US, the ARRL said it "heartily supports" the plan, but suggested some changes. Earlier this year, the FCC proposed amending the Amateur Radio rules to make it easier for hams holding a European Conference of Postal and Telecommunications Administrations (CEPT) radio-amateur license or an International Amateur Radio Permit (IARP) from certain countries in the Americas to operate during short visits to the US.

If finally approved, hams would be able to operate for short periods in participating countries without first obtaining another license or permit from the host country. The arrangement would make it easier for US hams to operate stations temporarily in several countries in Europe, Central and South America. Likewise, hams from those countries would be allowed to operate stations in places where the FCC regulates ham radio.

The principal change recommended by the ARRL involved the length of time CEPT or IARP holders would be allowed to operate in the US. The FCC had proposed extending operating authority for "up to 180 days within the preceding five years [sic]." In its comments, the League called the limitation "unnecessarily restrictive," and suggested a CEPT license or an IARP "be valid for use by the holder for a period up to one year" from the date of arrival in the US but not beyond the expiration date of the ham license issued by the visitor's home country.

The two classes of CEPT licenses would correspond either to Amateur Extra or Technician class. Resident aliens or US citizens could not operate in the US under a CEPT license or IARP.

In 1995, the ARRL petitioned the FCC to implement the CITEL/Amateur Convention. The League also asked the Commission to acknowledge arrangements to be made between the ARRL and the Department of State to issue IARP documents to US citizens for use in other CITEL countries. The FCC also has asked the State Department to apply for participation in the CEPT Agreement as a non-CEPT country.

VICE DIRECTOR JOHN THERNES, W4ZN, RESIGNS

Great Lakes Division Vice Director John Thernes, W4ZN, of Covington, Kentucky, has announced his resignation, effective December 17. In a letter to ARRL Secretary David Sumner, K1ZZ, Thernes, 48, said he was stepping down in order to attend graduate school.

"This is a decision that has been very difficult for me, but one I must make," Thernes said in his letter. He plans to pursue a full-time graduate program to obtain his MBA. Thernes said he'd like to set up an international consulting business eventually and believes the MBA and his skill in Japanese will turn out to be a successful combination.

"Amateur radio is a great public servant and a wonderful hobby," wrote Thernes in wishing his former Board colleagues Godspeed. ARRL President Rod Stafford, KB6ZV, will appoint a successor.

VANITY UPDATE

The FCC reported December 18 that it's processed vanity applications received through November, which means the FCC is less than three weeks away from being completely caught up with its current application backlog. However, a spokeswoman at the FCC office in Gettysburg, Pennsylvania, said she didn't expect the FCC to get to the applications received during December until after the first of the year.

Gettysburg issued more than 700 new Vanity grants this past week. But, some 640 applications were set aside for special handling, including those for which the FCC was unable to grant any of the applicant's call sign choices. However, the FCC said many applicants failed to include their current call signs under Item 6 on the Form 610V application, and this also can delay issuance of a new call sign.

The FCC has not announced an opening date for Gate 3.--Bart Jahnke, W9JJ

SOLAR FLUX, SUNSPOT NUMBERS ON THE RISE!

Solar prognosticator Tad Cook, KT7H, in Seattle, Washington, reports: Solar activity is up again with the return of region 7999. Average flux was up this week by 13 points, the sunspot numbers up over 17 points, and A index up 1 point. Flux is expected to rise up to around 96 on December 23, then drop below 80 on December 31, then up to the mid-80s again around January 5 and 6. Expect the A and K indices to be up again around January 6, 11 and 12.

Sunspot numbers for December 12 through 18 were 32, 31, 30, 25, 27, 38 and 33, respectively, with a mean of 30.9. The 10.7-cm flux was 81.1, 81.7, 82.5, 85, 86.2, 86.4 and 88.4, respectively, with a mean of 84.5. The planetary A indices for the same period were 8, 6, 5, 10, 10, 8, and 5, respectively, with a mean of 7.4.

SOLAR CYCLE 23 PROJECT: STELLAR CONCLUSIONS

The Solar Cycle 23 Project--carried out by the NOAA Space Environment Center (SEC) with the support of the NASA Office of Space Science--predicts big things for Cycle 23! The panel, which met earlier this fall in Boulder, Colorado, found "reasonable consensus" for "a large solar cycle with a

smoothed sunspot maximum of 160." The panel says this is comparable to the last two cycles, but won't exceed Cycle 19, "the largest cycle on record."

"While the month of solar minimum is yet to be determined, recent low levels of activity imply that the minimum is at hand, and will occur during the final months of 1996," the panel found. "If so, Solar Cycle 23 will most likely peak in early 2000."

The panel said geomagnetic activity during the cycle would be comparable to that experienced in recent cycles, resulting in annual average levels among the highest in the 128-year record, and the probability of severe geomagnetic storms "will be the greatest during an extended period lasting from 1999 through 2005."

The goal of Solar Cycle 23 Project was to survey forecasts for the amplitude and phasing of the most common indicators of solar and geomagnetic activity and to recommend a forecast or group of forecasts for operational use. The Center recruited a scientific panel to assess prediction techniques and arrive at a reasoned consensus, including uncertainty, on how the solar cycle will develop. The panel of 12 scientists from 10 agencies included representatives from Australia, Germany, the United Kingdom, and the US. Panel findings were authored by J. A. Joselyn, J. Anderson, H. Coffey, K. Harvey, D. Hathaway, G. Heckman, E. Hildner, W. Mende, K. Schatten, R. Thompson, A. W. P. Thomson, and O. R. White. See http://proton.sel.noaa.gov:80/info/Cycle23.html on the World Wide Web for a summary of the panel findings. A more detailed report will be available as a NOAA Technical Memorandum, and as an article in the open literature.

MORE BACK ISSUES OF QST ON CD-ROM AMONG NEW ARRL PRODUCTS

You don't need to keep a musty stack of back issues of QST in your basement anymore. The ARRL's QST View CD-ROM sets are now available! You can order 1990-94 or 1985-89--or both ($39.95 each). QST View CD-ROM includes back issues of QST in convenient, space-saving CD-ROM format. Each page--all the ads, articles, columns and covers--has been scanned to provide a black-and-white image you can either read from your screen or print. Easy-to-use software included on the CD lets you search for articles by title and author, select specific year and issue, and browse individual articles or columns. Each three-disk set has an index to aid in finding the page or section of the issue you want to view or print.

In addition, The ARRL Handbook CD 1.0, the electronic version of The 1997 ARRL Handbook for Radio Amateurs, now is available for immediate shipping. The ARRL Handbook CD 1.0 includes all the text, illustrations and software found in the printed version. Special features include versatile search capabilities to find the exact information you're looking for, audio simulations of a wide variety of Amateur Radio modes, and bookmarks that allow easy return to the topics you use most often. Pages or sections can be printed or saved to the clipboard for use in other Windows applications, plus zoom in and out capability allows you to see the drawings, photos and text enlarged or reduced. The ARRL Handbook CD 1.0 is $49.95 plus $4 shipping/handling.

But wait! There's more! You can order these and other products using the ARRLWeb on-line, where you'll find lots of great gift ideas catalog (set your browser to http://www.arrl.org/catalog/specials/holiday_special.html). And, if you order $50 or more (excluding shipping and handling charges and applicable taxes) on or before December 31, 1996, you'll receive a handsome ARRL W1AW ceramic coffee mug absolutely free. Check it out!

Shopping is simple with the ARRL on-line catalog. Just select the products you want by clicking on the "Add to shopping basket" links in the catalog. When you've selected everything you want, click on the catalog's "Finish order" link to complete your order.

Other new products include The ARRL Antenna Compendium 5 (latest edition) and the brand-new Increasing Your Code Speed: 15 to 22 WPM audio CD!

MAXIM MEMORIAL AWARD NOMINATIONS OPEN

Headquarters is in the receive mode for nominations for the Hiram Percy Maxim Memorial Award. The award is given annually to the licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities, including, but not limited to:

* Participation or leadership in organizational affairs at the local or national level;
* Technical achievement;
* Operating record;
* Recruitment and training of new amateurs;
* Public relations activities.

In keeping with the tradition of the award when it was first established in 1936, formal nominations are made by section managers. Supporting information, including the endorsement of ARRL-affiliated clubs and elected or appointed League leadership officials, should be submitted with the nomination. An award panel will review the nominations received and select the winner. The prize is a cash award of $1000, a suitably engraved plaque, and travel and accommodation expenses to enable the winner to attend an ARRL convention for a formal award presentation.

Nominations should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calendar year. Additional information concerning the character of the nominee should be as complete as possible.

The award is intended to provide a tangible reward to those deserving young amateurs who contribute their time, skills and energies daily through their commitment to Amateur Radio. As models for their peers, and inspirations to us all, these fine young people are highly visible boosters of Amateur Radio awareness. We must continue to recognize and encourage their hard work and contributions at every opportunity.

Nominations must be sent to the section manager. Nominations must be received at Headquarters from section managers by March 31, 1997. There is no limit to the number of nominations one may make. For more information or

an application form, contact Rick Palm, K1CE, Field Services Manager, at ARRL Headquarters.--Rick Palm, K1CE

TRANSATLANTIC ANNIVERSARY A SUCCESS

The W1BCG operation from Greenwich, Connecticut, to commemorate the 75th anniversary of the first successful transatlantic tests on ham radio made over 800 contacts with the replica transmitter--despite its being out of service for a short time late on the evening of December 14 because of a keying relay problem. Operators reported the noise level was high enough to cover many stations on 160 meters. "We could hear pileups of about S 5-6 signals, but the noise kept us from picking the pileup apart and working through it," said Al Brogdon, K3KMO, an ARRL staff member who volunteered to be one of the W1BCG operators over the weekend.

On December 11, 1921, the first shortwave transatlantic radio transmission was sent from Greenwich, Connecticut, to Paul Godley, 2ZE, an American amateur in Ardrossan, Scotland (see QST, Dec 1996, page 30, for details). The US station, 1BCG, was owned by Minton Cronkhite. One of the W1BCG operators was Mike Raide, W2ZE, who obtained the modern-day counterpart of Godley's old call sign via the vanity call sign program. W1BCG is the club station call sign of the Shoreline Amateur Radio Club.

The replica 160-meter transmitter for W1BCG was at the home of George Wells, KA1JUV. The antenna was an 80-foot shunt-fed tower with 50 temporary radials laid out on top of the ground. Transmitter output was 300 W. (After the operation was over, event coordinator Tim Walker, N2GIG, took up the more than one mile of wire used for the radials!) The group used a modern transceiver as a receiver for the event.

The replica transmitter was heard by several British hams, who telephoned to report the reception. At least one of those listening on the other side of the Atlantic heard the replica transmitter on a genuine 1920s-era receiver! The British group was unable to QSO W1BCG because of the low power limit on 160 meters in the UK and the high noise in Greenwich, Connecticut.

W1BCG racked up nearly 1000 additional contacts on all bands during its special event operation. A lot of incoming QSLs already have shown up, and W1BCG QSL cards will be sent as soon as possible. If you worked W1BCG during the commemorative operation and would like a certificate, write SARA, Box 4225, Stamford, CT 06907-0225.

For more information and photographs of the W1BCG operation, check the Web page of the Greater Norwalk ARC at http://www.norwalk.com/gnarc/w1bcg.htm.

QRP-ARCI ANNOUNCES FOUR DAYS IN MAY EVENT

The QRP Amateur Radio Club International (QRP-ARCI) holds its second annual Four Days In May QRP symposium Thursday, May 15 1997, in conjunction with the Dayton Hamvention. Amateur radio QRP presentations, workshops and demonstrations will be the focus of the full day Thursday activities to be held at the Days Inn Dayton South (513-847-8422), and featuring QRP presentations by renowned QRP authors and designers.

The annual Friday night QRP-ARCI Awards Banquet honors QRP dignitaries for their service to the Amateur Radio community. The vendors' social follows, to introduce QRP vendors from around the world. Preston Douglas, WJ2V, will be the host again this year. Saturday evening will offer a chance for QRPers to get to know the many regional North American and international QRP clubs--bring your banners! QRP Club awards will be presented to those who submit QRP construction projects for judging.

Symposium presenters should submit QRP technical manuscripts to FDIM Technical Paper Chairperson Bruce Muscolino, W6TOY/3, Box 9333, Silver Spring, MD 20916-9333, e-mail w6toy@erols.com. Presenters' papers will be bound in the 1997 FDIM QRP Symposium Proceedings, sent to all attendees.

Registration for the Thursday, May 15, 1997, FDIM QRP Symposium is $30 if paid by May 1, 1997, and $35 after that date or at the door. Registration covers a full day of QRP Symposium activities, which include the QRP technical presentations, the 1997 FDIM QRP Symposium Proceedings, lunch, and coffee. Send your registration fee (US check, money order or international money order, payable to Bob Follett) by May 1, 1997, to Bob Follett, AB7ST, 2861 Estates Dr, Park City, UT 84060; e-mail bfollett@ditell.com. Tickets for the Friday, May 16, banquet are $15. Send banquet registration fee (US check, money order or international money order, payable to Pete Meier) by May 1, 1997, to Pete Meier, WK8S, 4181 Rural, Waterford, MI 48329, e-mail pmeier@tir.com.

For more information, contact Bob Gobrick, VO1DRB/WA6ERB, FDIM publicity chairperson, e-mail 70466.1405@compuserve.com.

In Brief:

* Affiliated clubs survey: In an effort to assess the health and vitality of the League's affiliated club program, and to determine the needs and capabilities of its member-clubs, the Volunteer Resources Committee has commissioned a survey of ARRL-affiliated clubs. Survey forms have been mailed to all clubs on record as of late 1996. Completed forms are due by January 30, 1997. A summary of the results will be shared with all ARRL-affiliated clubs.--Rick Palm, K1CE

* DARA scholarships: The Dayton Amateur Radio Association is now accepting applications for its $2000 scholarships. Eight scholarships will be awarded. Initial applicants must be licensed Amateur Radio operators and high-school seniors graduating in 1997. To obtain an application, send a request with a self-addressed, stamped envelope to: DARA Scholarships, 45 Cinnamon Ct, Springboro, OH 45066-1000.--Stan Kuck, NY8F

* ARRL/TAPR digital confab on the 'net: Couldn't attend the 1996 ARRL/TAPR Digital Communications Conference in Seattle, Washington? Photos, stories and audio from the conference are available at http://www.tapr.org.

* STSPLUS Ver 9650 available: Dave Ransom has just released STSPLUS Ver 9650, shuttle and satellite-tracking software. The latest edition is primarily a features update that adds "night vision" capability where the

screen is red for use on laptops outdoors (something teachers and Boy Scout troops have requested!), and a new Location Map Mode which allows the user to specify the map center coordinates for the orthographic maps and "move around" and look at the maps, which some teachers have requested as a geography teaching tool. Version 9650 also fixes some bugs. The new version is available via anonymous FTP at ftp://ftp.mindspring.com/users/dransom. The new files for STSPLUS are in the /stsplus subdirectory. Direct comments, suggestions, and bug reports to Dave Ransom at rans7500@spacelink.msfc.nasa.gov.

* E-mail call sign database access: Mark Downing, WM7D, says you now can access the call sign data in his database by sending a message to lookup@rdatasys.com. The body of the message should say "lookup callsign," where callsign represents the call sign you wish to look up. The WM7D Web call sign server is at http://www.rdatasys.com/~mdowning/fcc/callsign.html.

* Listing stolen gear: Mark Saunders, KJ7BS, offers a free service to help hams whose gear has been lost or stolen. Check out his lost or stolen ham gear listing on his Internet home page at http://www.dancris.com/~tracker/tracker.html.

* AEA not AES! The ham radio rumor mill apparently has begun to confuse Advanced Electronic Applications Inc (AEA)--which is being sold--with Amateur Electronic Supply (AES), which is not closing. AEA recently announced plans to sell its three product lines to separate buyers.

* VP8CME: Morag Howell, GM0MUV, is currently active as VP8CME from Antarctica as part of Sir Ranulph Fiennes's cross-Antarctic solo walk expedition. Howell is the Antarctic base leader for Fiennes' expedition, which is being done to raise money for breast cancer research in the UK. She has been reported on 14,270 kHz looking for European stations on Wednesdays and Sundays between 1600 and 1800 UTC. The RSGB Web site has updates on the expedition at http://www.rsgb.org.--RSGB

* B+K Precision to GEM Illinois Inc: GEM Illinois Inc has acquired B+K Precision, a division of Maxtec International Corp. B+K Precision makes and sells electronic test and measurement equipment. GEM Illinois is a subsidiary of GMME of France, which also has an interest in Boonton Electronics in New Jersey, a maker of RF test equipment.

Ed Hare <ehare@arrl.org> writes:

>from ham to ham. I will point out the obvious -- HF is NOT the part
>of the spectrum that is under pressure. The frequencies above

Exactly. Any gains we make there are fine, but not nearly as important
as what is under threat elsewhere.

>and microwave operator whose needs must be met here. To quote somebody or
>another from US history, we will all hang separately if we don't all hang
>together.

I can't imagine which commercial interests would want HF. They didn't
want HF in the 'teens and '20s and they don't seem to want it now. The
oscar foxtrots polluting the low bands now are safe. Of course, the FCC
may decide (once they've auctioned off everything above 50 MHz) that the
few folks left on HF aren't worth the trouble and they'll just
deregulate the Amateur Service, like they did with CB. CB *was* a
useful service before the FCC abandoned it.

>73 from ARRL HQ,
>Ed Hare, KA1CV
>ARRL Laboratory Supervisor

This is why I am mostly satisfied with the ARRL. Good posts like this
one. And you can call them and ask them about just about anything and
get the right answer. And they are the ONLY ones in Warshinton fighting
to keep what we already have.

I don't like the ARRL because 1) it's biased towards HF (because surveys
of members say that HF is most important) 2) younger members subsidize
older members. The older members who go on about CW and HF) and who are
making up a larger and larger percentage of the membership, leading to (1).
3) They would have lost money in the last 2 years had it not been
for generous donations from the estates of Silent Keys and nobody has
taken that fact seriously until very recently.

Like I said, mostly satisfied.

desmith@telalink.net (Doug Smith) writes:
>220V is a little more dangerous; it's a little more likely to cause
>injury or death if you're shocked, and a little more likely to cause a
>fire if something else happens. The difference is minimal.

I've heard it argued that 220-240 V at 50 Hz is no more, and perhaps less,
dangerous to humans than 120 V 60 Hz. Apparently 60 Hz is a bad choice
of frequency because it easily causes fibrillation in the heart muscle,
while 50 Hz is less likely to. So even though your body draws twice
the current at 240 V than 120 V, it's less likely to kill you. But this
was someone from Britain arguing this. Does anyone know for sure?

4238. A Ham's Night Before Christmas (Poem)

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-21 00:00:00 UTC
From: kn4aq.gary@mms.net
Message-ID: <59hfdd$51c@ralph.vnet.net>
Source record: 209312

(a "reprint" for those who might have missed it the first time - KN4AQ)

A Ham's Night Before Christmas

(Yet another corruption of Clement Clarke Moore's classic Christmas tale,
this time distorted by Gary Pearce KN4AQ, of the Raleigh Amateur Radio
Society, Raleigh, NC, December 2, 1996.)

T'was the night before Christmas,
And all through two-meters,
Not a signal was keying up
Any repeaters.

The antennas reached up
From the tower, quite high,
To catch the weak signals
That bounced from the sky.

The children, Tech-Pluses,
Took their HT's to bed,
And dreamed of the day
They'd be Extras, instead.

Mom put on her headphones,
I plugged in the key,
And we tuned 40 meters
For that rare ZK3.

When the meter was pegged
by a signal with power.
It smoked a small diode,
and, I swear, shook the tower.

Mom yanked off her phones,
And with all she could muster
Logged a spot of the signal
On the DX PacketCluster,

While I ran to the window
And peered up at the sky,
To see what could generate
RF that high.

It was way in the distance,
But the moon made it gleam -
A flying sleigh, with an
Eight element beam,

And a little old driver
who looked slightly mean.
So I though for a moment,
That it might be Wayne Green.

But no, it was Santa
The Santa of Hams.
On a mission, this Christmas
To clean up the bands.

He circled the tower,
Then stopped in his track,
And he slid down the coax
Right into the shack.

While Mom and I hid
Behind stacks of CQ,
This Santa of hamming
Knew just what to do.

He cleared off the shack desk
Of paper and parts,
And filled out all my late QSLs
For a start.

He ran copper braid,
Took a steel rod and pounded
It into the earth, till
The station was grounded.

He tightened loose fittings,
Resoldered connections,
Cranked down modulation,
Installed lightning protection.

He neutralized tubes
In my linear amp...
(Never worked right before --
Now it works like a champ).

A new, low-pass filter
Cleaned up the TV,
He corrected the settings
In my TNC.

He repaired the computer
That would not compute,
And he backed up the hard drive
And got it to boot.

Then, he reached really deep
In the bag that he brought,
And he pulled out a big box,
"A new rig?" I thought!

"A new Kenwood? An Icom?
A Yaesu, for me?!"
(If he thought I'd been bad
it might be QRP!)

Yes! The Ultimate Station!
How could I deserve this?
Could it be all those hours
that I worked Public Service?

He hooked it all up
And in record time, quickly
Worked 100 countries,
All down on 160.

I should have been happy,
It was my call he sent,
But the cards and the postage
Will cost two month's rent!

He made final adjustments,
And left a card by the key:
"To Gary, from Santa Claus.
Seventy-Three."

Then he grabbed his HT,
Looked me straight in the eye,
Punched a code on the pad,
And was gone - no good bye.

I ran back to the station,
And the pile-up was big,
But a card from St. Nick
Would be worth my new rig.

Oh, too late, for his final
came over the air.
It was copied all over.
It was heard everywhere.

The Ham's Santa exclaimed
What a ham might expect,
"Merry Christmas to all,
And to all, good DX."

It does. We only have perhaps a couple hundred idiots on the HF bands
as opposed to the thousands that inhabit 11 meters. Plus, for instance,
we don't have Carl on HF. We can thank the CW requirement for that, if
nothing else.

4240. Help Locating A Book Re: Blizzard Of '77

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-21 00:00:00 UTC
From: Radioman@localnet.com
Message-ID: <59hhri$lgh@prometheus.localnet.com>
Source record: 209314

First, sincere apology for what may be an inappropriate topic. I post
here out of two reasons. 1. desperation and as some know, many hams
have a sincere interest in weather & climate sometimes and some.
hams are the guys who work at the NWS in places. So, if you can,
bear with me a bit. I think there was a book published about 10 years ago
or so dealing with pictures and personal narratives of individuals who
endured this weather situation. The name of the book escapes me!
I (now retired) was a police officer during the blizzard and have to
say that some of my most memorable
thoughts when looking back on my career are from things during that
situation. I got to do things such as deliver medicine to stormbound
people, answer burglar alarms that required riding over 15 ft. drifts
to get near the site, even get things like milk & bread & eggs for
people who got caught short (there was not much real warning before
this one hit)
Anyhow, If anyone can get the name of this book for me, I would very
much appreciate it.
Thanks and best wishes to all for a great holiday season
Ray Miller N2NJK

No, that's *not* what you said. You said "folks who run '60 over should be
fined." Period. You made no mention of exceptions.

>Well, as Gary has pointed out, the ITU regulations define ham radio as a
>service for the pursuit of technical experimentation and self-education
>(perhaps more eloquently than our own FCC rules, though my reading of
>Part 97 clearly gives the same impression) ...
>
>And there are LOTs of "art" things that are, bu any *reasonable,
>rational* definition garbage ... for example the controversy a while
>back about the guy who got a (rather substantial) grant from the
>National Endowment for the Arts for his "art" ... which consisted of a
>plastic dashboard Jesus in a bottle of piss ... sorry, but I don't
>think any *REASONABLE* definition of "art" could encompass that ...

Then you had better re-read part 97.1. The word "art" is used twice with
reference to amateur radio.

4243. Solar Cycle 23 - Feast or Famine ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-21 00:00:00 UTC
From: flaugher@thepoint.net
Message-ID: <c157cc$f2b17.5d@news.thepoint.net>
Source record: 209317

Everyone who's patiently waiting for Cycle 23 "The Big One" should read a report by the NOAA Space Environment Center (SEC) at http://www.sel.noaa.gov/ titled Solar Cycle 23 Project. The general concensus of the 12 scientists who prepared the report was that Cycle 23 will be pretty normal BUT there seems to be some concern that recent magnetic flux intensities at the sun's poles do not support a banner season. If so it may be the first time in many, many cycles that an odd-numbered cycle is less intense than it's even-numbered predecessor. Cycle 22 was a real whopper for an "even-numbered" cycle, and by that logic #23 should be the mother of all solar cycles! So what's up with the sun anyway? And why is it getting so cold around here? Let's see some SPOTS!

>given that so many people in the world use CW, it is a good idea to
>require U.S. hams to know it. Implicit in his argument is the HF long
>distance aspect. Hence my question.

And reread my reply above. OOK Morse operations for gaming purposes are
not of interest to me, nor are they apparently of interest to a rather
substantial group of other amateurs (ARRL surveys have shown that about
half of currently HF licensed amateurs don't *ever* use OOK Morse, and
by implication, don't participate in OOK Morse gaming activities).
So quoting high usage by gamers is irrelevant to those outside their
particular subculture.

Point to point HF data comms are an interest of mine, however, and
that isn't served by OOK Morse. Morse has essentially been abandoned
for traffic relay. HF data comms allow a low latency that isn't currently
possible with terrestrial VHF+ relay networks, and offer links which
terrestrial VHF+ cannot span. Data rates are modest under current

regulations, but that is often sufficient, and can be improved (in fact my current project is partially aimed at doing just that).

I don't believe there is any necessity for those not interested in gaming activities to have passed a receiving test in Morse. I see no real need to interoperate with gaming stations if one is not participating in their gaming activities. And it should be obvious that the gamers have their own incentive to master Morse, thus needing no formal testing either.

(In relation to the emergency comms argument raised by some, I'd note that first word of damage in the Caribbean during last season's hurricanes came via way of PACTOR, and that first word of Iraqi attrocities in Kuwait came via AMTOR. The image of OOK Morse as the emergency mode of choice has become just a romantic illusion based on the past, and on Hollywood imagery, not on current reality.)

>luxurious items, the relative numbers of such people are much lower.

As are the number of *amateurs* in those countries. The two sets are virtually identity sets. The indigent are rarely motivated to take up a technological activity unrelated to their survival needs. A rational person who is poor will spend his free time trying to better his lot rather than frittering it away in radio gaming activities. Only those who are relatively comfortable can afford to waste their free time on non-productive activities such as Dxing.

>Indeed, as I pointed out in my response (which you edited), even in
>other first world countries, digital equipment (and purchased radios)
>can be very expensive relative to their incomes, compared with this
>country.

Indeed, taxation is exorbitant in much of the first world, often taking most of the fruits of an individual's labor, and making the price of imported goods higher due to import levies. It is an outrage when government robs its people of their earnings. What is even more outrageous is that the majority tolerates it. Some do emigrate, others try to operate outside the regulated economy, but most others suffer silently under the yoke. Rather than Dx gaming, their time could be more productively spent reforming their governments.

Fortunately, the price of electronic technology has been rapidly falling in real income terms since the 1950s. Even in economically oppressed countries, modern electronics is cheaper today than at any time in the past in real income terms, IE allowing for inflation. This has allowed people of even modest means to acquire equipment with capabilities that their fathers could only dream of owning. The major reason for this is summed up in four letters, VLSI. This has given us incredible functionality at very low cost.

An example. In 1965, a Galaxy V Mk II, a low end HF mobile transceiver of the era, cost $495. In 1996 an Alinco DX70T has a street price of under $900. The two are roughly functionally equivalent, though the modern rig has many more features and is much smaller and consumes much less power. Naively, we would say that the new radio is more expensive, but that is not so in terms of real purchasing power.

Inflation has made the 1996 dollarette worth only 1/8th the 1965 dollar, so the Alinco really only costs $112.50 in equivalent 1965 dollar purchasing power. Or conversely, the Galaxy cost $3960 in 1996 equivalent dollarettes. Either way, the newer equipment is much cheaper in terms of manhours required to obtain it.

Now not everyone's income has kept pace with inflation over the years. On average, incomes have only risen 6x over the period (this is really a hidden tax on everyone's earnings caused by government fiscal policy), so the benefit of lower real costs hasn't been fully felt, but it is still substantially cheaper today than then to own adequate radio equipment.

And relevant to this post, the same thing applies in other nations. While there is still a disparity between their disposable incomes and US disposable incomes (because of their governments' policies and other factors), they too have seen a rise in their real purchasing power during the period with regard to electronic goods.

For the homebrewer, the situation is even better, *if he adopts modern techniques*. Because of the way import duties are calculated, the difference in cost between a discrete part and a VLSI part is practically moot in most countries. So it behooves the amateur in these countries to import the most advanced technology available in order to get maximum utility from their expenditures. It would appear that the more astute amateurs in these nations have realized this. The more advanced homebrew projects seem to be dominated by foreign amateurs. They appear to be adopting modern technology at a much more rapid pace than the average US amateur. I've certainly found this to be true in amateur data comms.

Finally, I would note that homebrewing with modern VLSI is much less demanding on amateur skills than building with discretes. This makes use of VLSI a better starting point for those just beginning to learn to construct homebrew equipment. By being able to work in terms of functional blocks, many of the tedious repetitive detail implementation issues can be safely ignored. This allows the beginner to concentrate on the overall functional purpose of the project and not to become mired in minutiae. The latter is why many projects are never finished. The homebrewer becomes overwhelmed by detail, and abandons the project.

A trivial example. One needn't know how to design an opamp in detail to use one in a project. One only needs to know its external transfer function. In the era of discretes, only an advanced homebrewer would tackle a project requiring an opamp, discrete realization was too daunting. But today even the neophyte builder can successfully design projects using several integrated circuit opamps. The same is even more true of the more densely integrated functional subsystem chips now available.

To advocate that neophytes start their homebrewing experience with discretes is doing them a disservice. Their first projects will be disappointingly primitive, and the skills they learn will often be less useful to them than if they had started with a top down functional approach to homebrewing. This top down approach is also absolutely vital to troubleshooting and repair. Being able to see the system in terms of functional blocks allows one to quickly and accurately localize a problem to a particular subsystem or IC. Then repair becomes a trivial matter of parts replacement even in the most complex piece of gear. Those whose skills are primarily at the most primitive discrete level become lost in the complexity of modern gear. Those with a functional understanding do not.

Thanks. You're right, the voltage and current nodes *both* are problem
areas. Because the lightning pulse spans so wide a frequency range,
however, these cannot be a priori located with certainty. So depending
on tuned lengths for protection is of little value.

>As you say, the bulk of the energy is down below 2Mhz. As I understand
>the whole deal, the more or less center frequency of the oscillation usually

>starts out much lower than 2Mhz, then rises as the time stretchs out until
>the path collapses when the energy to support it fails. Because it varies
>as widely as it does, chokes, coils of coax and even tuned stubs that have
>been tried as suppressors, all tend to offer more problems than they solve.

Yes, narrowly tuned systems offer little protecction. The highest
frequency components occur at the beginning to the pulse, however,
not later. They are inherent in the rapid risetime of the pulse.
(Remember your Fourier analysis, a pulse with a rapid risetime
has all the odd order harmonics of the fundamental present, and
the faster the risetime, the more dominant higher order terms
become.) Now some point in the circuit may flash over due to
resonance effects of these momentary very high energies, and
then the bulk of the discharge will follow that path (because
it has become a low impedance ionized channel).

>I don't know the math behind it, but in that the bulk of the energy is down
>below the 2Mhz point, it appears that is part of the answer to why there is

>coax down leads to the tower on the way down, unless the line run along the
>tower exceeds 175 feet or so in length. We are dealing with the roughly
>quarter wave current-voltage reversal in the major time-domain of the pulse
>at the heaviest part of the hit, as I see it.

No, this is not good advice. As I noted above, points of high impedance
in the path will have very large voltages expressed across them. These
become the *most* likely places for flashover to occur. We don't want
that. Flashover, or more precisely, sideflash, is undesirable because
it is a priori very difficult to predict. A properly designed lightning
mitigation system won't offer any opportunities for sideflash. It does
this by offering a low impedance shunt path to any point in the circuit
which might represent a high impedance to the surge.

There are two important reasons to bond the coax at the base of the
tower. The first is that it shunts the inductance of the tower in
such a way that the coax will have a lower potential on it, regardless
of length. And the second reason is that it shorts out the single turn
transformer formed by the tower and the coax. With several kiloamperes
flowing down the tower, a very large surge can be induced in even a one
turn transformer, and we don't want our coax to carry this over to
the equipment.

>
>Here, here. I don't know who said this, but I agree. Would it work to allow
>wider bandwidth signals on HF below something like 250 mw?

The parameter of interest would be dbm/Hz. A 250 mW signal is
often a respectable one on HF. If it represented an OOK modulated
carrier, it would average roughly 0 dbm/Hz at the transmitter,
though the spectrum wouldn't be flat. If it were a SS signal with
a dispersion of 250 kHz, it would have a power density of roughly
-30 dbm/Hz, or about 1 microwatt per Hertz at the transmitter,
and the spectrum would be flat. Throw in typical HF path losses,
and it would be at the limit of detection of most narrowband
amateur HF receivers, even under ideal HF conditions. So
narrowband operators would be unlikely to notice it. But
when the dispersion is collapsed by the SS receiver, the
respectable 250 mW signal is recovered.

The experiment I'm currently running (operating under current
narrowband rules) has a power spectral density of -3 dbm/Hz at
the transmitter on the "high power" setting. It has proven to
be fairly robust over 20m HF paths using simple coding and very
simple RF hardware. Contact has been established at -13 dbm/Hz
and -23 dbm/Hz as well, but throughput at the latter power level
is very low. CW operators don't seem to notice it at all, however.
Note the system uses no SS dispersion or collapse, so this represents
raw channel performance with pretty primitive equipment.

If an upper limit of 0 dbm/Hz were put on the transmitters of
moderately wideband (IE up to 3 kHz) data systems on HF, we
could certainly live with that if we stay near the MUF. With
full SS authority, we could live with -30 dbm/Hz transmitted
power on most of our HF bands, save perhaps 160m and 80m in
summer. That would take our signals completely out of the ears
of conventional narrowband operators.

But higher output powers would allow much higher throughput
of course. Current UHF SS rules, and the two STAs currently
in force, limit total output power to 100 watts. With that

much power on HF, we could offer throughput numbers of 1
Mbit/sec or greater using symbol overloading, but the dbm/Hz
output would be -4 dbm/Hz, and that might be noticed by
narrowband weak signal operators, IE a 0.01 mW "white noise"
signal on every frequency of the band. That is still 102 db
less power spectral density than a Dx pileup commonly generates,
however. Hence the common fear that Dxers will "burn out"
the band. :-)

Sounds like you have some experience in the medical or mental health
field???

I worked as a MH counselor for several years, uaually in non-medical
settings but occasionally in medical setting.

I finally left & am now in a completely different profession. Far less
stress, far less burnout. :) But less money too. :(

I agree with you in principle ... those people who have no interest in
radio technology (the "art" in "radio art", NOT CW, which is simply
telegraphy, which has existed for far longer than radio) don't deserve
to be hams ... even if they can copy 20+wpm of Morse code.

However, having a Morse code test has NOTHING to do with the radio art
.. read the ITU definition of ham radio ... it's a service devoted to
private tecnical investigations ... NOT a "gaming place for people who
want to yack, beep, and 'chase DX'" ... those things are permissable,
but they are NOT the "reason for being" of ham radio.

Yea, I wonder why Dich Kendrick & Eric Oyen keep wanting to keep this
situation stirred up. You notice just within the last 24 hours Dick has
posted FOUR responses from me to messages within this thread that were
not directed or involveing him in any way?

You have brought up an excelent point Bill.

Do what everyone else who gets an amateur radio license today does:

Buy a Gorden West study guide and just memorize the questions and
answers.

Its quick. Its easy. And most of all, nobody knows the difference.

Why waste time and effort learning all that useless theory and
electronics when all you want to do is yack on the radio. Memorize
a question pool near you today.

>> what the regulators had/have in mind when they wrote/read 97.1 ...
>
>Now you are starting on the "they knew best" track :-)

I think they did, but I don't think that most of today's hams have an
inkling of an idea what the real purpose, raison d'etre of ham radio was
in the eyes of the regulators and the early hams ... it's been perverted

from a technical investigation/invention service with some public service and hobby-like aspects to something that's "just a hobby for yackers and gamers" ... that's bad/wrong/sick/twisted ... that needs to be fixed if ham radio is to continue to survive ...

>It is interesting that some of the fundamentals of the amateur
>regulation
>are similar, but in the detail, there are wide variations in the
>legislaion
>enabling amateur radio in different countries. For example, the
>underlying
>rational in the US is for emergency communicatione, in the UK it is
>"self training" in radio technology and techniques. Who says 97.1 is
>right ?

My reading of both the ITU regs and 97.1 says "self-training in radio technology ... maintain a pool of trained technicians and electronics experts" etc ... I don't see anywhere in there where it says anything like "build the best corps ob big-gun DX stations in the world" or "score the highert in the CW-WW Sweepstakes contest"

[snipped the 3 class proposal]

I think 2 classes should be sufficient, beginner and regular ... (like apprentice and journeyman) ... neither would require code, both would convey HF privs ... perhaps more for the regular/journeyman ... though I remain unconvinced that there is a valid reason to keep any technically qualified person from anything ...

>This sort of scheme wouldn't shut anyone out of anything based upon
>anything
>other than *relevant* knowlege. The basic class tests would be similar
>to
>todays general. Technician class similar to advanced/extra. Experimental
>would require a test beyond anything in the amateur testing today -
>maybe
>similar to the commercial license tests (I don't know, I have never seen
>one).
>
>Phil

Again, I fail to see any valid reason to keep anyone out of anything if they're qualified ... that's ALL a license exam should be for ... to determine that one meets some standard of qualification ...

>
> <mackeycheeks@myself.com>

We CAUGHT Kevin Potter making false postings!!!! He started sending messages & making news group posting under the name "mackeycheeks@myself.com". Using the header & router info on messages, see where they are EXACTLY the same except for his fruitless attempt to hide by changing his user name & reply info.

From: Kevin Potter <k5vp@west.net>
Newsgroups: rec.radio.amateur.misc
Subject: Re: All Hail King Mackey the Great
Date: 20 Dec 1996 17:28:19 GMT
Organization: Earthlink Network, Inc.
NNTP-Posting-Host: max5-so-ca-48.earthlink.net
X-Mailer: Mozilla 1.12(Macintosh; I; 68K)

From: <mackeycheeks@myself.com>
Newsgroups: rec.radio.amateur.misc
Subject: Re: All Hail King Mackey the Great
Date: 20 Dec 1996 18:07:39 GMT
Organization: Earthlink Network, Inc.
NNTP-Posting-Host: max5-so-ca-48.earthlink.net
X-Mailer: Mozilla 1.12(Macintosh; I; 68K)

Notice the "NNTP-Posting-Host", "X-Mailer", and the "Organization" lines are exactly the same. These line are not possible to change. Especially the posting host. It is assigned by Earthlink when you dial in. BUT, in order to prove that it is not just some coincidence that someone else came on from the SAME provider/organization (earthlink) & the same posting host read the following.

The "X-Mailer" is listed as:
"Mozilla 1.12 (Macintosh;I; 68K). This is very uncommon as this means the poster was using Netscape version 1.12 for a MAC. According to

Netscape support, this in now an obsolete version of Netscape & has not been distributed by them for quite some time.

The from line is EASY to change, as Kevin Potter has demonstrated.

Shame on you Kevin.

4259. ICOM Computer Control Software?

Notice that Dicky-boy's sig file says that there is a fault in
reality. Maybe that is his trouble & why he makes up all these
stories. Maybe HE is the one on Ritalin & Lithium? This would
explain his problem with reality!

Reed is 100% correct, Dicky-boy started this with his little story
he posted. Before that, everything was fine. Then Eric jumped
in to help. Perhaps they are a team?

Or maybe - they are the same person?

Guys,
I don't know what this is all about, nor do I care. If you have a problem with each other could you please take it to private e-mail? you are both looking like a couple CB'ers that are mad because one of you used the others "private channel". This is getting pretty annoying to have the group clutterred with 10-12 messages a day for this bs.

Thanks,
Dave

You do seem to be the type who does not like to accept responsibility
for their own actions. I notice you now want to try to make up
a new story about about group therapy to attempt to take the spot
light off of your intent to cause trouble.

> Dicky-boy CET N7NT (ex WA7TWI) |
> Amateur Radio Extra Class | Do not adjust your mind, there

> 4) Name the movie.

Well, that could have been several movies. In 'Raiders of The Lost Ark', David Reis (Lenny) played Rene Belloq. In 'Indiana Jones', he played Mola Ram. But both Lenny and Squiggy have been in a number of movies.

I understand the current day counterparts will be staring in a movie also entitled 'WARC 99 - Lenny and Squiggy Don't Go To HF'.

>Jeff KH2PZ
>
>

Why is it not a grave loss. Incidentally, it's possible to work much of the U.S. on 2 meters, and all of it on 6 meters, a feat which some can't duplicate on 80/75 meters either. Amateur radio with a modicum of sense and proper positioning could easily set up a set of microwave relays for passing NTS traffic faster, and voice and packet traffic as a side measure. Just imagine instead of the internet, using a 440 or higher rig to pass your traffic digitally encoded. If you think that the people capable of doing that aren't as technically competent as someone who can build a tube transmitter for 80 & 40, you're wrong. In some ways, they're even more into experimentation than the people who built gear on the useless frequencies above 200 meters earlier in the century. The most used band in this country, 2 meters, was thought of as a junk band 40 years ago, and even .9 MHz on HF can't handle as many amateur QSO's as let's say 440 MHz can. Aren't you ignoring the future because you LIKE HF more than other bands? I don't see a lot of experimentation on HF anymore. A few hams will try pactor II, then it's a commercial product that most hams can't duplicate if just because there's intellectual property law involved in creating the method of communicating.

I also wonder how many people could take a television with only a damaged picture tube and get on 80 meters? I could, and I wouldn't even worry about being out of band either. Many of the people working CW and bemoaning the lack of technical knowledge of no-code hams can't do so. It's so simple, it's not funny, but they can't do it. Amateur radio is supposed to be for experimentation, and frankly HF isn't producing a lot of experimentation presently. There are a few hams with propagation beacons running around the world, but note how few there really are. CW, AM and SSB are really now old tech, and digital HF communications is rapidly becoming something that you have to pay money to use the new method of, not something you can scrounge together. You can't scrounge GTOR or PACTOR.

I'm also aware of the coherent CW experiments that were going on, but as far as I can tell there were not all that many amateurs interested. Where's the technical envelope that you're advocating, or are you just advocating more of the same stuff that hams were doing 40 years ago?

Another minor negative aspect of the Azden 6m handheld is that it has no low battery warning, unlike almost all other modern HTs.

I bought my AZ-61 HT for a mere 100 bucks from someone who got tired of its battery going dead and dumping all the memories. In the two years that I've owned it, I've only had one memory dump, however.

Yes, its programming is indeed strange, but there are no other 6 meter HTs on the market.

Source record: 209418

Peter Laws asked how Skywarn could perform county-wide comms on HF if
all of V/UHF was lost to auction:

Peter, local mobile comms have been performed on HF since the 30s.
If you don't mind the antennas on your bumper, 160 and 80m both
work fine for local groundwave comms; and you don't need to depend
on someone else's radio (i.e., a repeater) to work the other fellow(s).
Very efficient county- and state-wide civil defense nets were in operation
on HF for many many decades.

Please, study some of the history of amateur radio; you'll surely be
fascinated by what has transpired in its 80-year duration.

73 from Nevada,
Jeff KH2PZ / 7

So when the signal fades, you can turn up the power to maintain a
reasonable s/n ratio ... but running the legal limit at 60+over is
against the rules, but routinely done ... as I said.

>

>
>Tom,
>N8ECW
>

Well, as Gary has pointed out, the ITU regulations define ham radio as a
service for the pursuit of technical experimentation and self-education
(perhaps more eloquently than our own FCC rules, though my reading of
Part 97 clearly gives the same impression) ...

And there are LOTs of "art" things that are, bu any *reasonable,
rational* definition garbage ... for example the controversy a while

back about the guy who got a (rather substantial) grant from the National Endowment for the Arts for his "art" ... which consisted of a plastic dashboard Jesus in a bottle of piss ... sorry, but I don't think any *REASONABLE* definition of "art" could encompass that ...

Scott:
Volumes have been written in Nicads and everyone seems
to have his
pet theory. Well, before I retired I worked for many years at a TV station
and the News
dept used a great number of Nicads in the lights, the recorders and
cameras.
One fellow tried for about 10 years to salvage and extend the life of the
Nicads. They
were charged slow, fast, pulsed , zaped, completely discharged, partially
discharged
and all the combinations in between. He spend hours taking the paks apart
and
matching the cells. After all this, the conclusion was drawn that there is
no good way
of salvaging Nicads. They have a life of 2 to 3 years whether you use them
or not.
Heavy use or light use makes no difference. After they start failing just
discard them.
It is not worth the frustration to try for a little extra life, only to
have them fail when you need them. They do degrade with age and there is
nothing you can do about this. It is
the chemistry of the cell.

_/ _/_/ _/_/ _/ _/ _/ _/ _/
_/ _/ _/ _/_/_/ _/ _/ _/ _/
-
Here is a summary of news items covered on edition #195 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 27-Dec:
-
1. Packet Listings Deleted from 1997-98 ARRL Repeater Directory
2. Launch of Phase 3-D Delayed by Postponement of ESA Ariane 502
3. Heard Island DXpedition Receives $1000.00 ARRL Colvin Grant
4. ARRL Committee Report Favors Retaining HF CW Requirement
5. "The RAIN Dial-up" from Chicago
6. FCC Reduces Vanity Call Sign Backlog to Three Weeks
7. Vice Director of ARRL Great Lakes Division Resigns
8. Weekly Propagation Forecast
9. League Opens Nominations for Hiram Percy Maxim Memorial Award
10. "This Week" Seeking Special Feature Producers/Commentators
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. Special Event Station Calendar
13. W1BCG Special Event Works 800 Stations on 160 Plus 1000 Others
14. Season's Greetings from All of Us at "This Week"
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" was been made possible by a grant
from Don and Karen Rice, N0BVE and N0EST, of Minnetonka, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
```

"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

>CW ops are the most polite hams around, always willing to lend a hand, or
>work other ops. If someone sends too fast for you, tell them to QRS.
>Congrats on the upgrade, OM.
>

If you transmit at a really slow speed on the extra portion of the CW
bands, most people will just figure you're working JA. I've had a bunch
of these QSO's where the JA sends really fast. I get nothing back until
I slow down my code speed to like 5wpm or something.

: only way you are going to work dx is to learn 13 wpm code. And if you

This is false. It is easily possible to work DX to China, or any other country, using 5 wpm CW on the Novice segments of the bands.

Of course, you cannot use SSB, except for the segment on 10 meters, but I have found CW conversations to be much more interesting than the gabbing that happens with voice.

>mutually respectful of each others' committment to the hobby.

We don't have a sense of community about the CW requirement. Far from it.
It is a source of division instead. Ever since "incentive" licensing
came into effect ham radio in the USA has been divided in this way.
Do away with the tests and we'll do away with a lot of division.
Plenty of new hams and not-so-new ones will still discover CW,
and they may like it better for not being force-fed it.

: something phone op on 3.720 about a week ago raising all sorts of noise about US
: novices operating in "his" phone segment.

Hm. You would think the VE would be a bit more knowledgeable. CW is allowed on
ALL Amateur frequencies (at least, on HF). I don't know if that is true for
Canada as well, but suspect it is.

The Canadian allocations used to be identical to those in the US, but may not
be any longer.

: Sorry Don, I believe you are incorrect. The beeps were used by NASA long before CB'ers were attracted
: to them. I used to use one on SSB all the time and might build another one to do it again!

Correct.

: If I'm not mistaken, RCI or UNIDEN have implemented the BEEP into their 10M rigs.

The only reason RCI and UNIDEN put them there was for the CBers, who use these rigs on 11 Meters, as well as both above and below that band. They can get "chip sets" (and sometimes even simpler modifications) that allow transmission from about 26 MHz to 30+ MHz. They did NOT design those rigs for Hams.

From: Free Money <money@money.com>
Message-ID: <32BBAEE5.307C@money.com>
Source record: 209431

This is the fairest, most honest way I have seen to share in the wealth of the world.!

Take five minutes to read this and it WILL change your life. If you want to know how to make thousands of dollars quickly, legally, and with NO CATCH, then keep reading.

The Internet has grown tremendously. It doubles in size every 4 months. Think about it. You see those 'Make Money Fast' posts more and more. That's ... because it WORKS ! So I thought, all those new users might make it work. And I decided to try it out, a few months ago. Besides, what's $5.00, I spend more than that in the morning on my way to work on coffee and cigs for the day. So I sent in my money and posted. Everyone was calling it a scam, but there are SO many new users from AOL, Netcom, etc. they will join in and make it work for you.

Well, two weeks later, I began receiving bucks in the mail! I couldn't believe it! Not just a little, I mean big bucks! At first only a few hundred dollars, then a week later, a couple of thousand, then BOOM. By the end of the fourth week, I had received nearly $47,000.00. It came from all over the world. And every bit of it perfectly legal and on the up and up. I've been able to pay off all my bills and still had enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well. Markus Valppu says he made $57,883 in four weeks. Dave Manning claims he made $53,664 in the same amount of time. Dan Shepstone says it was only $17,000 for him. Do I know these folks? No, but when I read how they say they did it, it made sense to me. Enough sense that I'm taking a similar chance with $5 of my own bucks. Not a big chance, I admit--but one with incredible potential, because $5 is all anyone ever invests in this system. Period. That's all Markus, Dave, or Dan invested, yet their $5 netted them tens of thousands of dollars each, in a safe, legal, completely legitimate way. Here's how it works in 3 easy steps:

STEP 1.
Invest your $5 by writing your name and address on five separate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST." (In this way, you're not just sending a dollar to someone; you're paying for a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1. Michael Barratt - 27 Park Ave. - Poughkeepsie, NY 12603

2. Brian Truter - 101 N. Park Avenue - Springfield, IL 62702

3. J. Campbell - 1040 C Winners Circle - Bowling Green, KY 42104

4. Joost Walter - P.O. Box 259 - 2870-AG Schoonhoven The Netherlands

5. S. Thomas - P.O. Box 4945 - Tampa, FL 33677-4945

STEP 2.
Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so on. Put your name in as the fifth one on the list.

STEP 3.
Post the article to at least 250 newsgroups. There are at least 19000 newsgroups at any given moment in time. Try posting to as many newsgroups as you can. Remember the more groups you post to, the more people will see your article and send you cash!

STEP 4.
You are now in business for yourself, and should start seeing returns within 7 to 14 days! Remember, the Internet is new and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back 5 responses. Yes, that's right, only 5. You make $5.00 in cash, not checks or money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 250 additional postings with your name at #4, 1000 postings. On average then, 50 people will send you $1.00 with your name at #4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your name at #3 or 10,000 postings. Average return, 500 people= $500.

They make 250 postings each with your name at #2= 100,000 postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at #1 and you get a return of $60,000 before your name drops off the list. And that's only if everyone down the line makes only 250 postings each! Your total income for this one cycle is $55,000.

>From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through and repost this article everywhere you can think of. The more postings you make, the more cash ends up in your mailbox. It's too easy and too cheap to pass up!!!

So that's it. Pretty simple sounding stuff, huh? But believe me, it works. There are millions of people surfing the net every day, all day, all over the world. And 100,000 new people get on the net every day. You know that, you've seen the stories in the paper. So, my friend, read and follow the simple instructions and play fair. That's the key, and that's all there is to it. Print this out right now so you can refer back to

this article easily. Try to keep an eye on all the postings you made to make sure everyone is playing fairly. You know where your name should be.

If you're really not sure or still think this can't be for real, then don't do it. But please print this article and pass it along to someone you know who really needs the bucks, and see what happens.

REMEMBER....HONESTY IS THE BEST POLICY. YOU DON'T NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS! GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages with your name in the list and not sending the bucks to the people already included, you will not get much. I know someone who did this and only got about $150 (and that's after two months). Then he sent the 5 bills, people added him to their lists, and in 4-5 weeks he had over $10,000!

>the current at 240 V than 120 V, it's less likely to kill you. But this
>was someone from Britain arguing this. Does anyone know for sure?
>
> Dave
>
I've heard this too, but I read it in an article. It's probably correct.
But I've also heard that 240 V is safer than 120 V, because the current is
less, not greater. This is because the load stays the same. Also, it's
the current that kills, not the voltage.

Roger:
Iknow that you and I get along About as well as a Dragonrider battling Thread, But I agree with you 1000 percent on how shabbily our ELMERS are being treated by this Hi-tech addicted generation. most of these gripers wouldn't know an ohm from a watt if it came up and bit them on the ass. Even with my limited intellect, I treat ANY elmer with the upmost respect and reverence, as I know that these guys have forgotten more about ham radio than I could ever hope to remember. Hell, I even consider YOU an elmer. We may disagree on agreat many things, but I'm just a babe in the woods here, with my humble,two month old Hamster licence.But even a dummy like me knows that you don't treat ELMERS like caca.They are indeed Ham radio's living tresure trove,and should be treated as such.

Of course this argument will never be resolved...there are strong points on either side of the issue, and you appear to approach the situation as alot of folks do, without looking at what has made Amateur Radio work besides part 97.

Unfortunately, the rules and regulations the FCC set up regarding the Amateur Radio Service do not really address what keeps the service working, what keeps people coming back to the hobby. That's where things depart from the neat world of rules and regulations or even pure logic.

People like to belong to something special. We like to identify with groups. We are attracted to the notion of community. And what is particularly interesting is that people who share a common background that may have involved some hardship, some fun, some challenge etc. tend to be proud of their "heritage". You see this all over the place in Alumni organizations, VFW groups, etc. It is that collection of experience that helps glue the Amateur Radio Service together and make it something special....not just a collection of rules and regulations that we can use to stake our claim to spectrum space with. It is community.

As we slowly take away the significant things from Amateur Radio that create a sense of shared identity, a sense of community (like the CW requirement, or homebrewing equipment), we start to lose those things that keep us "bonded", that keep us comiserating (!), that keep us mutually respectful of each others' committment to the hobby.

Replace that experience with a 610 form, a few bucks, and the published answers to a simple quiz and your community goes away forever and is replaced with a reasonable facsimile of CB in the 70's. I for one loathe a future like that for amateur radio. Make room for tradition; value is there, intended or not.

As one with clearly too much time on my hands I pulled out my treasured
1931 Handbook (close enough?) and counted 15 parts in the basic 2-tube
regen, and 26 in the MOPA transmitter. Add a handful for RX batteries
and TX power supply and you're at 50 or more.

(I'm just glad Jim didn't claim there were only 4 parts in a '50s
vintage color TV...that would have shot my whole holiday!)

Because after you let them have the ones that you are not using, the end
up taking the ones that you are using.

Second, just because we don't need them now, doesn't mean we won't need
them in the future.

Learn from other groups that thought they were being reasonable when
relinquishing (sp?) their rights. "This little loss doesn't mean
anything. We can live with it." But they keep coming and taking more and
more. It never ends. Give your foe a yard and they keep coming for miles
until you have nothing left.

> The advantage of 220 is that with less current flow there is less loss for
> the same distance travelled down the wires. The advantage of 110 is that if
> you come across it you can survive, 220 is more likely to zang you.

WRONG ... You forgot to figure in the muscular reaction to electrictiy.
With voltages above 80 Volts (some literature says, the threshold was 100
Volts), a kind of jerk back reaction (muscle contraction) results from the
touch. At 220 the jerk back reaction is much more pronounced and comes
swifter than at 110. It thus is safer to come into contact with 220 Volts
than with 110 Volts. Actually, with some people 110 Volts do not trigger
any reaction. But 220 will never fail in doing so.

The body is just another power consumer. Voltage is one thing, the body
resistance another, but veeeeeeery important is the time of exposure. A
few millisecond at 220 Volts are less harmful than three seconds at 110.
Time of exposure is a pivotal factor in all that, too.

As a kid I got zapped a few times by 220 Volts. I wonder if I had lived
another 40 years to tell about it, if those wires had carried 110 Volts.

But I nevertheless would not recommend to anyone to try it out.
Everything above 45 Volts can be potentially fatal when coming with the
capability to pump enough amperes through you. Actually it does not
take that much amperes to add-on a halo on you ...

Dear friends,

My AEA DSP 2232 doesn't work right.
I'm getting on the little screen of the TNC the following,
Packet
Packet
and both lights DCD and CMD are on.

On the screen of the computer appears the following message when I
communicate with the TNC,

cmd: 3d: DSP software load failed and sometimes
cmd: 2e: DSP software load failed.

I dont know if the Microchip Motorola 56001zl20 is doing wrong or some
statics on it or other.
I can communicate and change modems, etc without any problem.
How can I solve this problem..
AEA they say is in process of closing, so they can not help me.
Please some one do it. If you have service maunal check the error
messages and answer me.
Awaiting your kind comments, have my best.

Hi all,

My nephew has been trying to learn enough electronics and code for over a year to get his license - without any luck. Seems he's one of the few people who has trouble with the theory, rather than the code. He just can't seem to grasp it the principals of electronics...

Was wondering if anyone has had any experience with the video training courses for an amateur radio license offered by the ARRL?

I would like to purchase the courses from someone who has used them and wants to re-coup some of their investment. I would like to get him (both) the tech and general license courses - in good condition of course.

Any help/information is appreciated. E-mail please.

John

For Sale:

I have a Icom IC-736 for sale. I bought it New October
28, 1996. This rig is as new, has maby 2 hrs use.

The IC-736 is a general coverage transceiver from 30 KC
to 30 MHz, Also has 6 meters. 100 Watts out on All-Bands.
Has built-in Antenna Tunner and 110-Volt Power Supply.
Runs 100% duty-cycle. It is All-Mode, SSB, AM, FM, & CW.
I have shipping box, power cord, hand mic and book.

I paid $1700.00 for it but will sell for $1450.00

Thanks,

Actually it would be pretty hard to get into 240v as we are talking about
2 120v circuts out of phase to make 240v (not that it couldnt be done).

Higher voltages find "ground" better, thats the differance.

I'm reduced to reading the newsgroup via an email digest for a few weeks so replies to all your thoughtful comments will be a bit awkward; one receives a 20kb email with all articles attached. You have to page down many many times to get past the loooong articles that you'd normally skip (Dave Horsfall: Why not send your bulletins to rec.radio.info?).

It pains me to do this but I must thank Brian Kantor @ UCSD for setting up this digest for us folks without full internet access.

Now, to James Kelley who says a 1928 amateur radio station only has 4-5 components, I suggest you scurry off to your closest university library and peruse the radio books collection. By '28, there were fairly sophisticated circuits folks were building; they contained as many components as the designer wished to include. By '28, radio-telephone (AM phone) was in use (and broadcast stations were transmitting to an ever growing audience). I've never seen any AM transmitter-receiver with 4-5 components from any era!

Re: 3894.5 kHz Nut Control - I received several unwelcome and unsolicited emails from that kook so I had not way of knowing "... it was a joke." But a followup mentioned "CW is supposed to be a lid filter." No, I've never made such a claim; in fact, that we've even got lids on HF who've passed the code exams just shows anyone with normal capacities can learn code.

Re: NTIA's recommendation of awarding 900kHz to HF hams:
Someone's followup falsely claimed that as little as 40 years ago 2m was thought of as useless. Oh, you couldn't be more wrong! Just pick up the 1956 or 57 ARRL Handbooks and look all the VHF circuits. Or glance through issues of QST covering that era. There was a wealth of 6 and 2m work being done. And of course, Art Gentry (W6MEP, SK) had just erected the K6MYK 2m AM repeater atop Mount Lee in the Hollywood Hills. My 1950 ARRL Handbook shows *commercially made* transmitters and receivers for 6 and 2m being advertised. Besides the 6 and 2m circuits in that edition, there is even circuits for 220 MHz. That's 47 years ago.

And to Gary, yes, Continental Morse is International Morse; I did mean Landline (or American) Morse. (That's actually the first mistake I've ever made!)

73 from snow-covered Lake Tahoe,
Jeff KH2PZ / 7

P.S. I promise never again to give a winter Hawaii WX report in order to tease you folks - this is miserable.

Ah, I get to disagree with you, here, Michael.

Can't speak to the HF rig, but I've had pretty good luck with the two VHF/UHF Alinco rigs I've owned over the last 3-4 years. The DR-1200 I have has been in continuous tcpip packet operation, 24-hours a day for almost 4 years, through thunderstorms and such, with only dial backlight failure (a common problem with the 1200. I will admit), which I just fixed with $1.49 worth of bulbs (2) from Radio Shack. And their DR-570T dual-bander has been in my 1988 Acura Integra for almost as long, with nary a problem. I had to open both rigs to either expand reception , or fix the dial backlights (or both), and they are neither better nor worse than anything else I've seen. Their tech support seems reponsive enough, and from what I've read up on the newsgroups, their HF mobile has gotten rave reviews (except for its noise blanker--oh well). It is a LOT less expensive than the ICOM, I might add, and there are deals out there on the early version that are pretty tasty.

I'd like to hear specifics from your Alinco-unfriendly service buddy before I'd shun their equipment.

Do you ever get on 75 meters?

Happy Holidays.

Well I found the problem. Half my dipole was down and draped over the back part of the house and resting against the aluminum gutters. I spent an hour yesterday pounding two 8 foot grounding rods into the ground trying to solve the problem but not in vain - I needed a better ground for the shack anyway. Thanks to all that responded.

These are nice, but they don't get you on the air. I don't think that
you and Jeff are in disagreement, merely that Jeff believes a CW
box is easier to build as your first device to get on the air. You're
probably not going to build a 10 meter FM box as your first project.

>Thanks, in advance.

>Donald

My JRC NRD-525 receiver runs circles around my Yeasu FT-840 tranceiver when it comes to listening to the AM Shortwave Broadcast bands but the Yaesu outperforms the JRC when it comes to monitoring CW and SSB ham transmissions. I purchased my receiver long before I had any intentions of getting into ham radio but I think if I were going to spend alot of money on a radio and was certain that I was going to get involved with ham radio, I would buy a transceiver with general coverage receive capability (almost all modern transceivers are general coverage on the receive) and a wide AM filter installed. Of course, you're talking more money for the transceiver than the receiver.

Hope you find what you want. SWL and ham radio are great hobbies.

That's about the most elitist statement I've ever heard. What you're saying is
that people who simply want to be hams because they think it would be an
enjoyable hobby or pastime don't deserve to be hams.

>However, having a Morse code test has NOTHING to do with the radio art
>.. read the ITU definition of ham radio ... it's a service devoted to

I am currently working on a proposal to present to my club, the North Hills Radio Club, here in Sacramento Ca. Recently QST provided an article on a internet to repeater link. I am hoping to get the club involved with experimenting with this idea. Hopefully we can sked with distant clubs or groups to link the repeaters over the internet. This would allow distant mobile units or base units to communicate across distance and or bands. I think it'll be a kick. I also think the club will be interested shortly in hearing from interested partys. If your inclined, I'll follow up here.

> Arrrgh! Doesn't *anyone* understand Ohm's Law anymore?
>
> I = E/R
>
> If I double the voltage E to 2E while leaving R the same,
> what happens to I?

It doubles, but the damage actually is done by the time you are subjected to the higher current. At 220 Volts, your arm's and hand's muscles instanteously contract, resulting in a jerk-back move .... a few millisendonds. At 110 Volts you might get less current, but as the jerk-back is less pronounced, you are subjected to a longer time, and in effect have to dissipate more power.

> What happens is that "I" get fried twice as extra crispy.

Nonsense, see your remark about Ohm's law. If your conclusion about E and R would hold true, you would get fried each warm, dry summer day when combing your hair ... the E of the static you generate is in the tens of kilovolts region... Currents, that can be fatal, if sustained over a finite time, need not be so if sustained only for a tiny fraction of the fatal exposure time.

But with respect to ...

> Gary Coffman KE4ZV
> Destructive Testing Systems

... telling you this is like carrying wood into the forest.

In destructive testing, you should encountered the effect of time on overloading a system... Neither 110V nor 220V are harmless, but when factoring in the jerkback reflex, 220 Volts is less harmful. If it were different, I would not be around anymore to tell.

>but they are NOT the "reason for being" of ham radio.

Carl, do you think that everyone who has conversations, uses morse code,
and chases DX has no business in this hobby? Many amateurs are not as narrowly
focused on the "radio art" as you. It is an important part of amateur radio,
but not the only reason to be involved in the hobby. People have hobbies
because they enjoy them. I enjoy CW, DXing, Contests, AND experimentation.
Because I enjoy other aspects of amateur radio, does that mean I am NOT
a real ham? Should I not use my radio equipment unless I am performing
some sort of technical investigation? I think not! I happen to be an EE
and I KNOW how my radio works, and I will use it for any of the previously
mentioned activities as I choose. If these activities are so wrong, the FCC
would have stopped people from doing them a long time ago (when they actually
had some authority).
I support the no-code technician license, and I support the code test for
HF, although I feel 5wpm is enough for a general class license. Don't get me
wrong, I think advancing the state of the art of amateur radio is necessary.
I've worked with spread spectrum, and with high speed digital modems and
beleive that's where the future lies. But, instead of bashing everyone who
does not agree with you, why don't you start introducing some of your ideas
and techniques to the people on USENET, instead of telling everybody who
does not operate in a manner you deem unsuitable that they do not belong in
amateur radio. Let people enjoy the "magic" if they want to. Have a happy
holiday.

Where have all the sunspots gone?

KUBILAI (kubilai@aol.com) wrote:
: I'm sorry if this is a little out of this group's realm but can anybody
: recommend a good study guide for the General Radiotelephone Operator's
: License? I saw a web page from WPT Publications and it seemed promising
: but I was wondering if anyone had any experience with them. I bought a
: study guide from NARTE and it was barely more than the question pool.
: Thanks in advance,
: Charles Phillips

I recommend "Basic Electronic Communications for the FCC General Radiotelephone Operator's License Exam" (whew!) by Victor F.C. Veley. Publisher is TAB Books; ISBN 0-8306-2580-1. My copy has a 1993 copyright date, thus is not entirely in sync with the current question pool, which was revised this year.

Elements 1, 3 and 8 are covered, all with lots of theory, beginning with DC circuit theory. I chose this book because I want to *learn* (actually, review, since I've been away from radar maintenance since the late 70s) as opposed to memorizing the correct answers.

Do you mean the "GROL Plus" book by Fred Maia and Gordon West? If so, yes, it's pretty much just the questions and answers in the pool, plus a brief explanation of why the answer is correct. I won't say it's a bad book, just not what I'm looking for, nor, probably, are you. For someone who knows electronics fairly well, it would be a good review for the exam(s).

I assume that you've visited the W5YI Web page at

http://www.w5yi.org

where test prep materials are offered for sale?

Good luck and 73 de Jim - KF6CR

Eric Oyen (n7zzt@goodnet.com) wrote:
: I too also agree with dave. I have some reservations about the ARRL,
: though. It is my impression that they don't listen much to the largest
: growing population in amateur radio: the Technician no-coder.
: Unfortunately, because of this lack of attention, the arrl suffers. If
: they would pay a little more attention to our concerns, they would be a
: much better organization for it.

There's a cyclic cause-and-effect relationship here. Few no-code
Technicians ever bother to join the ARRL, thus the ARRL does not address
their concerns. Around and around.

The growth is a meaningless statistic without membership. The League runs
like a
business; representing the interests of the majority of *members* is good
business. If most new hams joined ARRL and made some noise, you bet you'd
get more attention.

Yes, there is a ringing effect with any system resonance. The magnitude
and duration is a function of the Q of the particular resonator. Barring
cavity resonators, however, most things in the antenna system have a
moderate to low Q. This is a *serious* problem with cavity resonators,
and they need special attention in a mitigation design. And it is where
folks like Alpha-Delta and Lynics fall down in suppressor design.

>>The highest frequency components occur at the beginning to the pulse,
>>however, not later. They are inherent in the rapid risetime of the pulse.

>collapsing plasma segmentation that was thought to produce the rise in
>the average frequency at the end of the stroke as it dies out.

Yeah, I'm aware of that. However that effect is mostly of interest
when you are monitoring a distant stroke. Its relevance to what
happens to a struck tower or other structure is about equivalent
to worrying about what frequency the exciter was on when the PA
arced over. In other words, the frequencies the tower structure
sees are completely dominated by the pulse shape of the proximate
impulse. That lasts about 2 uS, so oscillations further up the
bolt don't have a chance to propagate to the tower in any event.

>>There are two important reasons to bond the coax at the base of the
>>tower. The first is that it shunts the inductance of the tower in

>>the equipment.
>
>I think I mis-implied this. I was thinking more about the practice that I
>have seen done where the coax is bonded over and over again to the side of
>the tower on the way down, not at the bottom.

Ah, understood. I don't believe such bonding does any harm, but it
doesn't do much good on a short tower either. Rigid line gets tied
to the tower by its hangers every 20 feet, making a DC connection.
I haven't any evidence that causes problems.

More like a pile of shit's worth.........

Are you stupid or do you just act that way? Freedom of speech does
NOT even pretend to extend to FidoNet echoes. By definition, and
by Policy, Fido echoes are moderated and rules are required, and
users have to obey the rules. Or else...... Very simple.

The Internet is an anarchy....no rules. So live it up, if you can,
shit-fer-brains! Just don't fart. You might blow yer goddamn brains
out.

==========

If you haven't decided who is out of line here.. I hope this
helps.

Later..

4357. Re: Canadian allocations

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-22 00:00:00 UTC
From: bb840@scn.org
Message-ID: <E2u8DD.F11@scn.org>
Source record: 209289

In a previous article, billn@PEAK.ORG (Bill Nelson) says:
>
>Dave Hockaday (wb4iuy@ipass.net) wrote:
>
>: Hi Bill. What is the Canadian phone allocation for the 80 meter band? There was a VE
>: something phone op on 3.720 about a week ago raising all sorts of noise about US
>: novices operating in "his" phone segment.
>
>Hm. You would think the VE would be a bit more knowledgeable. CW is allowed on
>ALL Amateur frequencies (at least, on HF). I don't know if that is true for
>Canada as well, but suspect it is.
>
>The Canadian allocations used to be identical to those in the US, but may not
>be any longer.
>
>Bill
>
I believe the Canadian phone allocation has extended into the US novice
80 meter band for at least 20 years (when I got my novice ticket).

>they would pay a little more attention to our concerns, they would be a
>much better organization for it.

I agree. The answer is for that "largest growing population" to flex its collective muscle by joining the ARRL and electing Directors who pledge to support their needs and desires. Again, change from within an organization is much easier than from without.

HELP!!

Does anyone know how to reset the 51R Power-up settings to the factory settings. I was playing around with the settings after downloading a message about them and I screwed up my squelch settings to the point that nothing unsquelches the rig. I'm trying not to have to reset the entire rig because I have the memory full and I don't have the software to back it up to a computer.

Thanks in advance.

N3XCM - Mark

Me too. I just can't stay awake thru most of them.

> He writes in an intelligent and courtious manner.

OK. If you say so.

> His explanations have helped me tremendously.

That's good. Then you probably have the most efficient tower grounding system in

North America. I prefer to throw the coax out the window......

>You ought to take this crap back to that other "newsgroup". You know the one where
>the no-codes and the know-codes spend all their time sticking verbal
>knives into eachother.

Well, if you care to check it, I thought I knocked about six or eight newsgroups

off the list when I replied to the original posting. Which I will do again this
time for the benefit of someones disk space. Which other 'newsgroup' would you
like it posted in ?

US?!?!?!?! If John wouldn't create these problems, he wouldn't be
creating this mess. Why are you playing the "blame game"?

Besides, you don't know what Mr. Mackey did to the rec.radio.scanner
group for over 8 months! What me and Richard do are mild by comparison.
Also, if you bother to check, I have posted some useful information in
here since Mr. Mackey amde his ugly comments.

Hi, Tim N7XAU here, I have an Alinco DX70T, I bought it about 3 months
ago and have had great signal reports with it on 20 meters and 6 meters.
If your not interested in 2 mtr all mode then the Alinco is alot
cheaper. I havent had any problems with the radio, I have used it at
special event stations, mobile, and as a base. It doesnt have a built
in keyer, but its easy to use, its front end is hotter than the Icom,
and the recieve audio is better to. Thats my two cents worth.

A week after I had purchased the same rig, I had a similar problem.
basically, the radio went completely deaf. I took it into HRO, adn
they wouldn't exchange it for me... said take it to yaesu.

I took it to Yaesu, and they would not exchange it for me, but they
did diagnose the problem on the spot. I crystal oscillator problem
I believe. Anyway, they repaired it while I waited. I don't know if
mine was a fluke, or if yours is having a similar problem but they
are a great little HT, and yaesu seems to really take care of problems
in a hurry.

4367. New Concept! Cyberscheds Your Next DX and Satellite Contact!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-22 00:00:00 UTC
From: wb6siv@telis.org
Message-ID: <wb6siv-2212962211580001@s08-pm06-ontro-t.telis.org>
Source record: 209299

This is a new use of the WWW that can benefit ham radio operators throughout the world.

You can now schedule contacts with hams all over the world simply and easily by using the WWW and e-mail.I have set aside a section of my web site http://www.sarrio.com for hams to post their request for over-the-air schedules. Included in each posting is a place to list the posters specific ham radio contact needs (countries, zones,IOTA, grid squares ect...). The postings will also include an e-mail link that will allow hams that read the posts, to easily request an over-the-air schedule.

How Can Cyberscheds work for me?

Do you need a certain state to complete a WAS award? Are you just a few countries away from a DXCC? Are you a QRP operator looking to make contacts with hams all over the world? Are you a DX station that has grown tired of the stateside pile-ups on 20 meters? Or are you going mobile into a hard to work county?

In all the above examples you could have prearranged cyberscheds with those hams that you want to work. If band conditions are poor just e-mail the hams you could not work and set up a new schedule.

Cyberscheds are a simple way to have the internet work to the benefit of hams all over the world.

All posting will stay on-line for 6 months, or until the posting is asked to be deleted. Below is an example of one cyberpost visit the cyberpost page and view them all. Below is an example of one of the postings:

Station: BV/N0IAT

Name: Joe Fitter
QTH: Taipei, TAIWAN Republic of China
Bands: 40/20/17/15/10
Mode: CW (occasional SSB, but not much)
Comments: Looking for South America, Central America, and Carribean QSO's. I QRV from a
neighbors shack (local law), so operating times are limited to station availability. QSL via my CBA --
I DO NOT accept IRC's or Greenbacks, just please send me your QSL card and a route for returning
the favor.

> poor reasoning.

Particularly since the poll was a classic example of poor polling technique. Self-selected polls, where the respondents are those who decide to respond, are recognized by statisticians as being one of the most invalid ways to poll.

We hams are fighting over the deck chair arrangements on the Titanic. Our numbers are not large, our hobby is not growing, and our average age, at least on HF, must be somewhere in the 50s or 60s. Christ, you can't hardly have a QSO on HF with someone who isn't a retiree. And in our democracy here in America, lack of numbers translates directly into a lack of political clout. Small wonder why the FCC doesn't even bother enforcing the rules against wrongdoers on the air. They don't care about us.

Dumping Morse Code and recruiting new hams is the only way we will keep our hobby.

Re: Tim Haller's anti-ARRL remarks.

Tim, please take the time to read FIFTY YEARS OF ARRL (written in 1965, but now on its 3rd printing; $4), and 200 METERS & DOWN ($5), for gaining an important perspective on what the ARRL has done for amateur radio the last 80 years. Simply put, without the ARRL fighting on behalf of ham radio all these decades, our hobby/service wouldn't exist today as we know it.

Newsgroup New Year's resolution: Before forming an opinion on a particular topic let's first take the time to do a thorough research on that subject, and cite references so as to back up our assertions in a convincing manner.

73 from snowy Nevada (and missing Hawaii *very* much),

December 23, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WA2VUY, KH2D, K4UEE, K1ER/KH6, K9BG, DF4RD, DL9GOA & DX News Letter, EA1MK, EA3BHK, F6AJA, G4JVG & DX News Sheet, JA1OGX, JA1IDY and PS7AB for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd (TJ), Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings".

3B, MAURITIUS. Laurent, F5PYI, will be active as 3B8/F5PYI until January 3rd. He is reportedly using a FT-707 and dipoles. From time to time, he will be using 3B8CF's station. Look for him on: SSB - 3799, 7045, 14195, 14260, 21260, 28495 and CW : 20 kHz up.

6Y, JAMAICA. Start looking for Gianni, I5JHW, on December 29th, to be active as 6Y5HW or 6Y0HW. Activity will last until January 12th, on all bands with operations on CW/SSB/RTTY.

7O, YEMEN. Zorro, JH1AJT, and DJ9ZB, may be QRT by the time you read this. If you do not work them, there is GOOD NEWS! Xavier, EA3BHK, overheard Zorro announce that he was already invited by the Yemen authorities to come back next year, and that it would be at the end of April, 1997.

FR5, REUNION ISLAND. F6AFJ will be active as FR5GM from December 25th to February 15th. He will be on SSB on 20 and 15 meters from 1100-1200z and again from 1600-1800z.

HR, HONDURAS. Bob, KS9W, and Jerry, K9BG, will be active from January 8th through January 15th, as HR3/home calls. Jerry will operate primarily CW and Bob will operate CW/RTTY while SSB activity will be minimal. They will be on all bands (160-10 meters), and Jerry will also do some satellite operations. QSL to their respective home calls.

JD, OGASAWARA. Just a reminder that a group of JA operators will be active from Chichi Island (IOTA AS-031) for a very short time. They will be active from here December 23-25th. Look for JA4GXS/JD1, JF4LNO/JD1 (a YL) and JN4AWW/JD1 to be active on 160-10 meters SSB/CW. QSL via JA4GXS.

KH2, GUAM. Jim, KH2D, will be active on 160 meters for the next several months. His operations will be primarly on 1828 kHz from 0800z until 1500z. When possible, he will be on during his sunrise around 2030z looking for European stations. QSLs direct to K8NA or direct to his callbook address.

LONG PATH OPENING. John, K1ER/KH6, reports those in Hawaii or on the West Coast may want to watch 20 meters for a long path opening from the Middle East and the Arabian Peninsula between 0330 to 0430z. Stations heard: 7O1A, 9K2GS, A61AJ, A61AN, A61AM and A41LZ.

P5, NORTH KOREA (ed. The following was received just before print and has not been checked out. It may be FACT or RUMOR.) A message on one of the PBBSs states, "EA1MK says that Martti Laine was in Spea// //Spain the first week in December for the URE (like ARRL) annual convention. Martti announced that P5 would be activated before May 1st with a big operation; more likely in March or April."

PY0, ST. PETER & ST. PAUL ROCKS. The DXNL reports PS7KM and friends are planning to be active from here in the same time frame as the VK0IR (Heard Island) activity in 1997.

PS8, ATALAIA ISLAND. Look for PY8JA/p to be active from here. This is not an IOTA island but is good for a Brazilian award (DIB-60). Activity will be from December 29-31st. Modes, times and frequencies are: SSB - 1900z, 14160 kHz; CW - 2000z, 14010 kHz and CW - 2100z, 7010 kHz. QSL via: P.O. BOX 5056, 66601.970 Belem, PA, Brazil, or via Bureau.

PZ, SURINAME. (Just a reminder!) Mako, JA1OEM, who is currently signing FY/JA1OEM, on 30,40 and 80 meters CW in French Guiana, will be back in Suriname on December 24th. He will be active on low bands as PZ5HP. Mako will be leaving Suriname on January 12, 1997. QSL to JA1OEM (CBA).

QSL INFO AND NEWS.....
YUTAKA "YUKI", JA1OGX, wants to advise everyone that QSLs for his XX9TQY operation from the island group of Macau, Taipa Island (IOTA AS-075), go to his home call: Yutaka Tanabe, 1-28-32, Kamitakaido, Suginami, Tokyo 168 Japan. His operation took place November 1-4th. His E-mail address is: HAF00117@niftyserve.or.jp

Claude, F5GTW, QSL Manager for FT5WE, states that all directs and bureau requests for the days between December 29th (1995) and August 29th (1996) have been sent out (around 7000 QSLs!). The only exceptions (less than 200 cards) are cards that Samuel, FT5WE, has to do a search for callsigns in the handwritten log. Samuel will return to France next March. Logs for August 30th to November 5th will be arriving soon and will be replied to as soon as possible.

Dominique, F5SJB, states he has sent out all cards for the TM5CW operation.

TI9, COCOS ISLANDS. The DXNS and several other bulletins report that Carlos, TI4CF, will be active for a few days (or maybe two weeks) starting December 21st. Presumably using the callsign TI9CF. Activity will have an emphasis on 160 and 80 meters.

VK9W & VK0, WILLIS ISLAND AND MACQUARIE ISLAND. There has been several reports that the newly founded Oceania Radio DX Group (ODXG) plans to become active from Willis Island in 1997 and from Macquarie Island in 1998 or 1999.

VK0 HEARD ISLAND INTERNET REFLECTOR IS ONLINE. The Heard expedition's reflector will be the main forum in which you, the audience, can participate in their expedition. Through the reflector, you will be able to pass them your feedback. It will be the focal point for all updates and feedback coming from the expedition team on the island. Their pilot stations will broadcast general info on the island, the environment, their setup, the team, the challenges they are encountering, and other information of interest. With only a few days to go before the first team leaves for Reunion Island, they urge you to join the expedition team today. Here's how to subscribe to the Heard reflector (in 2 steps):
1. Send an Email to: heard-request@ve7tcp.ampr.org
Put in the body: subscribe

2. Just to make sure that it is YOU who are subscribing, you will get a verification reply asking for a confirmation. As specified in that reply, send an email to: listserv@ve7tcp.ampr.org

Put in the body the exact key sentence as you found it in the reply, which looks like:
auth cefd73bb subscribe heard your_name <your email address>
Reproduce that sentence EXACTLY as found in the verification reply.
ADDED NOTE: OPDX InterNet Subscribers will receive the complete detailed new release as an additional bulletin.

VP8, SOUTH SHETLAND ISLANDS. Begin looking for Mark, SP3GVX, to be active from the Polish Henryk Arctowski Base (ex HF0POL) on King George Island. It is currently unknown what Mark's callsign will be. His plans for activity will be to emphasize the lowerbands, SSTV and satellite operations. QSL via SP3FYM.

VP8, FALKLAND ISLANDS. Brian, ZD7BJ, will be active as VP8CWN for the next two years. The DXNL reports he can be found regularly after his sked with his XYL (ZD7XY on St. Helena Island) on 14240 kHz at 2000z.

Z3, MACEDONIA (former Yugoslav Republic). Jan, OH3MIG, will be here for the next 6-8 months as Z38/OH3MIG. His activity will be on all bands CW/SSB. QSL via OH3GZ. Meanwhile, Venco, Z31JA, has been active on 40 meters CW (around 7009 kHz between 2315 and 0130z). QSL via WA4JTK. Z32XA has been active on 80 meters CW (within 10 kHz from bottom of band edge) between 0000 and 0515z. QSL via KM6ON.

The WARC recommendation is to the ARRL as a possible
US osition. There is the rest of the world that has a say in
this also...at least as it relates to the international
treaty.

Frankly, the only comment in the ARRL bulletin indicated
the committee report was based on the poll and not on
any compelling reasons to mandate CW knowledge.
I look forward to the actual WHY the position was
recommended. If it s only the poll results, then that's pretty
poor reasoning.

Try Log-Eqf.... Logging, DXCC etc...Forget if the rig stuff
is in the shareware, but <$40. Ads in QST (EQF Software). Fills freq and
mode into log from Icom. Folows Icom tunning Memory pages... Freq and
mode to radio from keyboard. Packet cluster window. contest mode...auto
time/date logging.
Try the shareware to see if you like the log screen. ARRL Web and
others.
..Current V 8.07 is DOS and I run it in Win 3.1 as a "pif" window on the
shack-486/33 with 8 megs...Can do other stuff in Windows while
Log is in background. The memory pages are nice as the '735 only has
12 memories. They have a full line for freq, mode and a line of info.
Like the info space for what's in the memory - BBC etc.
Arrow down to a memory line, hit enter and the radio takes off.

GL, Bob

I have a Santec LS-202A VHF SSB/FM HT that I am trying to find a schematic for.
A service manual would be nice also, I would even settle for a owner's manual.

The unit receives properly, transmits properly, tx audio is good, rx signal is good,
rx audio is gone..... You can see the receive signal on the s-meter, and if you listen
very closely you can hear clear audio from the speaker, only very faint. I have bypassed
the speaker and replaced the audio IC, and now want to get some service info to go
further.

Any help appreciated, A current address for Santec or it's remains would also be a big
help. A copy of a manual and schematic would be a blessing.

Seasons greetings

I've owned my MFJ-259 about two months and love it, but...

Both battery holders have broken on the ends where the 9 volt battery type connector attaches. I have yet to take advantage of MFJ's one year, no matter what warranty on this item, so I am not saying anything bad about MFJ. It's just that you should inspect yours for cracks and have them replaced before they leave you high and dry AFTER you're up on the roof or the tower.

Otherwise I love it. It's a great unit.

>--
>Murray Cotnam (Sudbury,Ontario,Canada)
>
>AMATEUR RADIO CALLSIGN: VE3MCN

Truly amazing. I really thought that Canadian Amateurs were required to know the frequency allocations.
There are NO sub-bands allocated in Canada. Only MAXIMUM allowable bandwidths. On 80 Metres (that is how we spell meters up here) the maximum bandwidth is 6 kHz for the entire range from 3500 to 4000 kHz. Translated this means you can use any mode anywhere on the band provided the bandwidth does not exceed 6 kHz. Therefore CW, RTTY, SSB, SSTV and even AM are legal anywhere on the band. There are suggested band plans some of which may be more or less related to the list given by VE3MCN, but they are only suggestions - just like DX windows which many Hams on both sides of the border seem to be completely ignorant of. Restriction of modes to sub-bands is subject to gentlemen's agreements, and if you get on HF much you must know there is a singular lack of gentlemen on the air nowadays.

Then maybe electric chairs should use 9 volt batteries :-)

The fact that say a 220 volt 100 watt light bulb will pass less
current that a 110 volt 100 watt light bulb is not relevant to the
danger of shock, although it might well affect the risk of fire from
poor wiring.

In general it's a current through YOU that will kill you from
electrocution, and twice the mains voltage is likely to cause about
twice the current to flow through you.

Cross-posted to: rec.radio.amateur.dx,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I have had a try at both, and I like the 706 better. It is more expensive and harder to operate, but it does more, too. Although the DX70 comes with a cw filter, it is not very effective. The optional filters in the ICOM are pretty good (I have the 250 Hz in mine) although the rig does suffer some from "blowby", that is, signals leaking around the narrow filter. Neither rig has a very good noise blanker. The Alinco, I think, has the edge in strong signal handling capability, although I am judging this by ear as opposed to having the rigs on the bench. Alinco's break-in is also better. I like the fact that the ICOM has two meters, even if it is only ten watts. I already had a Mirage B3016 in the car, so now can run about 100 watts output on 160 thru 2.

The mods were unimportant to me as I don't see much value in opening up the transmitter for dc to light.

73,
Bill N9HH

HI Bob. I missed that post, but remember... Ham Radio is nothing like what you see here on the net. I don't see all the things I hear about on here, and I'm on HF CW a lot. It's a nice bunch of people, and you'll find nearly all of them friendly and glad to accomodate your speed. I know lots of hams, self included, that adjust our speeds and work the new folks.

Get a rig and get on the air!

I have two buddies who both own the Pro51, They both like it. Only
problem is, RS changed the pro51 in mid production to include and
permanent cell block. The earlier version only needed a keyed sequence
on the pad.

Hello everyone,

My name is Vic and I am looking for some information. Being new to HF I know very little ... about the whole scene. Looking at rigs however, I have decided I'd like to buy either an Alinco DX-70T or an Icom IC-706.
Does anyone have an actual comparison of the two rigs side by side so as to comment on performance? How about features on HF & 6M between the two? I know the DX-70T comes with CW & SSB narrow filters built in and they are an option on the Icom, but how about actual performance between the two?
I have seen MANY mods for the IC-706 but NONE for the DX-70T. Are there mods available for the DX-70T?
I have heard the 706 sounds lousy on HF with a stock mic. A friend said he talked with a DX-70 owner and it sounded like the "big rigs"! Is this true?
How about this ... ya know the typical finger indent on the tuning knob? Well, the 706 has it and I've tried it. Very comfortable, works well. The DX-70 doesn't have it! How is it to tune??? I don't have anywhere to local to try one. In fact in SE Florida here, don't know of a single person with a DX-70. Don't see them for sale either!

Which is the better HF rig? Awaiting your comments (and tips to mods)!

>Truly amazing. I really thought that Canadian Amateurs were required to know
>the frequency allocations.
>There are NO sub-bands allocated in Canada. Only MAXIMUM allowable bandwidths.

Not true. Bandwidth is allocated by international agreement and is federally
regulated. RAC has worked on a bandplan to approximate the US and
International bandplan model. It is as follows:

The RAC HF Band Plan

(approved April 22, 1995)
---

160 Metre Band - Maximum bandwidth 6 kHz

1.800 to 1.820 MHz - CW

1.820 to 1.830 MHz - Digital Modes

1 830 to 1.840 MHz - DX Window

1.840 to 2.000 MHz - SSB and other wide band modes

80 Metre Band - Maximum bandwidth 6 kHz

3.500 to 3.580 MHz - CW

3.580 to 3.620 MHz - Digital Modes

3.620 to 3.635 MHz - Packet/Digital Secondary

3.635 to 3.725 MHz - CW

3.725 to 3.790 MHz - SSB and other side band modes*

3.790 to 3.800 MHz - SSB DX Window

3.800 to 4.000 MHz - SSB and other wide band modes

* 80 metres normally LSB, to stay within Band Plan SSB should not be lower than 3.728 MHz.

As example note US stations cannot operate below 3.753 MHz

---

40 Metre Band - Maximum bandwidth 6 kHz

7.000 to 7.035 MHz - CW

7.035 to 7.050 MHz - Digital Modes

7.040 to 7.050 MHz - International packet

7.050 to 7.100 MHz - SSB

7.100 to 7.120 MHz - Packet within Region 2

7.120 to 7.150 MHz - CW

7.150 to 7.300 MHz - SSB and other wide band modes

30 Metre Band - Maximum bandwidth 1 kHz

10.100 to 10.130 MHz - CW only

10.130 to 10.140 MHz - Digital Modes

10.140 to 10.150 MHz - Packet

---

20 Metre Band - Maximum bandwidth 6 kHz

14.000 to 14.070 MHz - CW only

14.070 to 14.095 MHz - Digital Mode

14.095 to 14.099 MHz - Packet

14.100 MHz - Beacons

14.101 to 14.112 MHz - CW, SSB, packet shared

14.112 to 14.350 MHz - SSB

14.225 to 14.235 MHz - SSTV

17 Metre Band - Maximum bandwidth 6 kHz

18.068 to 18.100 MHz - CW

18.100 to 18.105 MHz - Digital Modes

18.105 to 18.110 MHz - Packet

18.110 to 18.168 MHz - SSB and other wide band modes

---

15 Metre Band - maximum bandwidth 6 kHz

21.000 to 21.070 MHz - CW

21.070 to 21.090 MHz - Digital Modes

21.090 to 21.125 MHz - Packet

21.100 to 21.150 MHz - CW and SSB

21.150 to 21.335 MHz - SSB and other wide band modes

21.335 to 21.345 MHz - SSTV

21.345 to 21.450 MHz - SSB and other wide band modes

12 Metre Band - Maximum bandwidth 6 kHz

24.890 to 24.930 MHz - CW

24.920 to 24.925 MHz - Digital Modes

24.925 to 24.930 MHz - Packet

24.930 to 24.990 MHz - SSB and other wide band modes

---

10 Metre Band - Maximum band width 20 kHz

28.000 to 28.200 MHz - CW

28.070 to 28.120 MHz - Digital Modes

28.120 to 28.190 MHz - Packet

28.190 to 28.200 MHz - Beacons

28.200 to 29.300 MHz - SSB and other wide band modes

29.300 to 29.510 MHz - Satellite

29.510 to 29.700 MHz - SSB, FM and repeaters

AMSAT Phase 3D Satellite

AMSAT Phase 3D (scheduled for launch in 1996) Band Plan has an uplink of 21.210 MHz to 21.250 MHz. While these frequencies are similar to RS 12 the Russian satellite, Phase 3D with its elliptical orbit will be accessible for hours rather than the few minutes of RS12. There could be major communication problems on the satellite and this portion of 15 metres if the band is active with land communication and the satellite is in the 15 metre uplink mode.

How the RAC HF Band Plan was developed

The HF Band Plan is a voluntary, gentleman's agreement, intended for the guidance of and observation by Canadian Radio Amateurs. Without these guidelines chaos would set in. The main mode of enforcement is peer pressure.

Industry Canada as a government department regulates the amateur radio spectrum. They regulate the frequencies and the bandwidth, but not the modes of operation within the amateur spectrum. A Band Plan (even though it is voluntary) is necessary for the guidance of the users.

The Canadian HF Band Plan was formulated by a committee of Radio Amateurs representative of a cross section of each geographical district. After a consensus was reached by the committee, the HF Band Plan was submitted to the Board of Directors of Radio Amateurs of Canada for approval.

The Plan was approved on April 22, 1995.

The HF Band Plan reflects the interests of Canadian Radio Amateurs, while taking into account the regional and international concerns of the International Amateur Radio Union. The plan addresses the needs of Canadian Radio Amateurs for a workable HF Band Plan.

You are correct in saying that it is a "Gentlemen's Agreement" and, as stated, is not obligatory so those among us who wish to be Islands unto themselves won't heed it, as usual.

>On 80 Metres (that is how we spell meters up here) the maximum bandwidth is 6
>kHz for the entire range from 3500 to 4000 kHz. Translated this means you can
>use any mode anywhere on the band provided the bandwidth does not exceed 6
>kHz. Therefore CW, RTTY, SSB, SSTV and even AM are legal anywhere on the band.
>There are suggested band plans some of which may be more or less related to
>the list given by VE3MCN, but they are only suggestions - just like DX windows
>which many Hams on both sides of the border seem to be completely ignorant of.
>Restriction of modes to sub-bands is subject to gentlemen's agreements, and if
>you get on HF much you must know there is a singular lack of gentlemen on the
>air nowadays.

Quite true, and sadly so, but most respect them and, as I said, only the non-conformists refuse to allow themselves to be "told what to do" and reject authority in any form. Oddly enough, they do allow themselves to be controlled by cult leaders though. ;)

Just a note to wish EVERYONE here a happy holiday season, and to ask some advice. Is the Kenwood Th-50t dual bander ht any good? I was thinking of getting one for xmas. Right now, my ENTIRE shack consists of a four year old Htx-202, a Pro-2030, and a Dx-390. Needless to say, I'm quite limited financally at the moment, so I really need the biggest bang for my bucks. I also have an extremely limited amount of space in my flat in Manhattan, so all I can afford for my shack are ht's. Any and all advice Ican get on a HT only shack would be greatly welcome and appreciated.

Which is, as I understand this, exactly why,

>Yes, narrowly tuned systems offer little protecction.

however, isn't there an equally important reason why we don't used them?

Isn't it true that one of the problems is that any structure or wire length or
metallic object that is reasonable long, say 20-100 feet or so, has yet another
problem when hit? Doesn't the strike actually induce the signal in it which
is excited by the hit, much you get when you hit a gong with a hammer?

You putem tuned section in system. It gettum hit. Hole thing rings likum
bell when zapped. Right?

>The highest frequency components occur at the beginning to the pulse,
>however, not later. They are inherent in the rapid risetime of the pulse.

>resonance effects of these momentary very high energies, and
>then the bulk of the discharge will follow that path (because
>it has become a low impedance ionized channel).

Now you have me curious! Yes, I understand the math behind it, however,
I early in life concluded that the dominent observed spectrum came from
a diffrent phenomeae. I was taught while we were studying all this back in
the '60's in the sferics project that the observed frequency spectrum was
more a function of the plasma length in the step functions by which a stroke
propagates.

If you do the work, I think I remember that you actually can see the leaders
in the stroke proceed, generally upward from the ground, in stages of about
150 feet in length. At the moment of initial truth, the "elements" of the

radiator that is finally the complete path of the ionized column are initally formed of a long chain of these chunks.

The chain is driven into oscillation by the inrush of the current, focused at these longer wavelengths and the lower frequencies first, by the step segments of the leader segments. That's the same effect you get when you have a 40 meter beam up there and it, shudder, gets hit! At the moment of impact, because it is reasonant at 40 meters, it also rings at 40 meters.

As the stroke progresses through time, I think I recall that the segment lengths collapse into shorter and shorter segments, at the same time the energy level available to support the column is decaying off, at least if not spiked by a bleed source from somewhere else in the cloud in a massive re-exication surge.

Although you are correct about the math earlier, I was told that it is the collapsing plasma segmentation that was thought to produce the rise in the average frequency at the end of the stroke as it dies out.

>There are two important reasons to bond the coax at the base of the
>tower. The first is that it shunts the inductance of the tower in
>such a way that the coax will have a lower potential on it, regardless
>of length. And the second reason is that it shorts out the single turn
>transformer formed by the tower and the coax. With several kiloamperes
>flowing down the tower, a very large surge can be induced in even a one
>turn transformer, and we don't want our coax to carry this over to
>the equipment.

I think I mis-implied this. I was thinking more about the practice that I have seen done where the coax is bonded over and over again to the side of the tower on the way down, not at the bottom.

The goal, as I think has been said well by one other poster I can't recall by name right now, is to focus all the ground, for example, in your shack, to one common sink point and then make sure the grounding work is done as best as possible for that one sink path.

In that the base of the tower is the sink point for the whole thing out there at the tower, that's a common goal for all of us in this thread, I would think.

>Gary
>--

You higher order energy at the start of the hit interest me. I can obviously understand the reason for the truth in that. In that the shortening of the segments of the plasma column has been fixed in my mind for so many years, I need to go back to the texts and find the references to it. Besides that, I need to go back to George Huebner, W5GDK, here locally and re-ignite this part of the column.

As always in life, the longer one goes around the more insightfull one gets, sometimes even sic-lycly during crow season.....

:)

Watch the trimming, I didn't write the text attributed to me above.
But to answer the point, it has been done, many times. There are a
fairly large number of stations holding 2m WAS. That's not very useful
I admit, a linked repeater system would be marginally more useful. A
national switched data system would be much more useful.

>work.

This is myth. Ben Franklin, the inventor of the lightning rod, understood
its function, as does every competent lightning mitigation specialist.
It does not serve to "dissipate" charge and prevent lightning strikes
as some unscrouplous hucksters have claimed down through the years. In
fact it serves quite the opposite purpose. The reason this is so can
be easily shown analytically from the known physics of lightning, and
has been demonstrated time and time again in the field. The FAA did
a carefully instrumented detailed test in Florida of these so-called
dissipation arrays, comparing them to ordinary lightning rods, and to
unprotected structures. They were not effective in preventing strikes,
and often sustained damage from a strike whereas an ordinary lightning
rod did not.

The purpose of any lightning rod is to become the preferred target
for a strike. It does this by being the first object to break into
streamer formation in the local area. It is an advantage for it to
be sharply pointed because streamer formation starts at a lower
potential from a sharply pointed object than from a blunt one.
A rod with a 1 inch radiused tip requires about 15,000 volts to
break into corona, but a sharply pointed object can break into
corona at less than 5,000 volts (the sharper the point, the lower
the voltage because the sharp point concentrates the field).

Corona changes to streamer formation when the current flow rises
above about 20 microamperes for any point discharger. The streamer,
a column of ionized air, rises rapidly above the point of origin.
When it meets a downward step leader from the cloud, the circuit
is complete and the primary stroke flows upward from the ground
to the cloud. This is followed by a much larger return stroke
down the now heavily ionized path from cloud to ground. This
cycle of primary and return strokes may repeat several times
in some cases before local charges are equalized.

Typically, about 20 coulombs of charge are exchanged between cloud
and ground during a strike. If the point discharger were to be used

to "dissipate" the charge and prevent a stroke, it would have to
do so at a current flow of less than 20 microamperes, or it would
break into streamer formation and promote a strike. Dissipating
20 coulombs at a rate of 20 uA would take 1,000,000 seconds, but
the cloud charge, and the mirror charge induced by it in the Earth,
can move at 45 MPH in a thunderstorm, so any given point would only
have some tens of seconds to neutralize charge.

Even with the so-called dissipation wire used by some of the
hucksters claiming they can prevent lightning strikes, only
some thousands of points are available. That's still a couple
of orders of magnitude too few. And in practice, charge flow
cannot be evenly distributed on these "dissipation" arrays,
so some points will break into streamer formation anyway.
Thus they will attract a lightning strike just like an ordinary
lightning rod, but they aren't sized to handle strike current,
and uncontrolled sideflashes will occur, likely causing damage
to other things as well as to the "dissipative" array.

>Functionally, a good antenna ground may have a similiar effect. Often,
>lightening does not pick what you would consider the best path, but
>selectively seeks out something that might present a bit poorer path.

Lightning is electricity, and like any electricity it must follow the
ordinary electrical laws. Kirchhoff's laws hold just as surely for
lightning discharge paths as they do for any other electrical circuit.
Of course lightning potentials can become very high, and various air
paths can arc, and lightning strike currents are in the kiloampere
range, and can cause induction effects, and the lightning pulse can
be considered RF because of the sharp risetime of the discharge, so
all the electrical laws must be applied properly to model the behavior
of lightning and to design effective mitigation systems to prevent it
from causing damage.

There are less than a thousand people in the world with the knowledge
and experience to do this properly first time every time at every site,
but anyone *can* learn to do it successfully for a particular site if
they will take the time to become familiar with the physics of lightning,
the geometry of their particular site, and the methods by which the
discharge can be controlled. You can't prevent lightning, but you can
control the path the discharge takes so that it will not harm your
equipment, (or your home, or you).

>having kittens ?

This could be a near field induction effect as Jim suggests, if the
antenna is very near and you're running a bunch of power. Much more
likely, however, is that this is caused by lack of antenna balance.
Unless you are feeding an end fed longwire directly from the shack,
"ground" shouldn't enter into this at all. (Amateurs tend to imbue
"ground" with almost mystical qualities. It has none. Ground is just
the point we choose arbitrarily to be our zero potential reference.
Earth is something else entirely. It is a large sheet conductance
which may have varying potentials at various points.)

If you are using a properly symmetric dipole with the feeder routed
at right angles to it, and you're feeding it with proper balance
(either with balanced feeders or using a choke balun at the antenna
feedpoint), you shouldn't have hot shack problems. If you aren't doing
one or more of these things, however, you can have a hot shack as the
feeder becomes part of the radiating structure of the antenna and your
rig becomes an end point, IE high RF voltage point, of the antenna system.
The fix is simple, insure that the antenna system, including feeders,
is symmetric and electrically balanced. This will leave the rig with
a net zero RF potential, IE it will have *become* RF "ground" for the
system whether it is attached to Earth or not.

A quick fix which will sometimes mitigate hot shack problems is to
change the length of the feedline. If the rig is currently at a
standing voltage node, changing feeder length will shift it toward
a current node instead, and potentials on the rig and associated
equipment will decrease. But the better fix is to solve the balance
problem which is causing the feeder to become part of the antenna
in the first place.

From: Kingfish@voicenet.com
Message-ID: <59jrfq$5bp@news1.voicenet.com>
Source record: 209395

Hi Everyone,

A neighbor of mine has a ham or cb radio, and his transmissions come out over my stereo, telephone, clock radio - anything with a speaker. The FCC won't do anything about it.

I know there are filters you can put on your telephone to block some of the interference. Is there anything like that for stereo equipment?

Thanks,

JOn

A while back, some guy in Las Vegas posted this bright idea on
packet, but he wanted to link a solid line of 2 meter, and 440
repeaters, across the country. He envisioned a nationwide net on
this thing, claiming that he could do it on existing repeaters, with
no backbone.

His thought was that he could link a 2 meter machine in one area, to a
440 machine in another, using a mobile at each site.

Said he could do it easily in 16 hops.

Scary.

I too also agree with dave. I have some reservations about the ARRL,
though. It is my impression that they don't listen much to the largest
growing population in amateur radio: the Technician no-coder.
Unfortunately, because of this lack of attention, the arrl suffers. If
they would pay a little more attention to our concerns, they would be a
much better organization for it.

Eric.

That exactely is what comes in from the transformers on the street poles into american houses. Thre street transformer is transforming down to 240, and from both ends of the secondary two wires comes, with the neutral wire, which is just the center tap of the secondary. So where is the problem???

Yup. That's Carl for you. In one sentence he will call CW-supporters a
bunch of ignorant elitists, yet in the next breath tell you how only
people with PhDs in EE should be hams. He'll also usually tell you how
he has forgotten more RF theory while standing in front of the urinal
(not a short period of time, given general prostrate health at his age)
than the entire combined population of all amateurs throughout the
entire universe put together knows.

Listening to Len's Ham Radio & More show early this morning on WWCR and this pro-code, anti-code business... and Len's promotion of the no-code General...

Did'ja ever notice that high speed code atop music is used throughout the programming to move from feature to feature?

Hmmm... ironic, isn't it?

dstark@frontiernet.net (D Stark) wrote:

> You, too, Bill. Knock it off. Those of us who still
>have some respect for your technical talent are getting
>quite impatient with this garbage.

All right, you LISTEN to me, David. Five times now, I have popped
onto this newsgroup......to stay...to be helpful and to learn. Each
and every damn time, the sickos and slimeballs crawled out of the

woodwork to have a go at me. And when they started in, YOU and many others remained silent. Why didn't you speak at the onset when the cause was self-evident?

By and large, there's always silence except for the cacaphony of howls from the few when I pop 'em back. But you understand this much: I do not play by your rules. Or Michael Alexander's. Or John Mackey's. Or Peter Boe's. There is ONE rule I hold inviolate....and that is that I will NEVER attack someone first. Second, yes. Not first. So if it doesn't happen first, it doesn't happen at all.

No, it is NOT incumbent on me to "go back where I came from" nor to do anything else about it, other than to dig in for the count. If you and the other good participants of this newsgroup care about the quality and content here, then focus on THE problem, not the response to THE problem. It simply would not exist if it didn't START in the first place. And you can TAKE it to the bank that I don't START it.

Now I am getting tired......literally SICK and tired... of having my business and livlihood thrown in my face as a form of leverage to force me to "behave" in some preconceived manner. Your last sentence above is a textbook example of what I am talking about. Talk about "impatient", man, THAT crap tickles my Impatient Meter to full scale.

My talent either IS or IS NOT. Period. It stands on its own merits, and it is not up for general barter. Much of me is FREE. Some of me comes at a price. Neither has anything to do as barter with my desire to participate.....to be helpful and to learn.....on forums like this one. There is no direct relationship to your subtle insinuation, aside from the self-evident fact that I am BOTH a hobbyist AND in "the business". I do not deny it; I do not hide it. It is a very unique position in which I live and play.

You heard of the old adage about mixing business with pleasure? Well, it's tough for me, pal. But it sure doesn't mean that I have to choose one or the other. And you are NOT going to make a choice for me, especially not at whim and fancy to suit your argumentive purposes.

I am NOT going to have the "business side" leveraged against me, not come hell or high water. And YOU, my friend, are the first and foremost one in all of scannerland who I want to understand that. You see, in all cases, HOBBY comes first - business comes second. But when people like YOU stoop so miserably LOW as to leverage the secondary side against me, then we will face up .... and deal with it, right out in the open. Like HERE and now. Just like I was and am ready to deal with Moss, Duff, Mackey, Alexander, and anyone else who tried to play that grossly unfair and one-sided game on me.

You may as well be the first one to understand this one singularly vital aspect about me. When the leverage crap starts up, my business goes into the knapsack and out come teeth and claws. I will not be

intimidated, threatened, coerced, or manipulated at ANY cost that you can reasonably afford, and none that I can imagine. The price to intimidate me is a lot more than YOU or anyone else can afford, let's put it that way. The price to get along with me is.....FREE. And it is time you and certain others got a solid grip on that. And when I said "get along with me", there are no other strings attached. Deal straight, and we'll get along.

And another thing..... you may as well learn on behalf of the silent majority.....is SPEAK FOR YOURSELF! Play the gang game on me and I'll slap your jowls into vibrating like a harpsichord. No if's, and's, or's, or but's.....

Running a close second to my loathing of leveraging business against me is the vain attempt to speak for others, to wit:

>.....Those of us who still have some respect for .....

WHO is this "us", David? Who empowered you to speak for them? Well, you just understand that I don't buy it, even if you do feel free to speak for others. I'm going to listen to YOU; not some hypothetical "them". You just speak your own mind and leave it to others to speak theirs, if they have one, and if they feel like it.

Now all that said and done.....you want a quality newsgroup? Don't lay its failure on me. And don't dictate terms to me. This is not a neighborhood where one person's fireworks can burn another's house down. You just live by your terms and leave me to live by mine. I cannot possibly deprive you of any rights and entitlements here in virtiuality, nor.....on a hobby level, can you deprive me of mine.

But, oh hell yes, you *can* get to me via my livlihood, huh? And when you can't get to me in any other manner, you go for the juglar. Guess what? I have a cast-iron juglar.....

So don't jump onto the business leverage bandwagon thinking that will intimidate me. It won't. There is absolutely nothing in or about you that can leverage me to ANY extent aside from one thing: - are you ready? Grab your mouse and prepare to COPY and PASTE to a text file:

Straight, above the table, clear, well-focused, articulate discussion.

THAT and only THAT has a chance of getting through. I will always listen to and consider straight talk. Anything other than that is not even negotiable, much less "reasonable".

You want the problem solved? I'll help you solve it. But first, it has to be identified and laid out on the table. Just WHAT do you see as THE problem? Would it be any different if I were JUST a plain old hobbyist? Sure it would! Duff, Mackey, Alexander, and Boe would have to find another target for their aspirations. THAT would be THE difference, but the problem would still be there. It's ALWAYS there.

Go to ANY other newsgroup or network forum, and you will see personifications of Duff, Mackey, Alexander, and Boe......and an ebb or tide of a brouhaha. It ain't gonna change, David. Not the manner in which YOU attempted above. And maybe not in ANY manner, for all I know. Definitely not by the brand of cockalorum you brandished above.

But here's a deal for starters:

1. I don't leverage your business and talent against you. Don't you ever do it to me.

2. I don't speak for you or others; don't you speak for me or others.

3. I don't attack you; don't you attack me.

4. I don't change your ways; don't you change mine.

5. Get emotional over your wife; not me and/or mine. I will get emotional over my wife; not you and/or yours.

6. Eat off your own dinner plate and I'll eat off mine.

7. If, by some weird chance, one or the other of us happens to step on the other's toes, despite adherance to the above, then we sit down and straight-talk it out.....here, if appropriate, or by e-mail if more appropriate there.

Howzzat for starters?

Source record: 209408

I am interested in getting into Shortwave listing and maybe ham radio. I will be purchasing a radio in the next few days. I have a question can someone tell me what would have a better receiver, a Ham transceiver such as a Kenwood TS 850S or a TS 450S verses pure Communications receivers made by Kenwood or Sony or Grundig etc.

Primarily I would like to listen to the Ham Bands and then Shortwave radio. I have no intention to transmit until I get my license probably in 6-12 months. So can someone help me out and let me know which would have a better RECEIVER.

Thanks, in advance.

Donald

Don't bet your life that the muscle contraction will save you. The muscles controlling the hand can contract so hard you can't let go. It depends on the current path through the body whether you'll clamp down or jerk clear. I got hold of an old RCA WP-33 (285 volts *stiffly* regulated) and couldn't let go. The only way I got free was to bash the 6080 with my free hand (you know, the one you're supposed to keep in your pocket when you prepare to shake hands with Reddy Kilovolt).

>The body is just another power consumer. Voltage is one thing, the body
>resistance another, but veeeeeeery important is the time of exposure. A
>few millisecond at 220 Volts are less harmful than three seconds at 110.
>Time of exposure is a pivotal factor in all that, too.

It is if thermal damage is the major concern. It often isn't. It only takes a few milliseconds of current to put the heart into fibrilation. And it doesn't take much. 30 mA through the chest will do it. This is where 240 can be a "lifesaver". The current is often much higher than 30 mA and the heart muscle clamps down very hard, stopping the heart entirely. Often, the heart will restart on its own when the current flow is removed. It will rarely come out of fibrilation on its own.

BTW that's what a defibrilator does, it delivers a pulse of current to the heart strong enough to stop it entirely, allowing it to come out of fibrilation.

I designed an adjustable computer desk and now have a set of plans available. The desk (including two bookend style desktop shelves) is built from a single sheet of 3/4" plywood with no wasted wood. It might work out as an ideal platform for limited DX'ing. It has just over 10 square feet of surface area.

It is a ten year old design that has been updated frequently and extensively tested. I think it's a perfect desk for study, computer, hobby, etc.; however, I am prejudiced on this matter!

If you would like a free copy of the plans, then please e-mail me your snail mail address or write to me at my snail mail address below. I mail out the plans free. I ask only that if you build and enjoy the desk, then you send me a small payment (whatever you think that it's worth to you - small!). This will help me continue to mail the plans out to individuals, schools, etc.

Already have. I'll look at rejoining this spring.I have already heard from a rep in the arrl by e-mail and given him some additional details regarding recent events occurring here in Phoenix.

Thanks for the friendly advice, thoough. I am trying to convince other "no-coders" in my area to join up as well. If we can get a large portoin of that population to join, it might make the ARRL an even stronger force for the ham community in general.

Also, with regard to the code/no-code arguement, I don't wish to see morse code go the way of the dodo. I am concenred that if morse code does disappear, we may lose a valuable piece on knowlege.

Eric.

Carl,

You are truly mislead. The only reason the "beepers" would like to maintain the code is that it might prevent the HAM band from becoming the new CB band. The presumption is that if you take the time to learn the code, you may truly be interested in the hobby.

If you don't think that is the case, listen on 2 meters sometime. A number of the no-code licensees are turning that into a zoo. Many of the repeaters are turning to closed status just to filter out the junk and abuse. Sure, there are licensed HAMs that abuse any band, but the frequency of abuse seems higher where the no-coders play. To be sure, there are many responsible no-coders, but the one-day-crash-courses are bringing all manner of abusers in as well.

Perhaps the technology is changing and Morse code may even be an anachronism, but it tends to exert a Darwinian-like control on the operators. In other words, it keeps a lot of idiots out; not all mind you.

In truth, people like yourself are the ones causing the divisiveness. All of the "elitist" labels and name calling are the real cause of the animosity. You might try to see the issue from someone elses shoes and then work within the system to make the changes you seem to think so important.

Happy Holidays.

Will,
Good point! However, have you listen to the HF bands lately? Try listening in on 7259 KHZ or 14,313KHZ. there are subjects discussed with such colorful language as to make a 30 vet in the navy blush!

Even then, that is not as bad as what some of the local members do on the 146.540 simplex frequency here in Phoenix. I am talking about lack of I.D., use of foul language (every 4th word or so) and explicit desriptions of subject matter best left to the porno tapes found in some bookstores.

You do make a good point though and I do appreciate it.

Thanks.

Hmmm, in the UK, one can safely draw 13A from a normal flat pin 240V outlet. I do believe we are squarely in the 'academic' realm if we're talking about how much current can be delivered into a human body at 120V/240V.

> is much easier than from without.

You know, I just wish the ARRL could be more like a big version of TAPR. Like the TAPR web sight has so much cool stuff on it. Some of the stuff is fun and some has some real engineering balls. Why can't ARRL be making group purchases of DSP kits and stuff? Is it the proximity to Texas Instruments that's going on here or something?

Perhaps the 'democracy' aspect of ARRL means it will never really be the leader in these things. So, old patterns of operating get a constituency that prevents change. I mean, I figure we'll have VHF bands full of private repeaters that are used maybe 1hr per month until I'm old and dead -- however silly this is technologically. On the other hand, there's no constituency for a mode that doesn't exist yet.

Btw, what do you guys think of the latest handbooks. Didn't older versions have index marks on the end of the paper so you could find stuff? Maybe I'm confused. Personally, I think it'd be a better read to have the projects at the beginning of the chapter, and then explain all the theory afterwards. I do still enjoy looking at projects like the big power 2M amplifiers and stuff. Even though I'd be way scared of cooking myself with such a beast.

I'll probably end up joining the ARRL eventually, as I'm getting back into ham radio stuff. I think my first check is going to Amsat, mainly cuz' they seem to be pretty goal oriented, and short of cash lately.

the ham bands sounds like the cb band now, look at all the truck drivers
on 2 meters. i put my repeater on p-l because of them.

The NWS WX receiver uses a 1050 Hz tone to activate. S-Com repeater controllers are easily set up to send this frequency tone. I have thought about doing the same conversion here in Paoli, IN. But so far have not had enough takers in the club.

Here's your first mistake Larry. Carl doesn't consider these to be HF
frequencies. So actually there is no relevance as they have no part in
his agenda.

> As a CW user, and as a human being, I don't feel superior, better or more elite
> that anyone else. You are the one with the superior elitist attitude. You

Mistake #2 Carl can copy 20 wpm in his head. He can do this as there
really isn;t much of anything up there to take up room except for copying
code. Does having a vaccum between ones ears really do that for you??

> It really bothers you doesn't it? People without college degrees can copy CW,

By your sig line, I can tell you're one of the technically oriented
types. HMMMM, according to the book of CARL, you don't exist. Funny,

you seem proud of the company you work for. Carl actually seems embarassed to divulge his employer. Perhaps he's a janitor (technically oriented sanitation engineer).

Just my opinions mind you and therefore, according to Carl, allow me to tread on thin ice. Judging friom the condition of the lake, seems missed the thin part and am now capable of skating on thick ice. OH well, maybe next time/

Enjoy the holidays.

Hi.. I just purchased a unbuilt heathkit ID-5001b weather station. The kit that I purchased had been opened some time ago and a few parts have gone a stray..

Can anyone advise where, If possible where I can obtain any parts and/or possibly purchase any of the options. Better yet have any schematics so I can build them?

Any help would be appreciated..

thks

Mike

I am not a ham. However, if I was, I would take the side of the required CW code tests. Right now I look up to hams as being those who have spent the time to learn a craft - those who prefect CW make it an art. If you do away with the code you take away a standard. This country has been very good at eliminating standards in the past 30 or so years. "If ya make peanut standards, ya get monkeys." Do away with code: next time I see some cigar chewin guy on Interstate 80 round Rockaway thumbing a mike, Blah, Blah - I'll think "CB or 2 meter" what's the difference? I know the difference between "CB and CW".

Well said, I agree.

In amateur radio, we are taught to be self policing & to lead by
example. It is sad that some of these individuals seem to have
lost that knowledge & integrity.

So instead of looking honestly & try to address the issue that Will has brought up, Eric tries to de-focus the attention from him by pointing at another problem.

Sounds like a little kid upon getting in trouble says, "but mommy he did it too" & then points at his friend or brother.

All right, you LISTEN to me, David. Five times now, I have popped
onto this newsgroup......to stay...to be helpful and to learn. Each
and every damn time, the sickos and slimeballs crawled out of the
woodwork to have a go at me. And when they started in, YOU and many
others remained silent. Why didn't you speak at the onset when the
cause was self-evident?

By and large, there's always silence except for the cacaphony of howls
from the few when I pop 'em back. But you understand this much: I do
not play by your rules. Or Michael Alexander's. Or John Mackey's.
Or Peter Boe's. There is ONE rule I hold inviolate....and that is
that I will NEVER attack someone first. Second, yes. Not first. So
if it doesn't happen first, it doesn't happen at all.

No, it is NOT incumbent on me to "go back where I came from" nor to do
anything else about it, other than to dig in for the count. If you
and the other good participants of this newsgroup care about the
quality and content here, then focus on THE problem, not the response
to THE problem. It simply would not exist if it didn't START in the
first place. And you can TAKE it to the bank that I don't START it.

Now I am getting tired......literally SICK and tired... of having my
business and livlihood thrown in my face as a form of leverage to
force me to "behave" in some preconceived manner. Your last sentence
above is a textbook example of what I am talking about. Talk about
"impatient", man, THAT crap tickles my Impatient Meter to full scale.

My talent either IS or IS NOT. Period. It stands on its own merits,
and it is not up for general barter. Much of me is FREE. Some of me
comes at a price. Neither has anything to do as barter with my desire
to participate.....to be helpful and to learn.....on forums like this
one. There is no direct relationship to your subtle insinuation,
aside from the self-evident fact that I am BOTH a hobbyist AND in "the
business". I do not deny it; I do not hide it. It is a very unique
position in which I live and play.

You heard of the old adage about mixing business with pleasure? Well,
it's tough for me, pal. But it sure doesn't mean that I have to

choose one or the other. And you are NOT going to make a choice for me, especially not at whim and fancy to suit your argumentive purposes.

I am NOT going to have the "business side" leveraged against me, not come hell or high water. And YOU, my friend, are the first and foremost one in all of scannerland who I want to understand that. You see, in all cases, HOBBY comes first - business comes second. But when people like YOU stoop so miserably LOW as to leverage the secondary side against me, then we will face up .... and deal with it, right out in the open. Like HERE and now. Just like I was and am ready to deal with Moss, Duff, Mackey, Alexander, and anyone else who tried to play that grossly unfair and one-sided game on me.

You may as well be the first one to understand this one singularly vital aspect about me. When the leverage crap starts up, my business goes into the knapsack and out come teeth and claws. I will not be intimidated, threatened, coerced, or manipulated at ANY cost that you can reasonably afford, and none that I can imagine. The price to intimidate me is a lot more than YOU or anyone else can afford, let's put it that way. The price to get along with me is.....FREE. And it is time you and certain others got a solid grip on that. And when I said "get along with me", there are no other strings attached. Deal straight, and we'll get along.

And another thing..... you may as well learn on behalf of the silent majority.....is SPEAK FOR YOURSELF! Play the gang game on me and I'll slap your jowls into vibrating like a harpsichord. No if's, and's, or's, or but's.....

Running a close second to my loathing of leveraging business against me is the vain attempt to speak for others, to wit:

>.....Those of us who still have some respect for .....

WHO is this "us", David? Who empowered you to speak for them? Well, you just understand that I don't buy it, even if you do feel free to speak for others. I'm going to listen to YOU; not some hypothetical "them". You just speak your own mind and leave it to others to speak theirs, if they have one, and if they feel like it.

Now all that said and done.....you want a quality newsgroup? Don't lay its failure on me. And don't dictate terms to me. This is not a neighborhood where one person's fireworks can burn another's house down. You just live by your terms and leave me to live by mine. I cannot possibly deprive you of any rights and entitlements here in virtiuality, nor.....on a hobby level, can you deprive me of mine.

But, oh hell yes, you *can* get to me via my livlihood, huh? And when you can't get to me in any other manner, you go for the juglar. Guess what? I have a cast-iron juglar.....

So don't jump onto the business leverage bandwagon thinking that will intimidate me. It won't. There is absolutely nothing in or about you that can leverage me to ANY extent aside from one thing: - are you ready? Grab your mouse and prepare to COPY and PASTE to a text file:

Straight, above the table, clear, well-focused, articulate discussion.

THAT and only THAT has a chance of getting through. I will always listen to and consider straight talk. Anything other than that is not even negotiable, much less "reasonable".

You want the problem solved? I'll help you solve it. But first, it has to be identified and laid out on the table. Just WHAT do you see as THE problem? Would it be any different if I were JUST a plain old hobbyist? Sure it would! Duff, Mackey, Alexander, and Boe would have to find another target for their aspirations. THAT would be THE difference, but the problem would still be there. It's ALWAYS there.

Go to ANY other newsgroup or network forum, and you will see personifications of Duff, Mackey, Alexander, and Boe......and an ebb or tide of a brouhaha. It ain't gonna change, David. Not the manner in which YOU attempted above. And maybe not in ANY manner, for all I know. Definitely not by the brand of cockalorum you brandished above.

But here's a deal for starters:

1. I don't leverage your business and talent against you. Don't you ever do it to me.

2. I don't speak for you or others; don't you speak for me or others.

3. I don't attack you; don't you attack me.

4. I don't change your ways; don't you change mine.

5. Get emotional over your wife; not me and/or mine. I will get emotional over my wife; not you and/or yours.

6. Eat off your own dinner plate and I'll eat off mine.

7. If, by some weird chance, one or the other of us happens to step on the other's toes, despite adherance to the above, then we sit down and straight-talk it out.....here, if appropriate, or by e-mail if more appropriate there.

Howzzat for starters?

> blankers in rigs this price range that were any better..

The Kenwood TS-50 noise blanker works, and the Ten-Tec Scout blanker
is superb. The other blankers are ineffective, save the mediocre one
in the Icom 706, according to QST reviews.

Oh, I'm so sorry. I didn't realize there was a rule specifying that I could only be active on the CB'ERS or the HAM OPERATORS newsgroup, but not on both.

Considering that I'm both an active CB'ER and a HAM OPERATOR, I would say that I am right at home on both, no?

Jon - you are assuming that your neighbor is "out of line." He just might be operating entirely LEGALLY. Maybe THAT'S why the FCC will not get involved in your case.

It's Neighbourhood Public Relations time, Jon. Get to know your neighbor. See what his hobby REALLY is. See if you two can coordinate your schedules...if properly addressed, you might find him to be quite receptive to your concerns.

Jim,

Great article. I could easily get behind your proposal. I will
watch (as you should too) the cries of heresy on the
part of the PRO-coders who still refuse to acknowledge that
there is more in this world than CW.

The other possibility will be that they (pro-coders) will do what they
often do when aced with a reasonable proposal...they'll ignor it.

Cheers,

Bill Sohl K2UNK

>really read the constitution, and what it says about freedom of
>speech.
Here is your misconception. Freedom of speech does not apply to FIDO,
never has, and most likely never will. In FIDO, the moderator is god
of the echo, and a user is there at his acceptance.

That is one of the concepts that FIDO Echos was founded on.

>Are you stupid or do you just act that way? Freedom of speech does
>NOT even pretend to extend to FidoNet echoes. By definition, and
>by Policy, Fido echoes are moderated and rules are required, and
>users have to obey the rules. Or else..... Very simple.

And here, it is put very simply, and to the point. FIDO and the
Internet is very much different. Like life, one plays by the rules.

> If you haven't decided who is out of line here.. I hope this
>helps.

I have. I certainly hope it does not appear to be a flame, but you are out of line on two points.

1. FIDO moderators can do whatever they want. Your comments about the constitution, etc, have no place.

2. Bringing the FIDO problems to the newsgroups.

And I am out of line for continuing them.

Have a great day Guitar man. I hope you take this in the way it was intended, and not as a flame.

Message-ID: <01bbf064$b5866420$36229bcf@kn6dv.qnet.com>
Source record: 209221

I have a Icom 775DSP and a Icom 706.
Both have the acc. Plug # 1 and 2.
I am using pin # 3 of the acc #2 to switch my amplifier (with the Ameritron ARB-700 relay buffer)
using pin # 3 of acc plug1 to swath the radio TX on and off from the computer via a level converter.
I am using this future for RTTY (I am using RITTY by K6STI)

Here is the problem I am having.
As soon I connect acc plug #1 (the one from the computer level converter) the amplifier switch on, it does this even with the level converter disconnected from the computer.

I also have tried a different relay buffer for the amplifier but the same thing happens again.
So far I have tried anything I could think of an no result (It drives me nuts) I even build a second level converter.

Any help would be appreciated.
Thanks 73 Will, KN6DV

>It does? What does "25 kHz above sub-band edge" mean to you?

I admit,I didn't see that part until someone else pointed it out to me. That's because it was far less pronounced than the recommended frequency list. And, I also note that one recommended 10 m freq is in the tech+ phone band. So a mea culpa on me for a small oversight,

BUT nobody has yet to give a reasonable explanation as to why special events stations and many contest frequencies are in the general subband. If only all the energy used by some (not all) to flame were used to educate, we'd all become a whole lot smarter.

>
>=======================
>Paul J. Piercey VO1HE
>=========================

(Paul's comments were extensively snipped in order to keep this to a
reasonable size, if you wish the read his full, detailed posting please refer
directly to it.)

Sorry Paul.
RAC does not make allocations any more than the ARRL does.
Industry Canada makes allocations just like the FCC, and RAC makes suggestions
in their *band plan*

I think the band plan is admirable, but it is not part of the Radio Amateur
Examination - new hams are *not required* to know it even exists, let alone
follow it; so they memorize the legal rules because they are not only
examinable, but far far simpler. Thus we get people jamming repeaters - not
maliciously but simply because they do not realise that the frequencly they
chose for simplex is a repeater input frequency. I just finished listening to
a two hour net in Montreal, which was subject to almost continuous QRM from a
group using a repeater input as a simplex channel.

If only the RAC plan had some teeth - but it's just a suggestion so let's be
honest and not try to pretend it has some legal standing.

73,
Dave

Well if you have any small kids around you could take two tall garbage cans with the bottoms cut out, tape them together bottom to bottom put in hole to protect against side cave ins. At this point the cans should stick above the ground about two and a half feet. Tell the kid you need the hole deep enough so the cans are flush with ground level. Give the kid a garden troll and bucket and I'll bet it takes the kid less time to dig those two and a half feet than it took you to get the tower out of the ground. Just one idea... Merry Xmas

Hey, thats sounds much like my shack. Well, ok it's not really a
shack. Just an Alinco DJ-582_H ht, a few MFJ meters. Hope Santa brings
more stuff.

a >funny way of screwing up communications HI.
==========

Paul;

Sorry but words do not screw up communications, their misuse
does. I based my interpretation of the word 'allocation' on

that used by the ARRL. To quote their handbook.

"FCC subband allocations for US amateurs." and the note in
the ARRL HF Band Plan for Considerate US Operators states
"They are in addition to, and subject to, frequency
allocations and *subbands* defined by FCC regulations"
You will note that the ARRL goes to great pains to point out
that the allocations, including subbands are made by the
FCC. Note also that the FCC allocations specify not only
the grade of license but also the modes permitted.

> and the recieve audio is better to. Thats my two cents worth.
> 73s

Tim,
I couldnt agree more. I own both the 706 and the 70T. I've owned the
DX70T since mid 1995 and the Icom since late 95. After using both
extensively during the past year, I think the 70T is a lot more radio
as far as HF goes. I enjoy CW DXing and I've used both rigs side by
side on a 2 element quad in the midst of some nice pileups.
I've also used both rigs on vacations throughout Asia.

I must say that the Alinco is BETTER ON HF than the Icom...even when the
Icom is equipped with the 250 HZ FL101 narrow cw filter. The Alinco RX
is better...the TX on CW QSK is much better on the Alinco too. I also
find the user interface of the Alinco to be better than the Icom.
Finally, the Icom runs very HOT, especially in the hot/humid southeast
Asia climate. Alinco needs to add a cw keyer and VSWR meter. Otherwise
a winner.

I like the all-in-one feature of the IC-706, but to be honest I use it
more as a 2M/6M allmode rig than as an HF rig. The SSB audio is not
nearly as hot/clear as the Alinco.

In contradiction to Piercey's viewpoint, Holford's statements sums it up
entirely.

> Bandwidth is allocated by international agreement and is federally
> regulated.

If Bandwidth is allocated by international agreement in the amateur bands,
would Piercey be kind enough to state what agreement that is? If I may be so
bold to state that there is no such agreement (other than to
designate a particulate amateur allocation as a maximum usuable
bandwidth, which has been done in the bands above 70 cm.) However, Piercy is
quite correct that the bandwidth restrictions are federally regulated.

THE COMPLETE RF TECHNICIAN'S HANDBOOK
------------------------------------------------------------------
(Published by Howard W. Sams, Inc.)

"The Complete RF Technician's Handbook" is THE book for the radio
communication's beginner, student, or experienced technician, and supplies
priceless information on not only wireless fundamentals, but also the
advanced concepts vital to a successful career in RF communications.

------------------------------------------------------------------------
-------------------------
***Included are over 400 informative ILLUSTRATIONS and tables***
------------------------------------------------------------------------
-------------------------

The handbook includes everything a technician needs to know in real-world
RF electronics -- from the fundamental concepts to the more advanced
explanations of modern ANALOG and DIGITAL RADIO circuits and modulation
methods. Furthermore, operational instructions on RF TEST EQUIPMENT, as
well as identifying proper and improper signal waveforms, and AM, FM, PM,
and SSB theory are included. In addition, transmitter and receiver testing
methods and TROUBLESHOOTING TECHNIQUES are solidly covered.

>A neighbor of mine has a ham or cb radio, and his transmissions come
>out over my stereo, telephone, clock radio - anything with a speaker.
>The FCC won't do anything about it.

Yeah, and that's a pity. The FCC has the authority to set RFI susceptability standards, but they refuse to do so. So the makers of consumer electronics continue to save a few cents by leaving out the filtering their equipment needs to avoid becoming a radio receiver. You didn't buy your phone to be a shortwave receiver and you didn't buy your TV or stereo to be a shortwave receiver either. But that's what they've become because the manufacturers were too cheap to build them right. You can fix them, and it usually doesn't cost much, nor is it hard to do, but you shouldn't have to do it. The manufacturers should be made to do it right the first time.

>I know there are filters you can put on your telephone to block some
>of the interference. Is there anything like that for stereo
>equipment?

Yes. There are three basic ways RF gets into stereo equipment. The most common way is via the speaker leads. These act like an antenna at frequencies where hams and CBers operate. The signal goes *in* the stereo outputs, gets rectified into audio and that comes back out to the speakers. If you wind the speaker leads a few times through a ferrite core, this will usually stop the problem. In stubborn cases you may need to bypass the stereo's output terminals with 0.001 uf disc ceramic capacitors too.

The second main way the RF signal can get into the stereo is via the power cord. Again you can wind the cord around a ferrite to stop this. Don't try adding capacitors to the power lead unless you are skilled in such work. Do this wrong and you can get hurt. The ferrite choke usually is enough.

The third way the signal may get in is via the signal wires from other components of the system. Make sure all these cables are shielded, and that the connections are clean and oxide free. A product called Cramolin can be used on the connectors to prevent them from oxidizing again. This is usually all you have to do to stop signal ingress from this source. You can usually tell if this is a problem because the interference level will change with changes to the volume control setting of the stereo. The other two ways signal can get in usually aren't affected by volume control settings.

The ARRL has a book about RFI, its causes and cures. It might be worthwhile for you to get a copy and learn how to deal with these problems. You can order it from their website, www.arrl.org.

>6-12 months. So can someone help me out and let me know which would have
>a better RECEIVER.

In general, the ham transceivers will have better all around receivers than the SW receivers. Shortwave receivers are generally optimized for listening to AM shortwave broadcasts, and don't always perform very well for monitoring other services. Those pure receivers which might be better, like the Drake R8, cost nearly as much as a transceiver. So if you think you will get a ham ticket down the road, you'll save some money by going ahead and getting a ham radio now. Not all ham transceivers are good shortwave broadcasting receivers, however, but many of them are. Shop carefully and you won't be disappointed.

I don't know, with a number cheap CB boards, it's possible to get them on FM, not only that, but the channelization aspect, makes it easier to deal with too. Another relatively easily prospect for 10 M FM would be a 2 meter to 10 meter FM transverter. Note that most of the projects require either a receiver with lots of coverage or a frequency counter to be sure. Of course if you build a transmitter or transceiver and put it on the air without knowing exactly where you are, I hope it's an emergency. 73 de n8blk/3 -art clemons-

Jon, first thing to do is go talk to your neighbor. If he is a ham he may
be willing to help you solve the problem. There are various ways of
solving interferance problems. The FCC, at one time, had a free booklet
they were passing out on the subject. Usually the problem has to be
fixed at the stereo, telephone, etc. end. But in your case it sounds like
maybe you neighbor has a problem. If he is using a CB radio, ask him
to try it without his amplifier turned on, and see if you still get the same
problems.

Merry Christmas,
Jim KH2D

What is interesting, of course, is that if the survey had come out in favor
of no-code HF, it would have been pointed to as the ultimate "word of the
people" that the ARRL wouldn't dare disregard.

It's amazing to see how the respect for a given poll differs with the
results of that poll. ::chuckle::

>
> Doug
>

Doug, I think you'll find that once the sunspots start sprouting and
that 10M begins to open again, you'll find alot of the contesting and
special event stations publishing 10m freq's as well. With things the
way they are (propagation wise), it makes little sense to run these
stations on 10m in hopes that a band opening will occur. I remember
working loads of special events on 10 just before the sunspots took their
final dive. Same thing with contesting, DXing and ragchewing..all the
things that make this such a great HOBBY

Hang in there...the fun's only starting

I am selling my Yaesu 767GX for $700. The memory battery was just replaced and was checked out for any technical problems. All were in excellent condition. The radio has a built in antenna tuner, 10 memory presets, Split, options for 2, 6 and 70 meter operation and many other features. I don't have the modules for these meter bands. Yaesu would probably have them. The manuals are also included.I would prefer someone in the USA. Thanks

>Eric.

I am curious on what basis you are making that statement? Is this based on any particular set of circumstances or does it represent what you have heard in general terms?

From what I have seen here at ARRL HQ, we do very much care about the needs and concerns of the newcomer (translate: Technician class, with or without HF endorsement). Several years back, we added the "New Ham Companion" section of QST, basic articles aimed at the large influx of new hams (many of whom are no-code Technicians). We have reviewed many of our potential books and articles with an eye to whether they meet the needs of the new ham. Most of our spectrum-preservation activities have been centered on VHF and up -- the frequencies under the most pressure.

From my experiences at conventions, seeing the interaction of the ARRL Board members and the membership, it is mostly the HF ops who do express their concerns to the ARRL. I urge you to express those concerns to your Division Director. They rely heavily on the direct input from ARRL Members and potential members as they make the policy decisions that set the course of ARRL. The Directors I have met seem to all want to hear more from newcomers and we all would like to see them become more part of the process.

Actually it is not quite that cut and dried. While the HQ staff and ARRL Directors do weigh the input of our Members, we also are quite interested in the input from those who are choosing not to be ARRL members.

>If most new hams joined ARRL and made some noise, you bet you'd
>get more attention.

If those who are choosing not to be ARRL members "made some noise" by telling their Directors why they are not choosing to be members and what it would take to have them become so, they would get lots of attention, too. I think ARRL would be better off for their input.

>
>Gary

Nor I. The entire WTAW-FM 1-1/2" Andrew hard line was bonded to the
main shunt fed tower going up tower accordingly.

I did that job. I didn't do the one up at our sister station in Lufkin. That
one was hit three times on the power lines. Twice the station was totally
destroyed by power line hits that went into the facility. The insurance
company paid off twice on the equipment re-installation.

However, just like a beer joint that burns in Texas, the third time it goes up
in flames the Liquor Control Board will *NOT* renew the license at the same
physical site. I learned that from a girl friend of mine whose uncle ran a
dance hall in Cut and Shoot, Texas..

<Huge temperance engine grin widely from ear to ear>

The third time Dr. Zeus came to visit the Lufkin station, it actually set fire
to the place as well and burned it to the ground.

Insurance company refused to pay, so I am told, and it went dark.

It was a country site installation..

To all radio amateurs

SB QST ARL ARLB101
ARLB101 Dave Coons, WT8W, is new Great Lakes Vice Director

Dave Coons, WT8W, is new Great Lakes Vice Director

ARRL President Rod Stafford, KB6ZV, has appointed Dave Coons, WT8W, of New Carlisle, Ohio, as the new Vice Director of the Great Lakes Division. The appointment is effective immediately. Coons replaces John Thernes, W4ZN, who recently resigned to devote full time to graduate studies.

Coons, 65, is a former US Postal Service employee and served for 12 years as postmaster in Miamisburg, Ohio, before retiring in 1989. During his stint in the US Navy in the late 1940s and early 1950s, Coons taught CW aboard ship. He's been a ham and a League member since 1963. ''It's been a great hobby throughout all these years,'' said Coons, adding that he was ''pleased and honored to be asked'' to serve as a vice director.

Coons is deeply involved in ham radio activities. He's served as a volunteer examiner since 1989, is a past president (two years), vice president and secretary of the Dayton Amateur Radio Association (DARA) and has taught for the past 16 sessions at the HANDI-HAM's Camp Courage. This year at the Dayton Hamvention, he'll chair the communication group. He enjoys CW, is a sysop for a packet node and participates in several HF nets.

Coons said his wife, Rita, supports and encourages his involvement in ham radio. He said he looks upon his appointment as vice director as ''a great opportunity'' to expand on that involvement.

Dave Coons' address is 932 Hedwick St, New Carlisle, OH 45344, telephone 937-849-0604, e-mail WT8W (at) arrl.org.

This sunday, 12-29-96, it's time for CW requirement foes, ONLY, to
call into the Ham Radio & More Show and voice your opinions
for up to 90 seconds, without any interruptions from the host.
Last week, 23 callers voiced their praise of the requirement staying;
so now is your chance to say your piece. A copy of both shows will
be sent to Bill Pasternak of Newsline and the ARRL, so they can hear
what people really have to say.
The toll free call-in line for this show is 1-800-293-5366, open at
5:55pm ET (2255utc).
Show information is below.
Len Winkler, KB7LPW lenwink@goodnet.com
P.O. Box 9219 kb7lpw@kc7y.az.usa.na
Phoenix, AZ. 85068-9219 ARIZONA ARRL PIC

Ham Radio & More Show info at:
http://www.goodnet.com/~lenwink/hrm.htm
http://www.tapr.org/hrm (RealAudio site to hear past shows) (Thanks TAPR)

The Ham Radio & More Show airs LIVE each Sunday at 6:00pm ET,
(2300utc), on many local commercial stations throughout the country.
ALSO: LIVE on WWCR Shortwave, 5.070mhz.
ALSO: LIVE on RealAudio at: http://www.AudioNet.com/radio/business/kbnp (Thanks KBNP)

Also available tape delayed via WWCR Shortwave on Mondays,
at 1000utc on 3.210mhz, and Sundays at 0600utc on 5.070mhz.

Support "WOG", the Written Only General!

That's the point that Andy was making ... the code requirement is THE SINGLE most devisive thing in ham radio ... you beepers see it as a way to maintain some false, self-deluding, self-image of superiority and eletism and use it as a way to keep others out ... you can't stand the idea of dropping the code requirement, 'cause that's the ONLY thing that you have to make you feel superior to others ... to admit the code is irrelevant would be to admit that YOU are irrelevant in today's technically advanced world.

You beepers just can't face the truth ...

A 30 amp 240 volt circuit CAN deliver the same current (30 amps) as a 30 amp 120 volt circuit. 30 amps at 240 volts is twice the power as 30 amps at 120 volts, that's why they are used for higher power applications (amplifiers, stoves, electric water heaters, etc).

Why not? Why share their views only with people who already agree
with them? Not much milage in that. I'm not a believer yet, but I
do have an open mind on the subject of safety for the values of both
voltage and also frequency of a domestic electrical supply.

In this belief system, does safety rise continuously and without
limit as the voltage rises from 110V through 240V and beyond, or does
the curve reverse at some point? Maybe before flashover?

And if there is a reverse in the curve, what is the (least dangerous)
voltage above 110V which such a curve would imply?

Regards,

A new ham doll has been released and it stinks.
It comes in white only and is wrinkled and fat.
When you tickle him it says HI HI, passes gas and dribbles

>73, Mike K6YPB

There are few if any *good* CAT programs for the Icoms, except for
a very expensive commercial one available here in UK.

I wrote my own in Power Basic. It works. It has squelch detect
built in and can scan from an ASCII file, zero and load memories,
but apart from that only does what is already built into my IC736.

Trouble with many shareware/freeware programs is they assume that
every rig has the same rig software address as the writer's and there
is seldom any way of deducing what address the program is using

and/or no way of changing the address anyway. The IC736 can use
a wide range of addresses.

I also had to build my own interface. The CT17 interface only works
in the direction computer>rig and does not have squech detect. A home-
brew interface is very easy to build and cost next to nothing.

Try the ARRL program someone else mentioned, and let us know how you
get on with it.

>>I = E/R
>>
>>If I double the voltage E to 2E while leaving R the same,
>>what happens to I?

What happens to I? It goes to zero because you burned up the curcuit. 220 volt devices do not "leave R the same". The resistance of a 220 device is twice that of a like 110 device. Therefore I = 1/2 that of the 110 device.

Message-ID: <32C01491.271E@concemtric.net>
Source record: 209029

x-no-archive: yes

Feel free to distribute the following to your friends via email!

Greetings 14.313 and 3.894.5 fans everywhere!;

You are cordially invited to the newly established DALnet chat channel, #hamradio14313. Unlike other ham-related chat channels, this one's a FUN place to meet. And, unlike other ham radio chat channels, it's not *mandatory* or even suggested that you use your callsign for your nickname. (Gee, what a fine way for some of the IRC troublemakers to locate your QTH! :^0) You can use it if you wish, though; that's up to you. There are no established times when we meet, rather, it's happening whenever someone signs on. Because it's a new channel, activity is slowly growing, so don't be surprised if it's empty when you check in. Just QRX a while and wait for the fun to begin!

Our policy is this: Herbie Baby Number One! and Big AL is THE Caring Station! We are pro-B.A.R.F./A.R.G. + Stumpjumpers. We find PorkButt offensive and distasteful, disgusting and idiotic. In our opinion, he is an egomanic, a self-centered braggart who's mindset seems to revolve around the most sophomoric, juvenile topics and activities. (Sewer Rats are not encourage to join us, but if they do, and *if* they behave themselves, they will be allowed to stay. We have a very low tolerance for their typically moronic behavior on the ham bands, and we're sure-the-hell not going to put up with it on OUR channel!)

Picture this: PorkButt begins his usual QRM'ing, either on .313 or .894.5, and the band happens to be *really* lousy. You are unable to converse with the station with which he is maliciously interfering. One alternative would be to TX your friend. Another -and better- solution is to "QSY" to #hamradio14313 and establish communication there, with the possibility of making it a roundtable when others arrive! This could be the start of something good, folks!

Need some information on DALnet, the BEST IRC network around? Point your browser to: http://www.DAL.net/ There, you'll find links to server lists, client support, IRC FAQ's and more.
Another helpful site for explaining the basics of IRC is:
http://xworld.infoave.net/basic.html

We look forward to seeing all B.A.R.F./A.R.G. and Stumpjumpers members and friends (SWL's welcome, too, of course!) on #hamradio14313 on DALnet.

vy 73 es hpe to c u,

Kenny Keefer

PS. I highly recommend mIRC 4.7 as a chat client. I was using Netscape Chat, and, IMHO, it is grossly inferior to mIRC.

I have been an amateur for about 30 years. During the pre-mid 80's
most amateurs talked about technical subjects.
More recently most of the amateur, packet channels, have been buy and
sell and making contacts.
I have been reading the rec.radio.cb because the questions posted are
more like amateurs used to communicate about pre-80's.
The cb forums are a lot like we used to talk about 20 plus years ago.

Well, Dave, such happiness is unprecedented on rec.radio.amateur,
but is it the holiday season after all, so I guess we will all permit it.
:-)

Actually, I wanted to take this opportunity to thank those who offered
their support for most of what ARRL does. I feel the same way; I agree
with most of it, but not all of it at all times. I have seen a number of
people post anti-ARRL sentiments and was pleased to see the other side of
the opinion spread get some press. The very newcomers we have been
discussing in this thread will often determine their opinion of ARRL from
the opinions of others. I was never comfortable seeing only the bad side
of ARRL discussed on this forum, thus giving an unbalanced view of what
people think.

A warm Happy Holidays to all from ARRL HQ,
Ed Hare, KA1CV
ARRL Lab Supervisor ("Lab Dad")

What `device' is this? Your badly trimmed quote from Gary's posting
originally had a human body as the load and not an appliance which
has been adapted to operate on a different supply voltage.

And also, for the constant power device in your own example, the load
resistance must be made to be FOUR times and not just twice as you
calculated (or guessed?). If you just double the resistance then you
will only keep the current constant not the power. The power will
actually be double and not remain `like'. (V*I = P and 2V*I = 2P).

Let's turn that around for a minute, Squiggy. You can't stand the idea of keeping the code test, because it makes you feel inferior to others. To admit the code is relevant would be to admit other hams are relevant in todays world, and you have already shown us how you feel with your constant 'Yackers, gamers....' etc. comments.

But anyway, it's Christmas time, so let's not argue. As 1996 draws to a close I would just like to thank you for presenting your views on the no code/code debate in this forum Squiggy. Your attitude toward ham radio, and your ideas and the way you have presented them here are the best argument that I have seen for keeping the code tests.

Eric KC5WCP wrote: "I just smile and keep in mind that those dinosaurs will eventually die" and then attempted to cover the evil intent of that comment with a softer "That's not the same as wishing they'd die."

Those two statements seem contradictory, Eric. Suppose, just suppose, that both your parents were OT hams and worked only CW. And suppose the day of their passing a Tech came up to you and said "I just smile and keep in mind that those dinosaurs will eventually die." Now your statement has been thrown back at you in a context very close to you.

Don't you see how mean-spirited you and others have become in regard to this policy debate? Very shameful.

Hi Jon
You have received a lot of good advice from the other. I am only be
reflecting on what they suggest.
One thing I might add though is to always maintain a good rapour with
the operator of the station that is causing the problem.
If you approach him/her nice and politly he/she may be willing to help
you and may even with willing to absorb some of the cost or help you
with the problem.
If the two of you get off on the wrong foot he/she could get tougher
to deal with.
Stay on good terms with the operator.

Greetings and merry christmas and happy new year Scott
I have an amateur radio licence, however so far I have been rather
reluctant to give it over the internet, except in my web site.

With regard to nicad batteries. The responce previous to me was quite
good. I am also in the broadcast industry and have maintained nicad
battery belts for the past several years.

Nicads are enough to test anyones ability.

I might, however, offer a suggest that 'might' work, and it is a big
might.

Measure the battery voltage to see if all the cells are at least up to
voltage.

6 cells should give around 7.5 volts, for example.

If you can open the cell pack measure each cell to see if it is around
1.2 volts.

I have discovered that shorted cells come in two varieties. A shorted
cell can be literally zero volts or it can have a very small voltage,
around .1 mv. I have been somewhat successful at brining up cells
which had .1mv. You would need a digital meter with about 5 or 6
digits after the zero.

This takes time. A low current source to start with and increasing
the current as the cell responds.

If the cell is literally zero, it is a toss out.

If you can't open the cell and the voltage appears OK, try giving them a slow charge of about 5 percent for several days.

If that doesn't work you may have to toss them.

When on 10 meters, check your swr. Don't assume that the autocoupler
is working. You might also check the swr after the coupler, many
can't handle swr's about 3:1.

FCC Delays New RF-Exposure Rules

Just in time for Christmas, the FCC has postponed the date for hams to comply with the new RF-exposure regulations from January 1, 1997, to January 1, 1998. The ARRL was among those requesting the delay. The League said that the additional time was needed for the FCC to draft implementation guidelines and for amateurs to use them to comply with the regulations (released on August 1, 1996 as ET Docket 93-62).

FCC Report No. DC 96-112 announced the amendment of the rules to extend the transition period for licensees to determine compliance with the new bioeffects requirements for RF transmitters. The League obtained a copy of the report just before noon on Christmas Eve.

The time extension to January 1, 1998, will allow changes to Amateur Radio operator examinations to be made along with routine revisions between now and July 1, 1998, rather than requiring hurried special revisions. Among the reasons for requesting the extension was the desire to permit licensees to make a more orderly entrance into this new area, to allow time for information to be promulgated to hams to ensure that they have the information at their disposal to comply with the new rules, and to allow time for appropriate questions to be inserted into the question pools for the various amateur license exams.

In Report No. DC 96-112, the FCC said it disagreed with those petitioners who suggested that the time extension ''will have significant adverse effects on public health.'' The entire text of Report DC 96-112 may be found on the ARRLWeb at http://www.arrl.org/fcc/dc96-112.html (or click on What's New or RF

Safety News).

And, to all, a good night.

Jim Kehler wrote:
>
> some attention. Are you a CODED ham operator, or one of the other kind ?

Jim,
I understand this was a response to a flame, but I personally take offense at being considered "One of the OTHER kind..."
At this point in time, I am a no code tech, but if Amateur radio is what you CW guys are making it look like here, I'll gladly let my license lapse and stay the hell off any ham band for fear of being considered a bigoted, arrogant old fart.
I got in to ham radio for the enjoyment of the hobby. For years I had wanted to get my ticket, but months upon months of study with CW tapes and books didn't get the CW into my head... I had finally got the chance to join what I thought was a very amicable, polite group of people when the no-code came along, and I got my ticket. I have found the majority of ham radio operators to be very polite, courteous people, but then every so often, I find one making comments like yours that give *ALL* hams a bad rep. Seems the "Ole' Boy Network" is alive and well and is trying to keep any new blood out of "Their Bands".
I don't think the CW should be eliminated, nor do I think there should be more classes available without the CW than the no-code tech. I feel the no-code tech is a perfect way for people like myself, that may have trouble learning CW to get in... It has been through my Ham contacts with my No-Code tech that I have been able to find a method of study for CW that seems to be working so I can upgrade and enjoy the benefits CW has to offer.
I wouldn't buy a CB radio to keep in my vehicle in case of an emergency just because of the bad name it's users have given it over the years.
If the Amateurs keep up making themselves look bad by insulting everyone that doesn't have their level of skill, then I'll be damned if I'll have any part of the Ham bands either.

Happy holidays,
Dave

You are using the same argument to try and relax the test for ham radio as is being used through American society regarding every rule/law we have. Here are a few examples;

I don't like guns, outlaw them.

I want to run nude down Main Street, why not, who does it hurt?

Why should I need to take a test to drive a car? I can drive a car just as well whether I take a test or not. Taking a test does not make me a better driver.

There is no good reason to lean math, I can do it on a calculator.

There is no good reason to learn to spell, I have a spell checker on my computer.

There is no good reason to work hard at my job, I get paid the same whether I do things that the boss will never know about, just because it is the right thing to do.

There is no good reason not to eat dog and cat meat.

There is no good reason to learn to speak English to live in this country, when I can't get a good job I will say I am not liked.

There is no good reason why a police officer should be forced to wear a uniform, it is uncomfortable and hot in the summer, shorts and a tee shirt would be better.

As you can see, we could go on and on. I keep hearing that there is not one good reason to keep the code requirement for a ham ticket. Name one good reason why we SHOULD NOT keep it.

The fact that THAT IS THE WAY IT IS, should be good enough. There are lots of good reasons to learn the code, the only reason not to learn it is that you don't think you should have to. Part of being a ham is knowing the Morse code. You can't be in the French club with out wanting to speak French and you can't be a real radio "HAM," note that I did not say "radio operator," without learning the Morse code. It is a tradition. It is part of ham radio.

You should learn Morse code as part of getting your ham ticket for the same reason you should know how to add without a calculator. You don't have to know, but it is a good idea.

By the way, why should I need to know how to read or right to to be a ham? I don't need it to use phone bands.

Why have a test at all? That is what you are really saying. You don't need to take a test to talk on the radio, you just need to know how to talk.

Getting rid of the code test is just step one in the CB operators take over of the ham bands. The next step is to get rid of testing at all. Why have ham radio? We have the phone company and I don't need to take no test for that.

Why should

Since there's no edition of The ARRL Letter this week, we are issuing this special bulletin regarding this issue of high interest to the amateur community. Thanks and Season's Greetings.--Rick Lindquist, N1RL

FCC Delays New RF-Exposure Rules

The FCC has postponed for one year, until January 1, 1998, the date for hams to comply with its new RF-exposure regulations. The ARRL was among those requesting the delay this fall. The League said that the additional time was needed for the FCC to draft implementation guidelines that amateurs could use to help them comply with the regulations--released on August 1, 1996 as ET Docket 93-62. Among other things, the regulations would require hams running 50 W PEP or more to conduct "routine RF radiation evaluations" to determine if RF fields were sufficient to cause human exposure to RF radiation levels in excess of those specified in the proposed regulations. The ARRL also has asked the FCC to reconsider the 50-W threshold, but the FCC report (DC 96-112) extending the compliance deadline did not address that issue.

The FCC announcement--which the ARRL obtained just before noon on Christmas Eve--noted that more time would be needed for affected licensees to determine that they comply with the new requirements. The extension also will allow required changes to Amateur Radio operator examinations to be made at the time other, routine revisions are made between now and July 1, 1998. In announcing the extension, the FCC said it disagreed with those petitioners who suggested that the time extension "will have significant adverse effects on public health."

Since the FCC announced the RF-exposure regulations, the ARRL has worked with technically knowledgeable volunteers to assist the staff, the RF Safety Committee and the FCC in coming up with a workable ham radio approach toward RF safety. ARRL Laboratory Supervisor Ed Hare, KA1CV--the ARRL HQ liaison to the ARRL RF Safety Committee--has spearheaded the ARRL's effort. "The ARRL is very pleased that the FCC extended the compliance date," Hare said. "As all parties involved tried to fully understand the new requirements, it soon became obvious that neither the FCC nor the ham radio community was ready for the January 1, 1997, implementation deadline."

Hare said the delay will give both the FCC and hams more time to better understand the implications of the rules and will give hams an opportunity to evaluate their stations as the regulations will require (see "The FCC's New RF-Exposure Regulations," QST, Jan 1997, p 47).

The entire text of Report DC 96-112 may be found on the ARRLWeb at http://www.arrl.org/fcc/dc96-112.html (or click on What's New or RF Safety

News). See Happenings in February QST for additional information.

And, to all, a good night!

4553. www.hamradio-online.com: FCC postpones RF safety rules until September 1997

The FCC, respondig to numerous petitions filed by the ARRL and other organizations has postponed implementation of the new RF safety rules until September 1997. Under the new rules, Amateurs must certify the RF safety of their stations if they operate at 50 watts or more output power.

>Christian "confused" Leibbrandt
>Amersfoort, Netherlands

If you have a CEPT class ONE licence (i.e. allowed to use HF) then you
should prefix with M0/

If you have a CEPT class TWO licence (144MHz and above only) then you
should prefix with M1/

73 and the compliments of the season to all,

>>while 50 Hz is less likely to. So even though your body draws twice
>I've heard this too, but I read it in an article. It's probably correct.

Hmmm. First I've heard of that, but I suppose possible.

Something else I've heard suggested is that the more violent
involuntary reaction of the muscles to the higher voltage is more
likely to throw you clear of the high voltage. Don't intend to test
it either way, I've already tried 400V DC<g>..

>But I've also heard that 240 V is safer than 120 V, because the current is
>less, not greater. This is because the load stays the same. Also, it's
>the current that kills, not the voltage.

But if the load stays the same (and from what I read, the resistance
of the human body is more or less constant), then the current doubles
at the higher voltage. True, there's less current available from a
240V circuit, but it only takes a few milliamps to kill.

Absolutely, and over the more fatal paths (through the chest) it takes
a lot less than 1/2 amp. Someone else cited 30mA, and that figure
sounds right to me.

>technically advanced world.

Because I am a CW user, you call me false, self-deluding, with a self-image
of superiority and elitism. Snap out of it. Take a pill, Call 911,

What are you talking about. The code is still relevant. Have you actually
listened to what is going on on 80/40/30/20m CW? I doubt it. There is plenty
of activity. It's still the simplest way to communicate and uses the simplest
circuits. It's pretty damn popular world wide. Eventually, it will go out like
AM did, with only a few users operating in the mode for nostagia purposes,
but not for quite a while.

As a CW user, and as a human being, I don't feel superior, better or more elite
that anyone else. You are the one with the superior elitist attitude. You
really can't stand it that even some 7yr olds can copy code better than you.
It really bothers you doesn't it? People without college degrees can copy CW,
more proficient than you. What a shame. Does it burn you up to picture Jim, out
in Guam, running DX pile-ups, or Jeff sitting out in Hawaii with his homebrew
CW rig happily making contacts in a mode you can't understand? Does it bother
you that one of my favorite activities in the hobby is waiting for conditions to
improve so I can contact Jim or Jeff, or whoever using my beep machine. It
sure looks that way. Your only a legend in your own mind. And calling other
people names is the only way you self-perpetuate that myth.

>You beepers just can't face the truth ...

And that's the truth. Beep Beep.

God, how many times do we have to debuk that myth. If CW
did as Dave suggests, we'd not have the some of the bozos
we do on HF now.

Additionally, the responsibility of testing is not to insure an
interest level...it is (or should be) to test for minimum
requirements consistent with the governments role in regulation.
Anything beyond that is for religions and clubs to take up.

Same old, same old. I have a 2M mobile every day and I guess
we live in significantly different areas because there is no more
problem on 2M than anywhere else here in the TRI-state area
(NY,NJ,PA).

Right, those that oppose CW testing should, for the good of ham radio, just shut up and say nothing. Sorry, I don't live my life that way. And, just why do you suggest working within the system? That IS exactly what we are doing. If you think otherwise, I look forward to seeing your comments as to how/why we are NOT working within the system.

What good is CW? The people. The attitudes. Listen for a while on some of the CB transplant frequencies on 80 M such as 3894.5, 3901, etc. I NEED to go to the CW bands to escape this trash. You won't find vulgar, profane, immature no-coders, alcoholics and loosers on CW. The attitudes are different. If you care enough to learn and perfect CW, you will probably care enough to NOT behave like the jerks on 3894.5. CW is the great equalizer, the great filter. It filters out all the children and rif-raf, and provides a sanctuary of sanity where good people can treat each other with respect. The phone bands? I hope they're the first to go in the WARC frequency auctions! And they probably will be, considering the uselessness and embarasment of what transpires there now.

Excuse me Dick, but just where do you see any disrespect in my
comment. I offered no disrespect for the poll, what I said
stands...the poll does not, in and of itself, constitute a compelling
technical reason to retain CW testing.

What this poll (and any other) does is provide an indication of
the OPINIONS (i.e. the political climate) of those being
polled.

Source record: 209088

Gentlemen;

Myself not being a ham have been reading the pros and the cons of the discussions and also keeping up with the technologies that are unfolding every week it seems in the world of radio. And I find myself siding with the no code. Stop and take a look around at the advances in the equipment that is now on the market and the equipment that is on the drawing boards. Morse code was devised at a time when the equipment was nowhere near the caliber of what is avalible today. Most of you who are advanced class or extra class have been into the hobby for how long. I feel as though if you could you would want the hobby to die out with you when you die.Is that fair to all who could and would like to be able to partake of this fascinating hobby to be put down and out because of a few people that think because they had to when they started everybody else has to and if they can't tough. Or if they go and pass a no code test restrict them to a certain set of frequencies. How selfish can you get. I often wonder how many of the young today would find this a really neat hobby instead of gangs or drugs or whatever. You sit back and say to yourself rightoues self that you had to so every body else has to and because of that attitude some very brilliant young minds are lost to your hobby . You say to yourself that your ranks are thinning and don't know what to do. How about opening the door to all who have the knowledge and the desire to carry on the hobby and not trip them up with something so archaeic and antiquated as morse code. I know that you antiques of the airwaves will come up with all sorts of comebacks and reasons not to do away with the nonsense but do any of you have the guts to come up with reasons to do away with outdated ways and open the door to all who want to pursue the hobby without having to try and learn something that in 2 years or less will be nothing more than history. If not , when all of you who cling to the "old ways " finally die off then the hobby can be brought up to date and the minds that have been passed over can finally be allowed to pursue the hobby and take it to new frontiers. Those of you who cling to the old ways remind me of my home town and all the elderly who are doing all they can to suppress the young. And I've told them about the same thing when you die the town dies, When you die the hobby dies

Paul Keinanen disagrees that a ham's first h'brew project should be
a (CW) transmitter.

Paul, all the novice ham project books I own (and even those that belong
to the library) contain transmitter circuits. My collection of ARRL books
(all 60s editions) are filled with novice xmtrs. There used to be a very
long wait from the time one passed the tests to the time the license finally
arrived (3 months in my case). During that interval most kept the soldering
iron hot night after night building transmitter, tuner, stringing antennas,
acquiring everything needed in anticipation of getting on the air (the
rcvr was usually commercially-made or else was a kit - xmtrs are much
easier to build than rcvrs).

Is there something about today's new hams that leads you to believe that
they aren't as qualified to h'brew a transmitter than those new hams of
previous generations? Are you trying to say that those of today aren't
capable of doing what those of yesteryear were able to do?

One other note: During that many month wait for the license to arrive,
most sat and *listened* to the bands night after night, gaining insight
into on-the-air operating techniques (and working on their code speed).
Maybe we should bring back that three-month wait.

73, far from my Hawaii home,
Jeff KH2PZ / 7

4569. Dana Yeomans: "Ham bands sound like CB"

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-24 00:00:00 UTC
From: jherman@sierra.NET
Message-ID: <Pine.SUN.3.91.961223222122.19639A-100000@diamond.sierra.net>
Source record: 209093

Dana Yeomans wrote (twice) that the ham bands sound worse than CB ch.19.

Well Dana, which mode are you listening to on the ham bands? SSB?
Digital? CW?

I suggest you tune down to the lower freq'ys on each band and tell
us what you hear from the CW folks. Of course, you'll experience none
of the nonsense one encounters on the half dozen or so freq'ys in the
voice segments. And that you can only provide a half dozen or so "bad"
voice freq'ys out of the hundreds of thousands of kiloHertz we have on
HF certainly sets us far apart from what occures on CB.

Why point your finger at the .01% when the 99.99% are ladies and
gentlemen? Thousands of QSOs occure daily on HF in which not one single
ill word is spoken. How about a little praise for those folks?

73,
Jeff KH2PZ / 7

Holy batshit Batman! Now there is yet another good reason the
pro-coders can't use! Did I say "Good reason"? I meant boondoggle. :-)

The facts are folks that if a worst case scenario would occur, VHF
linking would save the day! And so would packet links. A heck of a lot
faster and efficient than CW.

Well the freq is used for tracking conditions during a storm and is
used to pass traffic to the National Hurricane Center. That is when no
one is contesting on it...

Not ironic Tom, just cute. Still and all not a good reason to keep the
code requirement. In fact I have yet to hear one reasonable reason.
Not to say that you don't find the reasons reasonable, they just don't
hold water folks.
There is not one good reason to keep the code requirement. There are
plenty to keep CW sub bands. But to be required to pass a code test to
use phone is silly.

I am not a jerk. I was deeply saddened by my folks passing. When my
mother die in my arms last year I was not only deeply saddened, but
discouaraged when I could not revive her with CPR. But then again when
your heart explodes through your airway it tends to make CPR useless.
I still taste her blood in my mouth and remember the helpless feeling.
I hope you never experience it.
I was not HOPING the older elitist hams would die, just stating that
they would die eventually and this whole debate along with them.
Do not take my post out of context. Do not attempt to shore up your
position with double speak and intentionally distorting my view.
I said:

"I just smile an keep in mind that these dinosaurs will die
eventually"

Not the same as wishing they would die. As your post implies upon my
character. I am sorry if you took my post the wrong way and
misuderstood my intentions. I wish no person anywhere illwill. Wish I
could say the same of some pro-coders in this group.

Why not take the time to learn the technical side instead of CW? Why not make the test tougher and emphasize operating practice and technical proficiency? What does CW have over these areas of expertise to prevent CB type behavior? And why hasn't CW kept this behavior off the HF bands so far?
> If you don't think that is the case, listen on 2 meters sometime. A

I have yet to experience ANY ill behavior on the two meter repeaters or simplex frequencies in my area. Yet there are a group of morons down on 80 in my area that would make satan blush.
The NO-CODERS around here are a damn sight more polite than the coders. I get more help when it comes to lifting an antenna from the no-coders than I do from the beepers. I can count on a decent QSO from the no-coders. When I try a coder, I get the shoulder cause my call makes me lesser in their eyes. Mind you, there are a few decent beepers in my area, but they actually took the time to get to know me and understand that I care just as much about the proper use of the bands as I do about abolishing the code requirement.

When did 11m become a ham band? And where do you get your numbers?
BTW, CB 11m is a HF band, no license required. However 2m does require
a license and would be a better bench mark for your argument.

REAL ham radio eh? So are you saying that because I don't DX on HF I
am not a REAL ham?
So, no one has ever worked China on 2m. Not possible? It is statements
like these that push me more and more to set up that satellite/EME
array. When I get the QSL card from China I will send you a copy if
your addres is correct in the callbook. It may take awhile, but I'll
do it and I'll do it without code and without HF.

Still, I feel I have a right to use the HF bands without the silly and
outdated code requirement.

KC5WCP
HF is for sissies, try DXing on 2m. Its a REAL challenge!

Hey Jim. Merry Christmas!

How many "other kinds" are there? I can only think of three:

Codeless Hams (those who don't know the code)

Squiggie Hams (those who copy 20wpm CW in their head but never passed an extra-class examination despite 'forgetting more RF theory while relieving my prostrate than the entire combined amateur population of the known universe knows.)

Lennie Hams (those who don't bother with tests at all but just get on the air and operate HF whenever they feel like it anyway.)

Are there more?

KC5WCP (seven@datasync.com) wrote:

: I appreciate the older hams that offer help and do understand that
: they are a wealth of knowledge. Problem is, most of them I run into
: look down upon us no-coders. NOT ALL, most.

Do the old-timers REALLY "look down" upon the no-coders? I mean, what are the facts of the matter? I doubt seriously that it is a matter of "looking down". What would you expect them to do? These fellows have decades of experience and are, or should be, the role models for those that are newcomers. Just because a teacher has far more experience and knowledge than the pupil .... this does not mean that they "look down". If the pupil is themself arrogant and not interested in learning ... (any parallels come to mind here??) ... then it is easier to understand the scorn which may be harbored by the teacher (ie. Old-timer).

Old timers (and teachers) LOVE to work with motivated newcomers. It's not so much the "traditions" and the "good old days" as much as it is the "enthusiasm" that the Old-timers want to see. The enthusiasm comes from the feeling of MAGIC in Ham Radio.

Many of us use cellular telephones and/or make long distance/international telephone calls on a regular basis without giving it a second thought. Those who feel the MAGIC of ham radio know there is no comparison with using a radio to talk with somebody across town, across the country, or overseas. We can FEEL that we (our signals) are reaching out and that we are establishing a direct connection. This is something that many newcomers cannot understand.

Do YOU feel the magic of ham radio, or are you more interested in a particular technical aspect of the hobby?

Regards,
Sandy W7BX (ex-WA6BXH)
age: 44 and a ham since 1963.

4601. IDE hard drives for sale

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-24 00:00:00 UTC
From: LadyRobn@diac.com
Message-ID: <59pp6b$ft0_003@ppp2.diac.com>
Source record: 209175

I have 2 used IDE hard disk drives I'd like to sell together. One is a Maxtor 540 meg and the other is a Maxtor 345 meg. Both are in fine condition. No cables or anything go with them, just selling the drives. They haven't been used excessively like in a server or bbs or anything, just me at home, probably less than 7 hours a day on the average for about 2 years. I think they both have mtbf's of around 50,000 hours.

I'd like to get around $160 for both + shipping, but can be a little flexible. If I can't get something reasonable, I'll keep them. Email me if interested.

That sounds pretty scientific, Roger. Reminds me of the 10 meter after dinner ragchews we use to have:

Station A: I have a new microphone, how does it sound ?

Station B: Awful. Too many lows, no highs, and constricted.

Station C: Sounds OK to me....

Station D: I don't think it sounds as good as your other mic.

Station E: Sounds Great to me.

Personally, I have never heard any Icom HF radio that sounded 'OK' with an Icom stock mic, so I guess either opinons still differ or Icom finally figured out how to make a radio with decent transmit audio. Not that I don't like Icom HF radios, I have four of them, but never could make the audio sound good on any of them without some outboard equalization and a little help from Mr. Heil.

>Doug

Well, Doug, maybe for the same reasons that all extra class CW operators are not in the Novice subbands working CW at 4 wpm. As you advance in ham radio, you will find more things available to you.

Maybe you have a misconception of what a ham radio contest is. A contest is an event that usually lasts 24 to 48 hours, and the object of said contest is to work as many stations as possible for QSO points in as many sections/countries/zones as possible for multipliers. Most CW contest operators can work 3 or 4 stations a minute, and most CW contest operators operate at 25 to 40 wpm. So it shouldn't be hard to figure out why most contests aren't done in the novice subbands. Some ARRL contests give extra points for working Novices/Technicians. So the time differential spent to work people at slower rates is compensated by additional points.

Contrary to what you may have read in the newsgroups, a contest on the ham bands involves much more than turning on the radio and screaming your callsign. There are a lot of ham stations that are dedicated to contesting, and these stations are usually equipped with the best hardware available. Contesters spend a lot of time (an money) on antenna systems. Hams who are contesters are usually very educated as to propagation. They know when they will be able to hear certain parts of the world and they look in the right direction at the right time. Contesters do a lot of homework in the weeks preceeding a contest. They study propagation, they watch all the DX bulletins to see who will be operating from which rare location, they plan stradegies based on bands/propagation forecasts, etc. Computers are a part of most contest stations. Not only for logging, but for propagation modeling, watching the greyline, DX spotting, etc. Contesters are the best operators - if you ever need somebody to pull a weak signal out of the noise, go find a contester. If you ever need someone to pick out callsigns when 80 stations are calling, go find a contester.

Phone rates in contests are usually a bit higher than CW rates. I don't know what the novice subbands sound like on HF in the U.S., but I do know that when I go looking around for a novice or technician in the novice subbands I usuallly can't find one. So since most people who enter contests are looking for the most stations to work, they look where they can find them.

Anyway, Doug. that's what contests are. Some people participate, not from a 'trying to win' standpoint, but just tuning around looking for new countries to contact. If you ever get a chance to visit a contest station, please do. I am sure you will find it very interesting. When I was a new ham, I had a chance to visit a big multi mutli station (multiple operators, on all bands at the same time) in Maryland, W3AU. They even invited me to operate for a while, and it was a visit and an experience I will never forget.

As for special event stations, I really can't answer your question. I have never been interested in working anyone who had a special event callsign commemorating the corn harvest in Iowa, so I don't know much about them. But I would imagine it shouldn't be two much of a problem for them to operate in novice/tech subbands, because the special event stations I have heard didn't seem to be working people as fast as possible.

[snip]
> How selfish can you get.
[snip]
> You sit back and say to yourself rightoues self that you had to so
> every body else has to...

My friend, it really matters not what "self-righteous," "ancient"
29-year old Extra class hams like myself, and all the others who have
spewed endlessly on this topic for months think in the end. The
International Telecommunications Union (ITU) requires that its member
nations (i.e. the U.S. of A.) ensure that users of the HF amateur bands
show proficiency in Morse Code, even at 5 wpm.

EXISTING AMATEUR RADIO OPERATORS DO NOT CAUSE THIS RULE TO PERSIST. OUR
GOVERNMENT, AND THE INT'L RADIO COMMUNITY, DOES.

Therefore, your complaint on this forum is moot. Secondly, by lashing
out at licensed amateur radio operators as some kind of generic group
with homogeneous ideas and 'obvious' conformance to strict stereotypes,
you are misguided in your criticism.

The many opinions unleased on the newsgroups are discussion only for
now. Things may very well change in the future, but your confrontational
attitude is really not the best way to approach the situation -
especially from a layperson. No offense intended, but it's kind of like
when my grandmother - who's never steered a vehicle in her life - tells
me how to drive. You can't possibly comprehend the depth of the subject
by sitting in the passenger's seat (i.e. reading newsgroups).

Does any one know if the ft 8000r will recieve aircraft band?
The specs says it receives 110-550 but says nothing about am for
aircraft
recieve. Like the ft-8500 does. Any comments on either one of these
radios will be gratefully appreicated. Or which duel band has the most
bang for the buck and recieves aircraft band.
Thanks

4615. Expedition mounting woes, part 2

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-25 00:00:00 UTC
From: kd1hz@anomaly.ideamation.com
Message-ID: <59sl52$3um@anomaly.ideamation.com>

I'd like to thank everyone who sent me feedback on HF antenna mounting ideas for my new Ford Expedition. Looks like it is going to be a roof-oriented HF magnet mount of some sort, and only when I'm going to be working HF at that.

In the process of setting up my VHF radio in the truck, I've come to discover the old mag-mount dual-band antenna isn't going to cut it. I was thinking of one of those new nifty glass-mount jobs, but I seem to recall a posting a while back that you cannot use these antennas with the newer "tinted" glass vehicles. This seemingly contradicts what I've seen locally, for almost every Explorer I've seen has the cell antenna mounted on the rear side panel or the rear flip-up glass panel.

Does anyone have feedback/experience on that setup?

Eric, I have grown weary of your repeated comments about where you make statements something like the above. You state or imply that I caused problems on rec.radio.scanner for 8 months. This is absolutely not true. I have told you this & you strongly argue that you are correct.

Well, lets have the facts speak for themselves. I did a search on Dejanews for the "famous" thread I made which started MY part in the issue on rec.radio.scanner. This thread was called:

"Bill Cheeks is an asshole"

If you read in the copies of Dejanews printouts I have attached below, you will find that the initial message was posted by ME on 7-21-96. Then there were MANY follow-up posts after mine. All follow-up posts have "Re:" in front of the thread title above. These posts from that thread end in October. There are no more more after that. July to October is HARDLY 8 months, more like THREE as I have told you

Also, I then did a search of my name on Dejanews. All the rec.radio.scanner posts of the Cheek fued under my name are only in July thru October. (It is unfortunate that it had to even run that long but Bill REFUSED to accept the 3 truces I offered him, until the 4th) Those Dejanews reports are to long to post here but you can see for yourself by searching for my name. Be advised, you will see EVERY post with my name on it rather I did it or someone else mentioned my name for EVERY newsgroup, so pay attention to what you are reading.

> I have done has caused any problems (until mackey showed up with his

You seem to be causing problems by your lack of candor & honesty.

4619. help ft8000r

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-25 00:00:00 UTC
From: James Gualtieri <piper@se-iowa.net>
Message-ID: <32C215BE.37D4@se-iowa.net>
Source record: 208967
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Does any one know if the ft 8000r will recieve aircraft band?
The specs says it receives 110-550 but says nothing about am for
aircraft
recieve. Like the ft-8500 does. Any comments on either one of these
radios will be gratefully appreicated. Or which duel band has the most
bang for the buck and recieves aircraft band.
Thanks

> It wasn't my idea to have a flame war. however, since you seem so keen
> on the point, why don't you check into the on-line archive of newsgroups
> and see what mackey did to rec.radio.scanner for almost 8 months!

Eric, I have grown weary of your repeated comments about where you make statements something like the above. You state or imply that I caused problems on rec.radio.scanner for 8 months. This is absolutely not true. I have told you this & you strongly argue that you are correct.

Well, lets have the facts speak for themselves. I did a search on Dejanews for the "famous" thread I made which started MY part in the issue on rec.radio.scanner. This thread was called:

"Bill Cheeks is an asshole"

If you read in the copies of Dejanews printouts I have attached below, you will find that the initial message was posted by ME on 7-21-96. Then there were MANY follow-up posts after mine. All follow-up posts have "Re:" in front of the thread title above. These posts from that thread end in October. There are no more more after that. July to October is HARDLY 8 months, more like THREE as I have told you

Also, I then did a search of my name on Dejanews. All the rec.radio.scanner posts of the Cheek fued under my name are only in July thru October. (It is unfortunate that it had to even run that long but Bill REFUSED to accept the 3 truces I offered him, until the 4th) Those Dejanews reports are to long to post here but you can see for yourself by searching for my name. Be advised, you will see EVERY post with my name on it rather I did it or someone else mentioned my name for EVERY newsgroup, so pay attention to what you are reading.

> I have done has caused any problems (until mackey showed up with his

You seem to be causing problems by your lack of candor & honesty.

Hi Bill!!!!
and Merry Christmas....

BTW I am thinking of reactivating the Houston Newsline system...AT&T came across with a CHEAP rate for me.....and it cut the cost in half! so I might just put Houston AND Dallas online in 97!

>annimosity to their fellow unwashed no-code hams.

Funny, but I don't see no-coders joining any organizations. They get
licensed, get an HT and operate. Soon they get bored and put the HT on
the shelf and then buy a NINTENDO game.

>and all the elderly who are doing all they can to suppress the young. And
>I've told them about the same thing when you die the town dies, When you
>die the hobby dies

Well, let's start with the fact that I am in the same position as you;
I am not a ham (but I will be as of Jan 27) and have been keeping up
with the CW arguments. Yet I still take the position of the
Pro-Coders. I did own a CBfor a while but what really through the
hobby away was all those who couldn't go a day without abusing some
laws. It really was a zoo. Recently I journeyed over to the house of
my friend and listened in to some 2-meter conversations and they
seemed pretty much the same. I then went over to HF and the people
there were much friendlier, less chaotic, and I didn't here one threat
come out of there mouths. Once I do get my license (I'm aiming for
tech-plus) I will be a strong supporter of CW and the CW-testing. It
really does weed out the ignorant and societies leeches from polluting
the airwaves. It reserves atleast a few frequencies where those who
want to can go for a pleasant conversation with intelligent people. I
am under the age of twenty, so I figure that once those "antiques" die
off I (and all those others like myself) will be the ones who take
there place. (And believe me, there are plenty more just like me...)

My advice (and this comes from experience) is take the time to learn
morse-code. It took me two days of studying and I could identify every
letter and number. Within one week of about 30 minutes each day I was
able to get up into the five-WPM range. It really isn't that difficult
and the price you pay for learning something new (if that's really a
price) is well worth the package you get back.

>the articles I referred to, i.e. that lower current at higher voltages is
>safer than higher current at lower voltages.

You're right that a piece of equipment designed to be powered by
220 VAC will draw half the current of a device of the same power
designed to operate on 110 VAC. But that misses the point. *You*
are *not* designed to operate off 220 VAC, and if *you* come in
contact with 220 VAC, *you* will draw twice as much current as
you would if *you* came in contact with 110 VAC. The only things
limiting current are *your* skin resistance, and the big breaker
back at the service entrance. This is *not* a reason to claim
220 VAC is safer than 110 VAC.

When dry, my skin resistance measures about 100k ohms, so I'd
draw about 1.1 mA if I came in contact with 110 VAC, or about
2.2 mA if I came in contact with 220 VAC. But if my skin is
damp, the resistance drops to under 10k ohms, so I'd draw about

11 mA at 110 VAC and about 22 mA at 220 VAC. If the current passes through the chest, the latter is awfully close to the amount needed to throw the heart into fibrilation, and without immediate treatment, that's almost certain death. I've had to do CPR on a coworker who got hold of 220 VAC and went into fibrilation. EMS got him back when they arrived, but if I hadn't kept him going in the mean time, he'd be a vegetable today if he lived.

Now it can be worse than that. If you *snag* a point of a live circuit, so that the conductor penetrates the skin, your body resistance is much lower (you are 70% salt water inside), and you can then draw enough current to cook yourself. When you contact a live circuit, the muscles convulsively contract, and it is quite common for you to snag yourself on the live point when that happens. I've lost two coworkers that way in the last 30 years. The skin blisters and ruptures, the body *steams*, it is not a pleasant sight.

Never, never, never allow both hands or a hand and a foot to become the circuit path. That puts the current through the chest, and it takes very little to be fatal. When working on live equipment, make sure you're standing in a dry area, with rubber soled shoes, and keep one hand in your pocket, or wear protective rubber gloves. And for God's sake don't *lean* over a chassis so your belly or chest is touching it. That's Russian Roulette of the worst kind.

Make sure there are no live projections in the area that you might snag yourself on if you were to convulsively jerk from accidental contact, and make sure your hands and arms are located so that if the muscles do contract they won't *clamp* you to the hot circuit. Happened to me once, and it was dumb luck that I survived. Hurt like hell too. It took two weeks before I regained use of my right hand. Every tendon in the hand and every muscle in the forearm had been badly strained by the convulsive clamping.

Primary power is nothing to fool around with. It can kill you easily whether it is 110 VAC or 220 VAC. Lots of people get shocked by a brushing contact and live to tell about it, some idiots will even brush a contact with their finger to see if it is live, and they get away with it because their skin resistance is high, but lots of people aren't so lucky, and not all contacts are brushing.

Another serious hazard is the flash burn. If you're working on a live circuit with a metal tool, and that tool shorts to the enclosure, hundreds of amps will flow through it, often melting it explosively, before the breaker blows. That'll flash burn you bad. 220 VAC is much more dangerous in this respect than 110 VAC because the current pulse will be larger, but even 12 VDC will give you a flash burn if the supply can source enough current, IE don't short a car battery.

You should avoid working on live circuits whenever possible.
When you do have to work on a live circuit, *think* first.
Approach it the same way you would a buzzing rattlesnake, IE
with a great deal of respect and caution.

Gary

Needless to say (I didn't see Gary mention it), it is not advisable to
reach into where wires are if you wear rings (like a wedding band). Take
them off and put them in your pocket. The meticulous will take off
watches, as well.

>>Membership in the ARRL is rather like a typical marriage these days. You don't always agree with what goes on, but you don't get a divorce the first or the tenth time you have a disagreement. The ARRL is the best communal voice we amateurs have to address needs and concerns to the powers that be, and like it or not, you have to support the organization and provide your input. If you don't like policy, lobby to change it.
Gary Danaher
AB5RM<<

If the ARRL expects to have a future, they better get with the program and start respecting the views of younger, newer hams instead of being a mouthpiece for the old, pro-code bunch. Their core membership is literally dying off, and those all-important membership dues arre dying along with them. I won't give a dime to the ARRL until they modify their tough, pro-code, head-in-the-sand views.

Dear Mttly1,
That was your first mistake. Reading the garbage here in usenet and thinking it is in any way indicitive of what ham radio is really about. Your second mistake was obviously believing some of what you have read here. Ham radio is like sex. Listening to other people talk about it will never let you experience what it really feels like. If you are REALLY interested in ham radio, I would suggest that you do what is required to get a license and see what it feels like first hand. Once you experience the magic for yourself, I am sure you will see things in a very different light.

Once upon a time there was a little girl named Mary. She went to the north pole to ask santa for a very special present. She knocked on the door and found a BLACK santa doing the misses " in the buck style ". She told santa that she wanted a special pair of panties that would block out her brothers penis but would let her boyfriends pass through.....
Mo Bigsly santa looked at the girl and said...
" Mary, KismaASS ".....Which is now know as X-mas in EBONICS.

To All,

The poll -- actually polls -- conducted were fair and acrate as far as they went. The problem I see is that they did not sample enough of the nations Amateur Radio populice. Nor was there the required "control sample" outside of the ham radio community.

According to a story that we will put to air in about 48 hours, the ARRL admits that of its 17,000+ members, only some 10,000 replied to the poll. It then polled at random another 2000 hams. It made no attempt to poll and establish a "control group" so it really cannot claim that the results are indicative of the majority of the nations 650,000 hams -- nor even of the ARRL's 170,000 members.

If you want an accurate poll, you hire a company like Irving Fields or the like to conduct it. You do both targeted and across-the-board polling and then compare the samples against a pre-determined gradient. None of this was done, so I have to doubt the accuracy of the poll. This is what ARRL should have done, but I seriously doubt it had the money to do it. So, they did the best it could with what it had.

That aside, the ARRL has a direct obligation to politically represent the views, wants, desires and needs of its members. For it to do anything else would be a breach of trust. If ARRL members believe that retention of the Morse code as a requisite requirement for operating a ham station below 30 MHz be retained, then it is obligated to fight for that ideal -- regardless of what you or I might want. Those outside of the ARRL are entitled to their opinion as well, but unless and/or until they become an organized political entity like the ARRL, they are naught but screaming in the wind. Basically, they are venting their collective splean on USENET as an alternative do taking the basic political action needed to give credence to their opinion.

The nice thing about opinions is that we all have one. The sad part is that most of us are just to lazy to do anything other than complain. And thats what this entire discussion has deteriorated to.

I can't compare the FT-840 to the other rigs your refering to but I
can tell you that I am very satisfied with the performance I get from
mine and the price was definately right. If you plan on doing CW, I
would advise adding a 500Hz filter to the Yaesu. The 2.8kHz filter it
comes with is way too wide.

There is a general coverage tx mod for it too. It can be found at
http://www.qrz.com

Whose point? It may be yours but it was not the point of this thread.

This started on Tue, 17 Dec 1996, when Demetre Koumanakos wrote:

> CQ Netters,
>
> Does anyone know the advantages and disadvantages between
> the US 110 Volts and Europe's 220 Volts ??

Safety was raised as an issue and so it was the safety of a European 240V domestic supply that was in discussion, and not the safety of bringing a US style two-phase 120-0-120 supply.

As a European with a 240 volt domestic supply, let me say that our local tranformer is a 415 volt phase-to-phase star arrangement where each house is fed one of the three phases plus the neutral. So we have a phase-to-neutral voltage of (415V / sqrt(3))V which is close to 240V to neutral, and in balance that's also 240V to ground.

Regards,

And you can add me to the list too. I agree with Dave, Dick and Jim.

I also believe that if you are going to demand that an organization represent your view, you first are required to become a member of that organization.

The ARRL is the only game in town right now. All attempts over the past decade to form alternatives have failed. NARA is gone. The ARRC is a one-man "paper tiger." Everyone else is just talk.

You are either on the inside of the ARRL working for change or on the outside throwing bricks that will be ignored.

I find your rhetoric a bit too harsh for my blood. Name calling is
rarely helpful. (i.e. "lazy," "complain" etc.)

I think that there are a number of things that make discussion threads
like this one valuable, rather than, as you imply, the opposite:

1) QST has opted out as a vehicle for lively discussion of ham
political issues. It generally functions solely as a vehicle for
announcing already-decided positions adopted by the League. Therefore,
even rank and file members do not have QST available as a forum under
most circumstances, apart from the occasional letter to QST. (I've had
several of mine published, at least one of which was, to be fair,
contrary to the ARRL position on the issue in question.)

2) The internet does, in fact, get noticed. I call your attention to
the fact that several ARRL officials have taken visible notice of this
discussion. No doubt others have as well.

3) The League is interested in growing its membership, for many
reasons, including legitimacy (it needs members in order to credibly
function as ham radio's representative to outsiders) and financial
considerations (dues are, I believe, its main source of income).
Accordingly, the League *needs* to know what non-members are unhappy
about.

For these reasons, I feel that you are out of line when you charactarize
these discussions so negatively.

I have no idea why you think that.

Firstly, the poll conducted by the League was laughable. It was a fabulously classic example of how not to conduct a poll. It was a self-selected poll, where those being polled had an option of responding or not responding. There isn't a polling expert or statistician in the land who would assign any statistical validity to a poll conducted in the manner this one was. Therefore, the League has no business basing its policy on the outcome of this poll. If it thinks that the code requirement is good for other reasons, that's fine. But this poll was comically inept, to the point of absurdity.

For an excellent discussion of how, and how not, to conduct a poll or survey, see generally UTTS, Statistical Methods in the Law.

resemble real life....TOUGH! The tougher the written test the better.
I would rather study more about theory and operating
practices(something every ham could use a brush up on) than an
outdated mode that I will never use.
>I don't like guns, outlaw them.
I love guns. :)
>I want to run nude down Main Street, why not, who does it hurt?
Never seen me naked have you :)
>Why should I need to take a test to drive a car? I can drive a car just
>as well whether I take a test or not. Taking a test does not make me a
>better driver.
Never drove in NYC have ya :)
>There is no good reason to lean math, I can do it on a calculator.
I used too be able to do advanced trig in my head, but then I had to
make room for CW code and well...
>There is no good reason to learn to spell, I have a spell checker on my
>computer.
Darn tootin buddy!
>There is no good reason to work hard at my job, I get paid the same
>whether I do things that the boss will never know about, just because it
>is the right thing to do.
Actually i do. It makes me feel good to excell
>There is no good reason not to eat dog and cat meat.
My cats would kill me if I did.
>There is no good reason to learn to speak English to live in this
>country, when I can't get a good job I will say I am not liked.
I am very well liked. Guess that is why they elected me pres. of the
local club. Oh wait, maybe they did that cause I'm the right man for
the job.
>There is no good reason why a police officer should be forced to wear a
>uniform, it is uncomfortable and hot in the summer, shorts and a tee
>shirt would be better.
Very true.
>As you can see, we could go on and on. I keep hearing that there is not
>one good reason to keep the code requirement for a ham ticket. Name one
>good reason why we SHOULD NOT keep it.
1) CW is out dated and useless when compared to high speed data modes.

2) The CW Requirement causes eletist attitudes on both sides of the
debate
3)I said so.
!>The fact that THAT IS THE WAY IT IS, should be good enough. There
are
I wonder if you would say that in regard to Hitlers regime or to Abe
Lincoln, South Africa, child molesters, etc.
>lots of good reasons to learn the code, the only reason not to learn it
>is that you don't think you should have to. Part of being a ham is

>to speak French and you can't be a real radio "HAM," note that I did not
>say "radio operator," without learning the Morse code. It is a
>tradition. It is part of ham radio.
I am a REAL HAM. But I guess trying for my DXCC(no not VUCC) on VHF
just doen't qualify in your book as an effort or challenge. I don't
think I should have to pass a code requirement to access HF.

>You should learn Morse code as part of getting your ham ticket for the
>same reason you should know how to add without a calculator. You don't
>have to know, but it is a good idea.
It is also a good idea to know how to properly handle a fire arm, yet
that is not mandatory. Etc etc etc. I will not bore everyone with
endless examples.
>By the way, why should I need to know how to read or right to to be a
>ham? I don't need it to use phone bands.
I wonder how many illiterates would disagree with you.
>Why have a test at all? That is what you are really saying. You don't
>need to take a test to talk on the radio, you just need to know how to
>talk.
Don't put words in my mouth. I want a tough written test. A test that
will help me to enhance my operating skill, on-air conduct and my
technical skill. Morse code does nothing to enhance any of those.
>Getting rid of the code test is just step one in the CB operators take
>over of the ham bands. The next step is to get rid of testing at all.
>Why have ham radio? We have the phone company and I don't need to take
>no test for that.
I wish this bashing of CB operators would stop. I know many Hams(with
and with out code)that got their start on CB and many of whom still
operate there. These CB freinds of mine are allready taking over the
ham bands. In fact it has been happening for years.
I guess you never keyed a CB before?
Or are you just better than CBers?

The few oldtimers that even talk to me know that I am not only
knowledgable, but willing to learn. I gues that comes from my always
pestering them with questions.
The ones that don't talk to me no matter how courteous I am to them on
the air or face to face have made it clear through channels that it is
because of my no-code approach. Then again, these oldtimers are well
knwon to be so useless that they need someone to change a fuse for
them when their rigs go POOF. they probably figure that if they would
have had to take a real test they would never made it into ham radio.
>Old timers (and teachers) LOVE to work with motivated newcomers.

>attempt to poll and establish a "control group" so it really cannot
>claim that the results are indicative of the majority of the nations
>650,000 hams -- nor even of the ARRL's 170,000 members.

Several points:

1. Wording the survey as to bias its outcome is not conducting a "fair
and accurate" poll.

2. In order to make a judgement about the population as a whole in a
random sample of a finite population, you need about 4,000 respondents.

3. Opinion surveys do not need "control groups" unless you are attempting
to draw a parallel against an outside group (i.e. non-licensed people).

4. I would like for you to explain why you feel a control group is
necessary in this survey, and why you feel that any control group
outside of the amateur population would even have enough pertinent
knowledge about the code/no-code issue to be able to give an informed,
rational opinion.

>If you want an accurate poll, you hire a company like Irving Fields or
>the like to conduct it. You do both targeted and across-the-board
>polling and then compare the samples against a pre-determined gradient.
>None of this was done, so I have to doubt the accuracy of the poll.

I don't see any reason why the ARRL should have done this at all.

Hi everyone.

I have an older IC-20 2M FM rig I dug out of my years of collected gear (just got back into the hobby after 12 years out - glad I kept my ticket renewed!!)

Does anyone have a URL for a web site listing the repeater frequencies for the Puget Sound region of Washington State? Or any local hams that have a list they can email?

Since my radio is crystal controlled, and set up for the old splits and no tones, I don't know if there is any I can even hit anymore.

Any help would be appreciated.

Dave

>I thought that a TNC was needed. If it is true does anyone
>have the pin outs to build such a cable or maybe a source that
>I could contact to obtain one.
>
Yes it's true. The cable has a small pcb enclosed in the 25pin D
connector, mounting a simple limiter amp. e.g. 741. This is powered from
spare lines on the COM port.

The software - HamCom - drives the lines high + and low - for the rail
supplies and it polls a line from the amp. output at high speed. It senses
data present and calculates validity and data value from the results. This
can be code, rtty, hffax, etc.

Regards,

>County's several Amateur Radio Clubs? What do you want to do with your
>Amateur privileges?

>Two Meter? 220? 440? Want to use Morse Code?

Well, I'm not quite sure of what I want quite yet. I haven't really scavanged around much lately. I do NEED a radio though... (see the former part of the reply at this point...) I will be taking the test in January so I won't have much use for one until then. I would like to know what a good radio consists of, what a good price is and what I will need/ should have to begin with. I will have (if I pass, that is...) a tech plus license and will therefor be quite prone to using CW frequently. So I guess I would need some sort of keyer for it. I'll join SOARA as soon as I can for the repeater privileges...

Keep in mind that I am unemployed (student/slacker/leech) so my budget will most likely fall in the $300-500 range for a radio + equipment (whatever people suggest)

>function as ham radio's representative to outsiders) and financial
>considerations (dues are, I believe, its main source of income).
>Accordingly, the League *needs* to know what non-members are unhappy
>about.

The League must balance the needs of members against the needs of
non-members. In some instances these needs will be the same (spectrum
preservation). In other instances, they may be different (code vs no-
code HF license). Unfortunately, what is important to one is not
important to another, so there will always appear to be decisiveness
when looking at things as a whole.

The ARRL survey was not a "self-selected" poll. A self-selected
poll would be where someone puts up a poll on the Net and invites
others to take it.

The ARRL poll was little different than any national opinion
survey. There is always some percentage of people who do not
respond. The key is to send out enough surveys that you still
get a sufficient number back to make a hypothesis test.

>where those being polled had an option of responding or not responding.

Regardless of the poll, you always have the "option" of not responding.
Classic example is exit polling during elections. When you walk out,
a pollster asks you to answer a few simple questions. You can say
"no thank you" and walk away. That doesn't change the fact that the
polling agency is able to make, with a great deal of certainty, a
prediction as to the outcome (i.e. the population opinion as a whole)
based purely upon those who do respond.

>There isn't a polling expert or statistician in the

Unfortunately, neither you nor I (or a polling expert or statistician) has
enough information about the "manner this one was" conducted to make a
determination as to whether or not it holds scientific validity.

Hello all, Tnx for reading.
Looking to buy a good used triplexer for 144/220/440 mhz... between
100-250 W max power would be more than enough as right now I'm at 6W on
2m, my 440 rig is 70, the 220 rig will be 100 and I'll be getting a 2m
Mocom at 35W in the next couple of days.
Thanks,
DAve

I am looking to buy an HF rig. Recently, having posted a request for info
on Alinco DX-70T vs Icom IC-706, MANY responded and I concluded the DX-70T
while it has fewer bells and whistles, HF performance is better. NOW, the
FT-840 price is in the same range as the Alinco.Which one to buy?
Please send me your input on the FT-840 and any comparison to the DX-70T
if any. Also, I am wondering if there are mods for the FT-840. Thanks for
responding. I appreciate the input.

You are absolutely right and I stand corrected. Let me try again. If a
receiver wired for 110 V has 100 watts output to the speakers, it will
draw about 1 amp. A similar receiver wired for 220 V having 100 watts
output to the speakers, however will draw about 0.5 amp. For the same
power out, higher voltages require less current. This was the point of
the articles I referred to, i.e. that lower current at higher voltages is
safer than higher current at lower voltages.

I recently heard of a cable that attaches from you Reciever to
the serial port of a computer which allows CW to be translated
by your Computer for display on your monitor. Is this true?
I thought that a TNC was needed. If it is true does anyone
have the pin outs to build such a cable or maybe a source that
I could contact to obtain one.

Thanks and Merry Christmas

I still think you're in a muddle. The current flowing through a
receiver is not a risk, it is current accidentally flowing through a
person which causes a harzardous shock. And the human body does not
have an automatic power regulator to reduce current at a greater
voltage; on the contrary, the regulation is by Ohm's Law which will
have quite the reverse effect.

I talked to my friend, the extra class conservative the other day about the no code thing. I think riff raff is probably a bit too strong a term and it probably insults people. He thinks (and I do too) that it makes people have a little more respect for the privledges they get with a ham license when they have to put forth some effort to get it. So I think a better way of saying what you said is that CW testing keeps out people who really aren't interested in the hobby enuff to put forth some effort to enter it.

Membership in the ARRL is rather like a typical marriage these days. You don't always agree with what goes on, but you don't get a divorce the first or the tenth time you have a disagreement. The ARRL is the best communal voice we amateurs have to address needs and concerns to the powers that be, and like it or not, you have to support the organization and provide your input. If you don't like policy, lobby to change it.

That depends on how it's wired... I've seen some power companies do some strange things with multiple x-formers, and with 3 phase coming in to a building, there is between 208 and 240 to ground from each phase. I've seen some hams wire things up strangely as well causing all kinds of weird voltages between a single phase and ground!

The response I got from the FCC for a complaint I tried to file on a guy for out of band (way out of any authorized amateur band) and he was running a good 200 watts was: "we don't have the manpower to enforce anymore, cutbacks have us down to a skeleton crew... if he's not interfering with any of your household radios etc, ignore it, if he is, I can give you a number for a company that sells RFI filters..."

FCC is a bunch of bureaucratic idiots! Just like any other gov. agency. Sit and collect a check, but don't raise a finger to do your job... someone might think your a kissass or something if you do!

Righto! we need an ala carte testing program. If you don't think a
topic is important then waive that test section off! I happen to
think AC electrical theory is not important -- so I needn't take that
element! same for Smith charts! Hey, the Oakland school
board had this figured out! they decided English was really
as important as previously thought!

I just wish this idea had existed when I took the Bar and CPA exams.

Some do and good ridance to them. The ones that stick with the hobby
despite the way we are treated by a great many REAL HAMS(as you all
like to call yourselves) are what you pro-coders have to worry about.
That is why i get so many posts to me with outright insults instead of
encouragement or sensible debating.
A good example of how most of the Pro-coders SHOULD behave is seen in
my local ARRL representative. He is an older ham who likes code. The
other day a friend who just got his ticket resonded to his question of
what class license did he hold by saying that he was only a no-code
technician.. Well the wise old man said: "No one is only a no-code
technician, we are all hams and don't you forget that"
And don't you forget that either.

Happy new Year

make the rules and there's no other laws violated or constitutional
grounds to challenge the rules...>>

The Morse requirement will be challenged on grounds of discrimination. Since everyone else in the world has abandoned the code, particularily the US military, it will be argued that there is no longer a legitimate purpose served by requiring it's knowledge for a US government-issued radio license. It will be further argued that the Morse requirement is now an artificial barrier, a "hazing ritual" required for entry, and no longer has any technical or legal justification for being required as a condition of obtaining a license.

No. Wrong terminology. Discrimination, in a legal context, relates to
differentiation among citizens based on certain protected categories
such as race or gender. Not non-knowledge of morse code.

> Since everyone else in the world has abandoned the code, particularily the
> US military, it will be argued that there is no longer a legitimate

You will find that the government would only have to prove it had a
"rational basis" for its actions. If I'm not mistaken, the government
has only lost one rational basis case out of gazillions that have been
filed. Rational basis is very easy for the Government to prove. Court
deference to the government in such circumstances is very great.

No, I mean what I said. The mistake the League made in conducting its poll is a common one. People make this mistake in good faith all the time. For example, in the 1980 Carter-Reagan presidential contest, Carter's pollsters made a subtle error (along the lines that Mike Deignan would make): if someone they phoned wasn't home, they moved on to the next potential respondent. Reagan's pollsters, however, called the same person back later. Carter's people were engaged in a subtle form of self-selected polling. The result was that Carter's poll was off by around 8 points (a huge amount) while Reagan's were pretty much on the money.

It's not the publics' fault. The total budget of the FCC when it was staffed to full capacity was a drop in the bucket compared to the billions of dollars the Government wastes every year on the thousands of entitlement programs, and general waste and squander on behalf of their own self-interests.

Now that a little pressure is being applied by the public to account for all of this money, the government responds NOT by eliminating the waste and squander, but by cutting back on the services the public IS paying for...

Be careful here. You are only allowed to critique spelling and grammar when the errors are made by the anti code crowd. If you criticize a pro coder God-Emperor Kehler will erupt from the Pacific and give you an insulting little name. Worst case scenario his toadies will take up the name and you will be truly be demeaned by being called names.

I passed my code hazing and even beep on the radio from time to time. Despite this some basic flaw in my character makes me continue to think fast code testing is a load of rubish that should be done away with. I do agree with Kehler that it won't happen here so most of my anti fast code testing effort occurs in other venues where there is a chance of doing some good. To make code testing resonable no treaties need change after all 1 WPM satisfies the treaty just the attitude at ARRL need to be changed. If it changes there the FCC will soon follow.

Another fault with the poll (IMHO) is that it failed to ask for
reasons why proponents wanted to reatain CW. That puts the
ARRL on shaky technical grounds in asking for the retention of
CW testing by ALL countries as a result of ITU treating requirements.

Additionally,
Bill P is absolutely correct about the ARRL (assuming they do take
a PRO-CW position). That is why I previously posted the following:

I have proposed
an effort to challenge any position taken by the ARRL that

would sustain continued international treaty requirements
for Morse Code knowledge as a requirement for HF access.

Note, this effort is not targeted at the FCC, but rather is
primarily aimed at making sure the ITU is made aware that
a significant number of USA hams are opposed to continued
CW testing for amateurs in the 21st Century.

No need to reply now. I'll draft a proposed ITU submission which,
when completed, I'll post and you can then comment as
you see fit. Once we get an agreement as to the final form
of the submission, we can then solicit signators for the
submission.

Lastly, this effort, which may go gainst a formal position of
the ARRL is NOT an effort on my part to start a new organization.
I have nether the time nor effort to do that.

Shane, CTCSS tones are usually numbered/identified with a LL (letter
letter) or LN (letter number) type scheme.

Ie: 100.0Hz = 1Z
123.0Hz = 3Z
241.8Hz = M6

There are about 42 odd standardized CTCSS tone frequencies. Many CTCSS
encoder/decoder circuits can not deal with more than 32 different tones
- simply because they don't have enough divider/address lines/aka DIP
switches. If your radio is using the above numbers for CTCSS tone
frequencies they could be totally different on another radio. To
confuse the matter some more, there are several non-standard CTCSS tone
frequencies in use too. I find it best to use the full frequency in Hz
just to avoid any possible confusion. Hopefully your encoder/decoder
with be compatible.

What a wonderful attitude Eric has. Instead of whining, this fellow simply settled down to do it. The complainers should be ashamed of themselves complaining about having to do a little test. It really isn't worth all this noise.

Geez Drew, no prejudice in that URL name...
But it at least gives all those that can't learn the code something to do other than display their 90's welfare mentality. You know...
'it's toooooo haaaard...I can't dooooo it.' so give it to me just 'cuz I want it.
Kinda like giving the quarterback the 6 points when he fumbles on the 5 yard line... he meant to get a touchdown so we should just give him the points anyway.

geez....

It isn't just an FCC requirment as well as supported by ARRL, it is
required by the ITU. (International Telecommunications Union) That
means that every COUNTRY around the WORLD who wishes to partake in
this union, and many do, are required to show that their HF operators
show a profficiency in morse code at 5 WPM. Flaming others (especially
the pro-coders) won't get you anywhere. If you want to accomplish
something go speak with foreign representatives in the ITU or send a
few more letters to the FCC.

EXTINGUISH THE FLAMES! they're really starting to piss me off...

Message-ID: <32e2f22b.21374213@news.wco.com>
Source record: 208939

There are a number of different PL type codes.. Icom, Motorola, and CTCSS. Motorola uses LN (LetterNumber), i.e. 2a, 3Z, etc. Icom uses Icom, where it's simply a number (1-32), i.e. 1 = 67.0 ... 14=110.9, etc.) Then there's Yaesu. I can't figure our their combo 67.0 = 15, 110.9 = 30, etc..

One of the things that has become obvious in the past several years is that most -- though not all no-code Tech's are hams in license only. They are not the traditional ham with a deep rooted interest in ham radio. Rather, they are communicators who want to communicate reliabally -- at minimum cost -- with family and a few close friends.

They are not joiners. They do not join the ARRL or any other national political activist ham radio group. They do not join local clubs. They do not financially support repeaters. To them, ham radio is nothing more than an inexpensive alternative to a cell-fone; and as such they have no abiding comitment to the service.

I used to think that if a carismatic leader came along to organize the no-code Techs that they would be a political force unmatched in the history of ham radio. After several years of watching, I have changed my mind. It will never happen and I now really have doubts how many no-coders would buy and use an HF rig if they were given Extra class priveleges without having to take any test. (What was it that Wayne Green used to say that you could stand on a street corner handing out free Extra class licenses and free rigs -- and get no takers???)

I think we are dealing with a different mindset than ever before in ham radio and in creating the codefree Tech, we have really created a separate "communicator" radio service where current hams who own repeaters are "service providers" providing a public utility at no cost to the public.

Any thoughts???

Well Jerry I tell ya...I post here as a sounding board in the hopes of
finding some intelligent hams on the other side of the debate so that
I may find any holes in my position. There is the ever so slight
chance that I may be on the wrong side of the issue.
But after reading what the code gods have to say for their side I am
pleased to see that I have chosen the right side :) If all the code
gods can come up with is funny little names like SQUIGGY or call
people PANTYWAISTS and term their thinking WELFARE ATTITUDE then I am
quite sure the debate will be short and fruitfull in the real world.

Well, yeah. I don't think that the above is true. When I listen on the 2M repeaters here in So Cal, I hear lots of QSOs with no-code techs involved. QSOs in the usual sense of the word, not conversations with one's spouse about getting dinner ready, and the like.

No-code techs were well-represented during the Jan 17 earthquake as volunteers in our local disaster communications organization. They participate in great numbers in many ham activities around here.

Some of these folks do find the code to be a barrier to advancement. I never have myself, so I'm not sure why. Fact is, many people do. And most of these people would be assets to our dying and greying hobby. Without them, ham radio will die.

I do think that since these people (no code techs) are limited to VHF, their interest in our hobby will be lower, simply because there is less to do on VHF. Unless you are really into hi tech stuff, VHF is limited in its usage compared to HF. Not to minimize its value: VHF is great. But only HF offers long range communications at modest cost.

I think the real lesson about the no code program is the fact that 99% of these chaps are FB ops. They have disproved the "CW filter" theory (to which I once subscribed).

Does 40% of the population still use horses? Do 40% of the engineers
still use 807s? Do 40% of the people that fly do so on an aircraft with
a taildragger?

40% of amateurs on HF use CW for communication. That in of itself makes
it a relevant test.

> Posted for: Jim Charlong - VE1 ALZ/QRP
>
> Send replys to VE1CMR and I will forward all info to Jim! I have one of the MFJ CW rigs with the filter and keyer built in. The
rig is a compromise when measured against a full size rig. However I
have everything in a foam padded tool case - rig, tuner, keys, power
supply, dsp and antenna (dipole).

My rig does not drift a bit! I have checked it against both a good
receiver and and a frequency counter. Maybe I'm lucky!?!

The rig works ok for a few watts. If I can get the antenna high enough
and if there is good propagation, dx into Europe is no problem from the
East Coast. Have worked a few stations in the Carribbean as well.

Overall I'd give the rate the rig, on a scale from 1-10, about an 8.
Good performance, light enough to travel on a plane, easy to operate and
seems to work well. I'd look for one at a hamfest or swap net. The full
price is a bit too much for what you get.

>political activist ham radio group.

This is very, very true. In my state at least we find that a large
portion (if not a large majority) of codeless techs are merely people
who have upgraded from CB radio to amateur radio to escape some of
the nonsense that goes on on the CB bands.

>They do not join local clubs.
>They do not financially support repeaters. To them, ham radio is
>nothing more than an inexpensive alternative to a cell-fone; and as
>such they have no abiding comitment to the service.

I will say one thing about codeless techs, however. I believe that they
are very prone to joining local repeater groups and amateur radio clubs
to support a local repeater that they use during their commute. I have
found, again, that most (if not all) codeless techs that I have run
into very supportive of local clubs, at least with their membership
dollars.

However, I have also found that codeless techs, along with many younger
ham counterparts in other license classes, are less devoted to the
altruistic aspects of amateur radio today that hams of yesteryear. I
believe this is, in part, due to the "family radio service"-ization
of amateur radio, with the 'dumbing down' of amateur licensing a
major cause.

Furthermore, I have to agree with your assessment that codeless hams
do not join the ARRL. Most that I have run into, with some noteable
exceptions, would rather spend their $30 on a local club with immediate,
"visible" results than a national club where all they get is, for all
intents and purposes, a magazine subscription.

>I think we are dealing with a different mindset than ever before in ham
>radio and in creating the codefree Tech, we have really created a
>separate "communicator" radio service where current hams who own
>repeaters are "service providers" providing a public utility at no cost

>to the public.

I have noticed over the past couple of years a greater tendency for local amateurs to use HF frequencies for local groundwave communication. Their rationale is the HF frequencies are less-monitored than local VHF frequencies and they can talk about subjects (such as other hams they think are jerks) without "people listening". I must admit that it is harder to find them on 10 meter SSB than 2 meter FM, so maybe there is some rationale to that logic.

Oh well that does not surprise me. MANY people were upset at Bill
for a long time. So you would be correct to say that ISSUE was
old when you came on 6 months ago. You ARE NOT CORRECT to say
the thread I started "Bill Cheeks is an asshole" was old when you
started 6 months ago because it only started in July (5 months ago)
& only lasted 3 months as indicated by Dejanews.

> Also, it was an opinion on your part and should never have been blown
> out of porportion. However, in your infinite stubborness, you saw fit to
> contest anyone who disagreed with you on this point.

Let's let the facts speak for themselves again Eric. Looking at the 80
responses from Dejanews on that thread, my entries make up 16 of them or
%20. That means that 64 (or %80) of the posts were from other people
posting replies. (if you don't believe me look for yourself) I could
hardly have been contesting everyone with only 16 out of the total 80
entries on that thread.

> > If you read in the copies of Dejanews printouts I have attached below,
> > you will find that the initial message was posted by ME on 7-21-96.
> > Then there were MANY follow-up posts after mine. All follow-up

Why? CW is strictly recreational. It is shunned by MARS, not used by
the Coast Guard, and never used by we amateurs when we conduct emergency
communications. CW has little or no non-recreational value. I'll bet
more than 40% of HF hams drink beer. Should this be a requirement?

Actually, the correct term here is "YE OLDE FAHRTZ." That's right... those ancient operators who are attempting to keep their little hazing requirements intact for their private HF club into the 21st century. If their outdated way of thinking prevails, we'll most certainly lose lots of allocations to commercial interests. But hey, they don't care... they'll have gone to that great brass key in the sky by then. It's the rest of us who will be the unfortunate victims of their stubborn refusal to modernize and expand our hobby.

Why do we need to continue even discussing this issue Jim if you keep
making silly analogies? Welfare and CW are two totally different
things. If you care to debate the merits of your position fine. If not
why not just resort to name calling like all the other Pro-coders out
here. or do you prefer putting words in my mouth?

Eric

>Nothing too fancy but it works.

Also if you or a friend are a member of CompuServe you can look in library 14
of the HamNet forum and you will find a small QBasic program titled CI-V.ZIP or
CIV.ZIP. It is a IC-737 control program written in QBasic. It will work with
the 706 and give you a good base to add features to.

>Nick Yatko
>yatkonj@ibm.net

There is a mod for the Pro-26, but you will have to order some parts
for it. You can either order just the UK CPU which takes a
considerable amount of skill, or you can get the logic board with the
CPU already attached. The latter doesnt even require soldering skills,
mainly screwdriver skills. Look at http://www.demon.co.uk/javiation/
for more information under the the Pro-26 subpage. This mod would make
the Pro-26 an awesome handheld. I wish that I had a few extra $$ to
spend.

Richard,
Check this page:

http://www.concentric.net/~n9zle/hc.html

Bruce, N9ZLE sells the hardware interface you need, and will give you the HamComm/JVFax shareware you need to make it work. It plugs into a serial port on your computer, copies CW, RTTY, PACKET (crude form), SSTV, and WEFAX pictures. It costs a whopping $20 usually, but they are on sale for $15 for Christmas. Once you get the software, there are schematics in the DOC files to show you how to build other interfaces if you are interested. I bought one a few months ago, and use if for HF WEFAX pictures, and it works great. Be aware that there isn't any hardware that copies 'perfect' CW. How well any of the hardware devises copy is very dependent on the strength of the received signal and the way the CW is being sent.

Well, Eric, when you come along and start posting your baloney in a usenet newsgroup, it becomes everyone who reads the newsgroups 'business'.
I can understand exactly what you are doing, too, Eric. You and your little no code butt are here to see how much crap you can stir up. There isn't anything to debate. We don't debate spelling errors here. Your reading comprehension problem is your problem, not ours. If you can't decipher messages here, I'd suggest you 'LERN' how to read English. If you can't do that, then maybe you should stick to 2 meter DXCC and leave the newsgroups for people who can read. You feel free to post here like a normal person, or get use to having people comment on your baloney.

Hi Spew !! Merry Christmas !! Where you been hiding ? Cleaning the restrooms at the radio station keeping you too busy to stop by and visit ? See you learned a few new words from Squiggy - 'hazing' and 'private HF club'. Leave out 'modernization', that doesn't fit in with your usual line. Besides, nothing modern about putting your little no code butt on HF. Did you buy a radio yet ? How's DX on 11 meters ?

Michael P. Deignan wrote:
>
> The ARRL survey was not a "self-selected" poll. A self-selected
> poll would be where someone puts up a poll on the Net and invites
> others to take it.

Wrong. The ARRL survey was a classic example of a self-selected poll. A self-selected poll is a poll where the respondents must take a positive step in order to respond to the poll, versus a conventional poll, where the pollster selects the respondents. The most famous example of a self-selected poll was the infamous Roosevelt v. Landon poll. In this case the Literary Digest asked its subscribers/readers to mail in their preferences for President. The poll was wildly off, even for its geographical area.
>
> The ARRL poll was little different than any national opinion
> survey. There is always some percentage of people who do not
> respond.

Wrong again. Wrong. National surveys differ from the ARRL poll in a critical way: the pollsters select the respondents. Respondents have the option of saying "no response" but this is included in the tally. This difference is crucial. Polls where the respondents decide whether to respond are universally viewed by polling experts as invalid. Why is this? Simple: when the respondents are self-selected, you are no longer getting a random sample of whatever population you are seeking to survey. The population is tainted by its willingness to respond. Such willingness may be a function of many things. For example, in the case of the League's poll, response could very well be a function of who has the leisure time to read QST cover to cover, and then respond to a poll that is obscurely featured somewhere in the magazine. (I know I didn't. One suspects that lots of older retirees did though.)

> The key is to send out enough surveys that you still
> get a sufficient number back to make a hypothesis test.

The above sentence doesn't mean anything that I can see. It isn't "the key" though. The key to a proper poll is to get a random sample of respondents.

> Classic example is exit polling during elections. When you walk out,
> a pollster asks you to answer a few simple questions. You can say
> "no thank you" and walk away. That doesn't change the fact that the
> polling agency is able to make, with a great deal of certainty, a
> prediction as to the outcome (i.e. the population opinion as a whole)
> based purely upon those who do respond.

Wrong again. Pollsters know that exit polls are very unreliable, and
these are not the basis for serious polling. The polls that most of us
see in the news are ones conducted as I've described above, not exit
polls. Anyway, exit polls are not self-selected because the pollster,
rather than the respondent, decides who will be polled.

>
> Unfortunately, neither you nor I (or a polling expert or statistician) has
> enough information about the "manner this one was" conducted to make a
> determination as to whether or not it holds scientific validity.

Wrong again. It was self-selected, that's clear. Now that's not a
perjorative term, and I'm not bashing the League. I'm sure that they
meant to do their poll in good faith. I'm simply pointing out that it
didn't represent good, or even acceptable, polling technique from a
purely technical standpoint.

Forgive me, old chap, but one sojourn to a friend's house is not much of a basis for an opinion about 2 meters as strongly held as yours seems to be. My nine years on VHF and 30 years on HF tells me that there is frankly very little difference in the quality of the operators. 99% of the new no-code licensees are FB ops, and have been well-socialized into our hobby. The few jammers you hear on 2M are largely a function of the wide availability (thru Radio Shack and the like) of 2M HTs to non-hams. I know that several notorious jammers in LA, for example, are not hams at all. Thus, what differences exist between the two bands (HF and VHF) is probably not a function of any knowledge of Morse Code. Why would it be?

>
> My advice (and this comes from experience) is take the time to learn
> morse-code.

Again, I'm not at all sure what experience you have, other than one afternoon at a friend's, and some time in the CB hobby, to go making the broad statements you've made.

For what it's worth, I've been in the hobby for 30+ years, have an Extra Class ticket (big deal) and have worked thousands of CW QSOs. I nevertheless support abolishment of the code requirement for HF.

nothing's stopping the new guys from walking up and picking the harness
and start pulling in their favorite direction..enough do this and the
whole
train changes direction.

if you join, then when the old guys die off, you'll be left in charge...

but watch out..you'll be the "old guy" then...

4792. Survey - Club Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-27 00:00:00 UTC
From: Gary <gerickso@midstate.tds.net>
Message-ID: <32C48746.761D@midstate.tds.net>
Source record: 208812

Our club is looking for some insight as to how other clubs approach
their repeater and its maintenance and development.

1. Does your club involve its members in the maintenance and development
of your machine as a club activity or do you have a commercial radio service
perform the maintenance?

2. Is your repeater accessible to members of your club or is it at
a shared site with limited access?

3. Does your club encourage members to be involved in repeater activities
or are these activities left to the seasoned pros, commercial or club members?

Thanks in advance for your response.

73's, Gary, W0AB

This is getting arcane and esoteric. The issue is simple: CW is a form of effective communications using rudimentary equipment which will perform well under conditions adverse to complex systems. Those who *master* radio communications should have a working knowlege of it.

It's not POWs exactly, but in study halls a pencil held to make a slight click on the table on both make and break is quite effective for communication between two young hams. And is there any more pleasant thing to listen to than a keyed relay mounted on a large chassis.

Yes,
the cable company is responsible for that equipment. that is sup[posed
to be a shielded system. If you are getting interference, notify them of
it a.s.a.p. If they fail to correct the problem, them make an issue of
it with the local FCC office.
I, too, have had similar problems with the local cable company (cox
communications) and they failed to remedy the problem. It wasn't until I
called the FCC and then notified the cable company of my intent to
pursue this with the FCC that they did anything about it. Also, it helps
to have the cable t.v. tech there looking at your system.

Eric.

John,
I have come to the conclusion that arguing with you is a lot like shoveling manuer. It leaves me with a bad smell and an even worse disposition. So, I am going to ignore you. You are not worth an ulcer. Besides, I have better things to do with my time. I have a life, which is more than I can say for you.

As my parting shot: Why don't you use the "REAL" facts, instead of what you want others to see (and tell your followers te same thing, john).

Yes it can be done with just one op-amp and a PCB
the size of the RS232 connector. Get Hamcomm (see below)
there is a schematics inside for simple and more complex
interfaces.

http://oak.oakland.edu:8080/pub/hamradio/arrl/bbs/programs/hamcom31.exe

There is also on the Web someone selling some cheap interfaces for
Hamcomm (never tested one but must be a one op-amp solution too)

We have an RF engineer who works for a local defense contractor who is
the head (and sole member) of our technical committee.

>2. Is your repeater accessible to members of your club or is it at
> a shared site with limited access?

Private site with limited access. Limited access is not a function of
the club, but a function of the site.

>3. Does your club encourage members to be involved in repeater activities
> or are these activities left to the seasoned pros, commercial or club
> members?

Repeater activities are open to members and non-members alike.

>Shut up

Geesh, John you'll flame anybody for even posting. But then you still don't get it. Maybe this will help.

What has transpired over the last eight months or so has been an object lesson aimed specifically at you John, in the duality of reality that is usenet. The duality I'm speaking of is very similar to the yin/yang of Taoism, hence my parallel usage in this forum. Several well meaning people have tried to explain all this to you in their own words. But yet, you have still failed to make the requisite leap of realization and understand what has transpired. Perhaps you need a more lucid and basic explaination.

Usenet is simultaneously reality and non-reality. It is real because real people are exchanging real communication every minute of every hour of every day. It is non-real because ultimately this is all just a bunch of electrons racing through copper and fiber and silicon, only to end up splashing upon the insides of our monitors. The randomized patterns of those splashes are just so many patterns of colored dots. Only the person viewing those splashes can assign any meaning to the myriad of displayed patterns.

You, and you alone, have attributed meaning to those dots and subsequently reacted to those dots. You have been told that those dots are just another non-reality and not to get worked up about what you read. Others have told you that I'm endlessly baiting you and pushing your buttons. Both are true. Everything that has passed, is just a transient pleasure or an annoyance depending on your point of view or phase of the moon. The tag line I've been using, "Do not adjust your mind, there is a fault in reality," follows the same precept and is consistent with the duality of usenet and Taoism.

I must say though, John, you've reacted quite admirably. Sometimes watching your excursions through the digital non-reality have been quite amusing. Posting miles of obscenities, sending people email bombs disguised as large movie files, even posting dreary tantrums and then claiming said messages

were forgeries. One of my colleagues described the image of a chihuahua foaming at the mouth contaminating the keyboard when shown your rantings. Yes, John I've been pushing your buttons knowing you'd behave in exactly the manner you've done. You have let yourself get worked up over nothing. But, your ego and immaturity wouldn't let you blow it off.

Face it John, you've been Fooled by a Unique Combination of Keenly Elucidated Dissertations in the usage of non-reality. And, you never even got kissed first.

Hi every one.
WE have a SHINWA Tsushinki Co. LTD
model SR001
Wideband scanning receiver 25-999 MHz range
It was picked up in Japan and tha manual is in Japanese.
Is anyone familiar with this receiver? better yet does anyone know tha
phone # of this company or a reseller or ANY contact so we can get a
manual in a language WE can understand.
If you have one can we talk? we seem to have a wierd problem with the
radio after we were playing with the remote. the receiver seems to be
looked up now.
HELP!!

> should prefix with M1/

That is certainly what GB2RS implied. But this is NOT the same as
it used to be, so I think the change should have been stated more
explicitly.

The class of the license was (and is) defined by the callsign
after the 'bar de fraction' (hi) so more detail isn't needed at the
front.

So - if M1/ and M0/ really has been adopted - it was a pointless
change and M/ would have done just as well.

(I still secetly think that GB2RS got it wrong- sigh)

IMO :-)

Let me give more of my opinion. First, let's cut through all the rhetoric about "advanced" technology and present day communications advances as a reason to do away with code. I have operated CW, SSB, packet, RTTY, AMTOR, and PACTOR, and a few others I can't remember. I also work as a professional engineer in the communications industry, hold an MSEE, BSEE, etc. etc. so don't say I'm outmoded or just blowing steam. That won't work.

A couple of technical reasons for keeping CW: (1) The fact is, that CW can "get through" poor channel conditions when most other modes available to the ham, even the advanced digital modes, fail. Why do so many EME operators use slow speed CW? Because you can reduce channel bandwidth and use coherent signal processing to pull the CW keying out from under the noise level. It is not fast, it is not sexy, but it does accomplish the purpose of communicating information over long distances under extremely poor conditions. Try it with SSB! (2) All those sexy, modern communications protocols may not always be available. If you fall back to "modern day" techniques, then you need "modern day" equipment. Some day, one of you just might be up a creek without a paddle in a hurricane, ship wreck or other disaster when all you have is a half broken transmitter, a battery, and something resembling a key. Your TNC won't work, or you dont have one. Your 150 lb. Pentium and 17 inch SVGA monitor have been flooded, or won't work, or you forgot to take them with you. Now what do you do? Oh, I forgot, you are out of range of the nearest cell site, and the phones won't work. And I am reminded of the VietNam war POW's who communicated with each other through cell walls by tapping our Morse code.

And some non-technical reasons again... I remember when I first tried to learn CW in 1960. It took me a long time, but I finally succeeded and I felt good about it. But I didn't say it was stupid and out moded. I respected it and the reasons for it... If you're going to learn about radio communications, you need to understand it's roots. I respected the hams that learned it and use it..it was an impressive skill and still is. It took me so much work to perfect it that I learned something. I learned that I had better handle with care the privledge that I had earned. I'm not saying that all hams who passed CW tests are going to be perfect people. Certainly some of the QRMers and poor operators also passed CW tests. But I do believe that, overall, the person who has the diligence, the caring and the discipline to go the distance and learn CW will usually be the type of personality that exhibits good operating skills and respect for others. That's just my opinion.

Yes technology has advanced a lot. Many of the old skills are irrelevant. Cars no longer have old style ignition systems. But would you want a mechanic working on your car who didn't understand the old systems? Smart computers ("expert systems") can make surprisingly accurate medical diagnoses. But

would you want a computer jocky prescribing drugs for you, instead of a doctor? Todays calculators and computers can solve complex math problems for the student and engineer without that person having to understand the underlying theories or the roots of the technology. But would you want that person designing the next airplane you are flying on?

>reliabally -- at minimum cost -- with family and a few close friends.

And what's wrong with that? Where is it written that "new hams" must act, look, feel, smell, and taste like "old hams" in order to be "real hams?" Once they've earned their license, they have a right to use their radios in any legally-permissable way that they see fit and for whatever legally-permissable purpose they wish.

>
>They are not joiners. They do not join the ARRL or any other national
>political activist ham radio group.

Why in the world would they want to pay money to an organization that fought adamantly against their very existence (the creation of the no-code license), and which continues to oppose their interests by ignoring their wishes and attempting to hold on to the outdated, obsolete, artificial barrier to ham radio known as Morse code?

>I think we are dealing with a different mindset than ever before in ham
>radio and in creating the codefree Tech, we have really created a
>separate "communicator" radio service where current hams who own
>repeaters are "service providers" providing a public utility at no cost
>to the public.

Again, what's wrong with this? After all, weren't the original no-code proposals
known as the "Communicator Class" of license?

Who ever made up that looooooong table of license statistics screwed up the numbers a bit.
1. Guam, KH2, is *not* in the 2nd call area.
2. Hawaii, KH6 and KH7, is *not* in the 6th call area; it is the 13th call area.
3. Alaska, KL7, is not in the 7th call area; I believe it's the 12th.
4. Missing were the license numbers for KH0 and some other Pacific call areas.

Note that KH7 used to be Kure Atoll (one of the northern Hawaiian islands [Kure is actually is part of the City and County of Honolulu]), but that prefix was recently released to all of Hawaii. And to drive my point further, KH7 certainly is *not* in the 7th call area (Nevada et al)!!
It is in the 13th.

Jeff KH2PZ / KH6 (the 13th call area) (but currently /7 for a few weeks)

4807. RED OAK LUMBER FOR SALE!

Newsgroup: rec.radio.amateur.misc

Which means that 60% of hams don't use CW, correct? That means the
majority of hams feel CW is old outdated and out classed by high speed
datamodes that they can't access fully because the coders have helped
keep it held back.
Or is there a better reason we don't high more than 9600 available to
us?

A sage comment, Dave. The same applies to those that insult others that either have skills they cannot gain, or do not feel are "necessary". The first example that comes to mind are those that call those who support code testing "beepers", and other such insults.

Hams need cohesiveness in their ranks - not hotheads dividing the group into "us" and "them" segments.

Bill

Does anyone here know what has been happening to the 7.360 machine in Manhattan? for the past month or so, it's been getting a lot of Intentional qrm from a guy we have unofically dubbed "Netkiller", but I wouldn't think that such activity would cause a repeatear to die, would it? Anyhow, any info on this matter would be greatly appreciated.

Well, it DID sound pretty good to me. How many of these danged mics do
I have to listen to in order to form an opinion on 'em? I mean, do they
have different personalities or something? Quality control in ICOM is
better than that, one suspects.

Or maybe not... Perhaps I was out of line after all.

Anyhow, I did think it was pretty funny; this guy basing a key policy
decision (code v. no-code) on one unlicensed afternoon at a friends
house. (Didn't even have his own radio, I guess) Well, like my daddy
said, if you live long enough you get to see almost everything...

I know this isn't amateur radio, but I thought someone here might know.

Does anyone know what those "V-Link" phones use to communicate? Is it analog or digital? Inband or Outofband signalling? What frequencies?

I'm talking about those things marketed at teenage girls for gabbing with each other. They appear to be glorified walkie-talkies but they are addressable (you can call a specific person if you know their code number or a group of people).

Thanks.

I think some people may get a little bent out of shape by the use of the word "most". It's rather difficult to prove and gut feelings on what the
real percentage is can vary widely from city to city.

One thing that I think has been determined with some certainty is that no-code Tech's are less likely to join the ARRL. Some local clubs may have
similar data on their membership. I don't think that this is merely a reflection of the no-code license but also a reflection of the general public today. Younger people especially are less likely to join "organizations". I wish I could remember the sources but I have read a number of articles about this. It's not just Amateur Radio that is affected by this.

I wish I had a solution to this problem.

> They are not joiners. They do not join the ARRL or any other national
> political activist ham radio group. They do not join local clubs.
> They do not financially support repeaters. To them, ham radio is
> nothing more than an inexpensive alternative to a cell-fone; and as
> such they have no abiding comitment to the service.

Another respondant to your post asked what was wrong with Hams who only use the Service for a cheap cell phone and to chat with a small, closed circle of friends. I don't think that meets very many of the stated reasons for being in Amateur Radio and that's a pretty good argument against
it. But I'm not willing to give up on all those people (no-code Tech or not
because I've seen "higher" class licensees do the same thing) just yet.

That's only half the story, Hans, and you know it. Morse code is still a required testing element for 80% of the classes of amateur radio license and is also required for any amateur operation below 30Mhz.

This in spite of the fact that Morse code is outdated and no longer relavant as a required testing element for the purposes of obtaining an amateur radio license.

How to you come to the conclusion that the 60% of hams that don't use CW
are using high speed data modes? Most of them use SSB or FM. Some even
use, heaven forbid, SSTV.
I don't think you have been in this hobby long enough to realize the extent
of CW on the HF bands. There is a sun spot peak coming up in a few years.
When this happens, even 10m will be wall to wall CW from 28.0 - 28.1 Mhz.
You will hear CW stations from all over the world filling up the bands,
which is one of the reasons that the ITU still requires code!

Go ahead and use it, nobody I know is talking about eliminating it as
a communications mode, the problem is that the 40% (or whatever) who
want to use it also want to force the 60% who don't to know it.

There are many more interesting communications modes that can be done
on HF than CW...

adell@planet.net (Steve - KF2TI (Landing, NJ)) shared these priceless
pearls of wisdom:

->How about It's an International requirement. The ITU requires a
->proficiency with morse code, granted 5wpm would probably satify the
->requirement, but still it's one reason..in fact, it's the main reason

I'm not going to just pass by this comment any more, since you seem to
believe it. That is NOT true. Not, repeat NOT true. If you read the
WHOLE document, you will find that ANY nation can exempt themselves from
this requirement if they choose.

->Amateur radio is strictly a recreational hobby..so what's the point
->you're trying to make??

The point is that any requirement for access to a portion of the spectrum
MUST by LAW bear a nexus -- a tie -- to the use of that spectrum. If it
does not, it is subject to the arbitrary, whimsical, and capricious
argument in the courts.

Speaking of which, can anybody cite a reference, state or federal, where
the CW requirement of the amateur portion of CFR was tested and upheld??

->Again, the rational in realtime is that morse code is required by the
->ITU.

No, this is not realtime, this is legend-time. It,,,just,,,ain't,,,true...

Besides, most of what you mention above is usually carried on the
->VHF+ bands (NOCODE TECH). And they do a wonderful job, but they are
->mainly appliance operators and therefore do not fit into the New World
->Order of the ARS as per WA6VSE.

I wouldn't talk about appliance operators in the General, Advanced, and
Extra bands if I were me.

Why wait years for HF privileges? you could be talking with your
friends and working DX in 6 weeks!....like many of your fellow hams.
I often have contacts with people who are under 12 years old and
one dude just got his General at the age of 92. Sure,you could wait
and avoid the task of learning the code and get what others worked for.
Yes,in time the code requirement will end *years* of wating for this
will pay off but how many choice contacts will this waiting game
cost you? Will you be proud that you waited till the bitter end to
get your way? and how crowded will the bands be? I am not
going into the debate of the codes value in todays world as others
have done that very well. The choice has always been in YOUR hands,
6 weeks or 2 to 3 years. Refusing to bow to the CW requirement does
have merit and it will bring victory but are crowded unpoliced bands
worth it in the end?

Now there's a telling point. If you were actually required to build
equipment, there might be some relevance to a theory exam. CW, like
theory, is there if you know it, and choose to use it. Some hams may opt
to purchase reliable, tested, commercial equipment instead of building,
just as some hams may opt to use SSB or PACTOR instead of using CW.

I think the point here is selective taxation. There are many, many
people who do not get taxed for what ever reason when they buy out of
state in NY. Shouldn't it be everyone or no one?

4843. More on Solar Cycle 23. YOW ! Here comes the really big one !!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-27 00:00:00 UTC
From: flaugher@thepoint.net
Message-ID: <c1b7cc$101822.1a5@news.thepoint.net>
Source record: 208907

This year for Christmas I asked my wife for propagation software. It's not that I'm an HF freak or anything, but I do enjoy muddling around the ham bands and listening to BBC Newshour each morning. And, like children with visions of sugar plums, I've been dreaming of Super Sunspot Cycle 23. Recently, however, I've become a bit concerned.

CAUTION - WARNING: What follows is armchair science. I am NOT a professional researcher nor astrophysicist. I've just been a ham for 29 years and like to keep on open mind.

Here's the deal. It seems that every 160 to 190 years or so our sun goes into a period of relative quiescence. One such event occurred about 1610 to 1730 called the Maunder Minimum. For several cycles the sunspots were...gulp... gone! Can you imagine what how dead 20 meters must have been? We had a less-severe minimum episode in the early 1800's.

In both cases Earth's climate seems to have been affected, though real scientists refute any link between solar variability and weather or long-term climate. Still, during the Maunder Minimum temperatures averaged 10 to 15 degrees colder than now and Europe went through what's called the "Little Ice Age". The early 1800's event was simply called the "little cold period" but it was significant enough to drive Napoleon back from Russia.

This gets involved but interesting. The solar magnetic cycle is 22-years long. Harsh droughts have also hit the American Midwest in 22-year cycles (1910, 1932, 1954, and 1976). Coincidence? Well, every day we learn more about a phenomena in the Pacific known as El Nino Southern Oscillation and a phenomena in the North Atlantic called "blocking", both of which have a lot of effect on weather patterns in the middle latitudes. I took a look at a several years of surface temperatures for the El Nino area and, lo and behold, I think I saw a sunspot cycle or two! Looks to me like a great big "duh" for the climatalogical community. Again, I am NOT a professional climatologist.

Anyhow, back to ham concerns. There are two sunspot cycles for each 22-year magnetic cycle. The the sun is like a huge torroid which charges, discharges, then charges in the opposite direction (north and south swap every 11 years). Because the solar poles switch polarity while Earth's remain the same, we tend to get more sunspots in odd-numbered cycles like 19 and 21 than we do in even-numbered cycles like 20 and 22 EXCEPT when we're slipping into a minima episode.

By the even-odd logic, upcoming Cycle 23 should be the big kahuna! Our last cycle, 22, was the largest ever seen for even-numbered cycles. Thus 23 should be the biggest of all and Europe should be open on 80 meters like an all-night grocery! Of course this also has some engineers concerned because of possible risk to satellites and space vehicles as well as power and communications. We

get some mighty stiff solar winds and proton events during high sunspot years, and NASA has been more than a little interested in forecasts for cycle 23.

But there's a rub forecasting #23. Now that we know the sun is like a torroid, our boys with the pocket protectors can watch magnetic flux at the solar poles in minimal years (like now) and make a guess at the strength of the upcoming cycle based on flux intensities. It's like watching max current through a coil then estimating it's fully charged voltage 90 degrees later when current is zero. The problem is that recently observed flux values do NOT support a very active solar cycle on the way. So the evidence is conflicting. By looking at even-odd cycle pairings, it looks like 23 will be a whopper. By looking at the precursor solar flux, cycle 23 could be a real fizz.

A very good report to read just came out from NOAA/NASA on the Space Environment home at http://www.sel.bldrdoc.gov/sel_home.html. Twelve scientists from ten agencies and four countries gathered predictions for #23 and produced a forecast.

Back to climate. The only time an odd-numbered solar cycle shows up smaller than its even-numbered predecessor appears to be when we are going into a Minimum episode like the Maunder or the cool-down of 1810.

A theory posed on the web by French systems engineer Jean-Pierre Desmoulins suggests that gravitational forces in the solar system affect the sun and pull the magnetic cycle out of phase ever so often. He modeled Venus, Earth, and Jupiter and looked at heliocentric alignments (sysygies). His thesis is at http://www.alpes-net.fr/~j_p_desm/sun.html. Anyhow, once the system phase shifts there is a dampening effect, especially if the shift causes one or more solar cycles to occur later than usual. Like an old oscillator, the sun gradually recovers. This is what some believe has been occurring since the early 1700's and why global temperatures (and sunspot intensities) have been rising since the Little Ice Age.

Before any of you hard-core DX'ers think of firing a nuke into the sun to jump start it, I would point out that a group called the HK Project (http://www.mtwilson.edu/Science/HK_Project/hk_main.html) is busy comparing our sun to other stars of similar age and size. About 25 percent of them may be in a Maunder Minimum state. Our sun seems to be about in the middle range of activity level at the present time. This is to say that if our solar system is "normal" we might spend about 25% of our time with a lower solar output than we have today. Noting the variability of other stars might also be a hint at the existence of planetary systems surrounding them if, indeed, it is planetary interactions which give rise to variablity.

It will be very interesting to see what happens in the next few years as Cycle 23 unfolds. Cycle 22 started it's downturn early. If 23 is late getting started, as some are already speculating, or if it is very weak, we may be in for many years of global chill or at least more severe weather in the US, central South America, and other places affected by ENSO and North Atlantic blocking. We could be looking at major floods, droughts, disruption of growing seasons, or worse yet, really lousy HF conditions for the rest of MY lifetime! I certainly hope NOT!

If you take an interest in these theories, grab a search engine and look around for things like Maunder Minimum, Solar Variability, Ice Cores, and Little Ice Age. Check out the El Nino sites too. And oh, it would be wise to tread lightly on your environmentalist friends. The environmental community is, to say the least, NOT amused by any theory which competes with global warming/greenhouse gas ideas. A few folks have cited problems getting funding for this sort of research in America, and of course quite a bit of legislation is tied to the effect of pollution on global temps. Keep your conversation centered on radio waves and propagation so their heads will just keep nodding.

>>Let me give more of my opinion. First, let's cut through all the rhetoric
>>about "advanced" technology and present day communications advances as a
>>reason to do away with code. I have operated CW, SSB, packet, RTTY, AMTOR,
>>and PACTOR, and a few others I can't remember. I also work as a professional
>>engineer in the communications industry, hold an MSEE, BSEE, etc. etc. so
>>don't say I'm outmoded or just blowing steam. That won't work.

You won't see me putting down who you are, but I'll comment on
what you say.

>>A couple of technical reasons for keeping CW: (1) The fact is, that CW can
>>"get through" poor channel conditions when most other modes available to the
>>ham, even the advanced digital modes, fail. Why do so many EME operators use
>>slow speed CW? Because you can reduce channel bandwidth and use coherent
>>signal processing to pull the CW keying out from under the noise level. It is
>>not fast, it is not sexy, but it does accomplish the purpose of communicating
>>information over long distances under extremely poor conditions. Try it with
>>SSB!

And, as again obviously needs repeating, if CW is the best for
EME work, then those people doing that will continue to do so.
Elimination of CW testing doesn't change that. Mandating CW
knowledge for everyone on HF is not validated because some
EME (or all EME) folks use or want to use CW. Those of us
that propose ending mandatory CW testing fully support your
ability to continue using CW.

As to the ability to get through, that has been offset by other modes.
CW doesn't deserve special knowledge consideration (certainly
not on a pass/fail basis as is the case today) anymore than we
don't expect all hams to have packet capability or any other mode
of operation. The perceived value of CW to get through in
the past was based on (IMHO and as you go on to offer below) safety
and emergency needs. However, there hasn't been any ham
safety/emergency need for CW in years.

>> (2) All those sexy, modern communications protocols may not always be
>>available. If you fall back to "modern day" techniques, then you need "modern
>>day" equipment. Some day, one of you just might be up a creek without a

>>monitor have been flooded, or won't work, or you forgot to take them with you.
>> Now what do you do? Oh, I forgot, you are out of range of the nearest cell
>>site, and the phones won't work.

This is just more of the old crisis claim. None have been shown to
exist where the operational mode required CW or could only
use CW. That has been the case for many years now. Lord
knows there'd be documentation flying about this newsgroup
if there was even ONE such valid case for your claim to rely
on.

>I break out the notebook, TNC, mobile and battery sorce from their
>water and shock proof carrying case and send more traffic than the
>beepers ever could and do it more efficiently.

>> And I am reminded of the VietNam war POW's
>>who communicated with each other through cell walls by tapping our Morse code.

Who is going to teach POWs Morse Code now. The military
has abondened use of morse. The military ONLY teaches
morse to specialists who copy other country's transmissions.
That will likly end at some point as more and more of the other
countries expand their communications ability with encrypted
data and voice capability. In any case, the fact that POWs
did use CW has no bearing on mandatory CW testing for
amateurs...which should be self evident to anyone.

>>And some non-technical reasons again... I remember when I first tried to
>>learn CW in 1960. It took me a long time, but I finally succeeded and I felt
>>good about it. But I didn't say it was stupid and out moded. I respected it
>>and the reasons for it...

Well I don't recall ever saying it was stupid. But yes, it is
outmoded. But again, so is AM yet I have no opposition
to you using either CW or AM if you want.

>> If you're going to learn about radio
>>communications, you need to understand it's roots.

I don't need to be able to send or receive morse code at
any particular speed to understand the fundamental
and the concept of how morse is used. Neither does
anyone else.

>> I respected the hams that
>>learned it and use it..it was an impressive skill and still is. It took me so
>>much work to perfect it that I learned something. I learned that I had better
>>handle with care the privledge that I had earned. I'm not saying that all
>>hams who passed CW tests are going to be perfect people. Certainly some of
>>the QRMers and poor operators also passed CW tests. But I do believe that,
>>overall, the person who has the diligence, the caring and the discipline to go
>>the distance and learn CW will usually be the type of personality that
>>exhibits good operating skills and respect for others. That's just my

>>opinion.

You are entitled to your opinion...however, what you state by
opinion is that you see the CW test, not as a truly required skill,
but rather as a barrier that one must pass to provide an indication of
one's worthiness to be a good ham. Such barriers are fine for clubs
and fraternities, but unfortunately, that is
not the proper role or responsibility of government regulations
(the test requirements) which is what this is really all about.

>>Yes technology has advanced a lot. Many of the old skills are irrelevant.
>>Cars no longer have old style ignition systems. But would you want a mechanic
>>working on your car who didn't understand the old systems?

I really couldn't care at all as long as s/he is competent to repair
my contemporary vehicle. The funny thing about your anaology,
however, is that one need not know anything about morse code
to be a good technician or electrical engineer. I attended a two
year tech school and no one needed to learn CW to be a good
technician, likewise, the military electronics schools didn't teach
morse code to the electronic techs either.

>>Smart computers
>>("expert systems") can make surprisingly accurate medical diagnoses. But
>>would you want a computer jocky prescribing drugs for you, instead of a
>>doctor?

Your comment eludes me on that one as to what or how it
has any relationship to mandatory CW testing.

>> Todays calculators and computers can solve complex math problems for
>>the student and engineer without that person having to understand the
>>underlying theories or the roots of the technology. But would you want that
>>person designing the next airplane you are flying on?

Some probably do anyway. In reality, however, one must understand
the math (conceptually) in order to accurately program or input
the data to be calculated correctly.

>Next time I am a POW I will remember that. But seriously I see the
>point. Still not a good reason to force CW on me and the others who
>don't need or want it.

I may be wrong, but I understood that the POW tap code was *not* morse.
It was much simpler, but still effective - 1 to 5 taps in pairs to
form a number [1,2,3,4,5] + [1,2,3,4,5]. Thus 1,1 was A, whereas 5,5
was Z. This gives 25 pairs, so I think Q was missing or J was doubled
with I. Numbers might have been spelled out or tapped from 1 to 10.

Trying to use morse would have required training everyone to a minimum
level as well as a way to form two symbols, dit and dah, using tones or
intervals, since duration was not available. This was not always
feasible. Also, while you could get pretty fast with any system given
practice, I doubt that POW's in general were worried much about their
QSO rate.

A point well made. Too many in this thread say they will not join the
ARRL until the ARRL changes to suit them. An ARRL member's vote counts
just the same whether that person is pro-code or not. If more no-code
proponents were members of the ARRL the survey results could have been
much different.

Here is a summary of news items covered on edition #196 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 3-Jan:
-
1. Merry Christmas, FCC Delays New RF Exposure Compliance Rules
2. KB6ZV Appoints a New ARRL Great Lakes Division Vice Director
3. International Amateur Radio Permit a Step Closer to Reality
4. David Ransome Releases New Version of STSPLUS Tracking Program
5. NTIA Report Says HF Can Accomodate New and Expanded Ham Bands
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Special Event Station Calendar
8. "The RAIN Dial-up" from Chicago
9. RAC Extends Membership Campaign Due to Canada Post Delays
10. AMSAT-NA Sponsors 25th Annual Straight Key Night on OSCAR
11. Florida Man Sentences for Computer Stalking Incident
12. US Department of Energy Installs New Supercomputer
13. Phone Companies Cry Foul Over Flat-rate Internet Access
14. FCC Reviews International Phone Regulations, Too Costly for US
15. "This Week" Seeking Special Feature Producers/Commentators
16. Weekly Propagation Forecast
17. Happy New Year from All of Us at "This Week in Amateur Radio"
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Therese Cheney, N0YNQ, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
```

Program audio is on the 6.2 MHz analog subcarrier and carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

I know it's interesting to some. It just isn't interesting to me. And
I suspect that some people feel the way I do (and some don't.)

To me (unlike some other people) the facination with ham radio is
communicating over longer distances than say, a local telephone call.
This is not all there is to ham radio. It is, however, one of the
things that tends to attract newcomers. I have seen many potential
newcomer hams turn off to the hobby and seek alternatives when they
learn that in order to do this on HF (the best way to communicate over
these distances) they must learn Morse Code. They don't see the point,
and there are other hobbies that don't require this. (Like the
internet).

Someone elsewhere on this newsgroup called me a whiner. Well, I'm
whining about the coming demise of our hobby, from the
non-replentishment of our numbers. Personally, I've got my Extra
ticket, and I suppose things will hang together for the 40 or so more
years I've got left. Or maybe not.

Mine either. The old canard that Technician hams conduct themselves like CBers is so much malarky. Some of the worst operating I've heard is by general class and above hams. The absolute worst, of course, is by unlicensed individuals.

Frankly, I think there are some who make up stories about how bad the VHF operating procedures are to bolster the argument that we need CW as a "filter" to keep bad types off of HF. The facts contradict this thesis. The vast majority of ops on VHF, at least in Southern California, are excellent ops, who behave as traditional hams, i.e. courteous, good operating procedures, etc.

4853. The CW Requirement Favors Retirees

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-28 00:00:00 UTC
From: "Roger J. Buffington, W6VZV" <rogerjb@ibm.net>
Message-ID: <32C51CEE.73B8@ibm.net>
Source record: 208717

Anyone ever notice that most of the people you QSO with on HF are retirees? I know of no hobby that is so predominantly comprised of older people than this one. The odd thing about it is that I don't remember it as being nearly this bad when I was a teenager in the hobby, back in the late 60s.

The CW requirement tends, I think, to keep it that way. Busy working people probably lack the time to master 13 WPM CW, and have other hobby alternatives, such as the internet, that do not require them to do so. Although working people see the relevance of a theory and procedure exam, (and are willing to take the time out of their busy schedules to prepare for and pass them) they tend to view the code test as a non-productive use of their time (which it is). Therefore, in great numbers they pass ham radio by, or at best become no-code Techs.

Now, I've got nothing against retirees; I hope to be one myself one day, and lots of these guys are my buddies. But surely none of us think that it is a good thing for our hobby that our hobby has systematically excluded non-retirees.

By the way, if you disagree with what I've written, then ask yourself WHY is it that HF is so overwhelmingly dominated, even on weekends, by retirees? I think you may come back to my theory.

As an interesting corellary to the above, the recent ARRL survey on keeping the CW requirement also contained a systematic bias in favor of retirees. 1) probably retirees with lots of time on their hands are the ones with the leisure time to discover, and respond to, such a poll; 2) the ARRL is to a very large extent comprised of retirees. (No, I don't have figures, but I'll bet I'm right.)

```
(The previous version of this program has already been posted, several
months ago.)

char version[]="$Id: bip.c,v 1.10 1996/03/31 23:25:24 skubi Exp skubi $";
/*
bip.c Marcin Skubiszewski (c) 1996

HOW TO COMPILE bip

bip.c is expected to compile with ANSI C compilers, with C++
compilers, and with K&R (old style) C compilers. With the latter, say
-DOLDCC on command line.

Under Linux and under systems derived from System V Release 4 (SVR4,
for short), bip.c can work with or without Xwindows.

- If you do not have Xwindows, say "-Dlinux -DNOX" when compiling
(this holds even if your system is SVR4, not linux). The resulting
executable will always beep on the console of the machine where it
runs, and will not use Xwindows. It will work regardless of
whether a given machine has Xwindows installed.

- If you have Xwindows installed, you can either proceed as above,
or say -lX11 at the end of the command line when compiling bip.c. In
this case, the executable will use Xwindows or the local console,
according to whether variable DISPLAY is set or not at execution time;
but it may not run at all o machines which do not have Xwindows
installed.

Under systems other than Linux and SVR4, bip requires Xwindows; say
-lX11 when compiling it.

bip has been tested on the following systems:

SunOS 4.1.3 gcc -O2 bip.c -lX11 -o bip
or: cc -DOLDCC -O bip-oldcc.c -lX11 -o bip

Solaris 2.5
(i.e. SunOS 5.5) gcc -O -I /usr/openwin/include bip.c -lX11 -o bip

Linux gcc -O2 bip.c -lX11 -o bip
or: gcc -O2 bip.c -DNOX -o bip

DEC Alpha OSF/1 gcc -O2 bip.c -lX11 -o bip

ESIX (a SVR4 system) gcc -o bip bip.c -Dlinux -DNOX -L/usr/ucblib -lucb -lc

AND WHAT IF IT DOES NOT COMPILE ?
```

Porting

Look above to see whether bip.c has been tested on your system. If
not, some porting may be needed. Just do it, usually it's simple.

If your system is not Linux and you do not have (and have no simple
way to get) Xwindows, bip.c will not run or compile: bip.c uses the X
Windows libX11.a programming interface in order to send beeps. You
must find an interface in your system which allows you to send beeps
of arbitrary durations, and modify bip.c to use this interface instead
of Xwindows. This is harder than porting bip.c to a new platform which
has Xwindows.

Whe you do porting (of any kind)

- you can ask me for help, I will be glad to provide it.
- you are encouraged to consider the results of your porting as your
shareware contribution, and instead of sending money, to send them to me
with permission to redistribute freely.

General thoughts

Check the correctness of your installation of the system. Upgrade if
appropriate (eg., fetch the newest installation of linux).

Specific solutions

If errno.h (or a file included from within errno.h) cannot be found,
just replace the line "#include " with "extern int errno;".

GENERAL DESCRIPTION

A program to learn Morse code. Sends random groups, words from a
user-specified list, or user-provided text.

"bip -H" gives the list of options; "bip -h" gives shareware information

General description:

This program contains the Morse code as in section 30.39 of the ARRL
Handbook 1995, national characters excepted. The encoding is in
global variable morseCode, and its is straightforward to change or
augment it.

When sending externally provided text or words, the full encoding is used.
A newline is treated as whitespace, a blank line is treated as a
paragraph (AL).

When sending random groups, only the specified set of characters is used. By
default, the character set used in French ham exams is in use. See the
description of options in order to change the set. Examples:

bip s=eish5 - only send characters e i s h 5
bip su - use the USA ham exam charset
bip s+bbbd - cause b to accur 4 times more frequently than normal,

and d twice more frequently
bip cw13 "s=.,?/+SK AS="
- send American non-alphanumeric chars & prosigns at 13 WPM
hostname | gawk 'BEGIN{FS="\.";}; {print $1;}' | bip q F- d70
- this should be in your .login (DISPLAY must first
be set as appropriate)

By default, the program sends random groups of five characters. Option
g causes the groups to contain characters instead. Options g
and G used together provide for variable-length groups with [n..m]
chars.

Option F- causes stdin to be sent instead of random groups.
Option F causes to be sent.
Options W- and W consider stdin (resp.) as a list
of blank-and-or-newline separated words, and send these words in a
random order.

Speed: options dw and cw (and the more complicated options
d, c, w, ww) determine sending speed. I highly recommend the Farhneit
method: even if you are a complete beginner, set a fast character
speed ("dw15": 15 WPM or "d60": 60 ms, which is roughly equiv.), and
make the spacing between characters as big as necessary (eg. "c1500":
1.5 s of silence between consecutive chars, or "cw4": 4 WPM overall
speed).

Tone and volume: option p sets the tone (it takes an argument in
Hz). Not all machines allow you to change tone. Option P sets the
volume (it takes an integer argument between 0 and 100: the % of the
maximal possible volume).

Jitter: option j determines jitter, between 0 and 1 (the more jitter,
the harder it is to copy). "j0" means no jitter (the default), "j0.3"
is strong jitter.

Examples of options:

bip dw12 speed 12 WPM
bip dw12 cw5 Fahrein system: each character sent at 12 WPM,
overall speed 5 WPM
bip g3 G10 sends random groups of length chosen
randomly between 3 and 10
stty cbreak; bip q F- dw15; stty cooked
send what you type on the keyboard

HOW TO START LEARNING CODE

You can start with learning e i s h 5, individual characters sent at
14 WPM, overall speed 3 WPM. This is accomplished by "bip s=eish5 dw14
cw3". Then, increase overall speed progressively up to 7 WPM, i.e. to
"bip s=eish5 dw14 cw7" (you do not change the character speed).

Then, you learn similarly t m o 0. Then, you mix in the previously-learnt characters: "bip s=eish5tmo0tmo0tmo0tmo0tmo0tmo0 dw14 cw3" (t m o 0 appear most of the time, the other characters appear six times less frequently); or "bip s=eish5tmo0 dw14 cw3" (all characters equiprobable).

And so on, until you know the entire charset. Then, with the entire charset, you work speed beyond 7 WPM. For example, to practice for American Extra Class, use "bip su cw18". When practicing for an exam, you may use words, eg. "bip cw18 W/usr/dict/words" or variable-length groups, eg. "bip su cw18 g1 G10".

If, at any stage while learning, you observe that you have special problems with some characters, you increase the relative frequency of these characters until the problem disappears. Eg. if you can't correctly copy b, l and AS, use "bip su 's+bbbbllllAS AS AS AS'.

Be prepared to spend lots of time. For example, learning code for the French exam (10 WPM, groups & cleartext, 1 error/minute allowed) takes up to 100 hours.

SHAREWARE INFORMATION

This is shareware. If you use this program, you have to send me a small reward for developping it. Rewards can take two forms: code or money. You do not need to send both.

CODE: improve this program or port it to a new system or architecture, and send me your code, with permission to reuse freely.
Even small improvements or easy ports will be appreciated.
E-mail: skubi@rodin.inria.fr

MONEY:
- USA residents, please send $7 (international money order) or $10 in cash (this amount is $10 because I prefer money orders and because $7 bills do not exist)
- French residents, envoyez SVP 35 FF (cheque ou mandat postal)
- other nations, please send the equivalent of $7 in the currency of your choice (cash or international money order)

Marcin Skubiszewski
24 rue de l'Oasis
92800 Puteaux, France

Permission is granted to the public to modify, copy and use this program, under the condition that this is not done for profit or commercially. Before you distribute a modified version of the program, the following conditions must be met.

- A copy (in source form) of the modified program must have been sent to the original author, with permission to reuse freely.
- The notices "SHAREWARE INFORMATION", including requests to send code or money to the original author, must remain intact in the modified version. No other request for money (or

```
anything) can be added.
- The modified version must contain a prominent notice saying who
has made the modifications.

To otherwise copy, modify or use the program requires a specific
permission. Ask the author.

Contributor: Geoffrey S. Mendelson (N3OWJ), gsm@mendelson.com (testing
on SVR4).

Well to use the logic stated I would be a better communicator than
someone who only knows code. I am proficient in packet, rtty(even
though I don't send), SSTV, etc.
I guess that makes me more of a REAL HAM than some of the beepers.

Eric :)

Why is it that some people automatically ASSume that every tech
memorized the question pool and seems incapable of having studied the
theory and data needed to pass?

Well I appreciate the sentiment but I choose not to learn code.
I do not want to justify the requirement by taking the test and ading
myself to the ranks of hams who sacrificed a moral issue for HF
privilege.
Like a freind of mine says, I will probably learn code and be a beeper
one day when it is no longer required.

>73 de n4jvp
>Fritz

Well we as a nation have ignored more important international treaties
before. The problem is the select few in the ARRL who keep the FCC
convinced that we need the requirement.

If there were changes the band plans would remain the same. I even
agree with setting off the current CW potions as they are for CW ONLY.
That would help insure the beepers a place to play.

There would still be entry level exams such as the tech license. Advancement would be through technical proficiency and operating procedures. Unfortunately this might require than some experienced hams spend some time wit the younger or newer entrants into the hobby. Some would elmer, but I get the feeling from my experiences with experienced hams the vast majority would hide from new comers and treat the ones who don't code like vermin. As witnessed of the experienced hams here in the newsgroup.

So far your post has been the most logical and considerate so far. You stated your opinion in a non-combative manner and I am ever so graetful to your contribution to the great debate. Thank You.

Well said. It appears that in CA, NJ and MS that the qualifiers stated
in the post concerning techs does not apply.
Now imagine if CW was still required for any class license...What
would have happened to those 5,000 assistance calls? A great many of
them would probably went unanswered.
I quess that plugs the hole in the CW SAVES LIVES argument as well.
I wonder how many lives were lost because of the CW requirement?
I wonder how many have been saved by no-code techs?

I put forth a great deal of effort to join the hobby. Unlike many
assertions to the contrary, I studied the theory and data to pass my
test. Not memorize the questions.
When you speak of effort I wonder if you could clarify what effort is
in relation to your position. I am not trying to be sarcastic but..
Is effort only learning morse code or can effort be something else?

We do all our own work and have never heard of commercial maintenance
for ham gear.

>2. Is your repeater accessible to members of your club or is it at
> a shared site with limited access?

The site is a public service of a golf course and we and they have the
only equipment at the site. We get free space and electricity in
return for helping them with their TV and 2-way equipment and recently
gave them a couple of new commercial HT's.

>3. Does your club encourage members to be involved in repeater activities
> or are these activities left to the seasoned pros, commercial or club members?

Anyone wanting to volunteer are welcome but we have a primary person,
the trustee, and a faithful few who do whatever is necessary.

The code is, and has been, obsolete for some time. I remember reading that even the U.S. Navy is no longer going to monitor code.

My occasional forays into the ham domain suggest that the code requirement has not proved to be a barrier to the "Yahoo" element.

I remember hearing an interview with a well known ham magazine editor. Basically, to paraphrase him, "We need psychological screening tests and not a C W requirement".

I think that this is as close to the truth as we're going to get. If the ham test were going to be relevant to our times, evaluation of keyboard skills or of basic computer programming and/or computer upgrading etc. would be far more relevant. I would wonder how many accomplished "fists" are competent behind a keyboard.

->Well if we actually honor the treaty we should have a requirement. BUT
->the U.S. has a long history of ignoring international treaties. We
->ignore treaties that have more important ramifications that the ITU.
->So why won't we ignore this one?

You CAN honor the treaty and STILL NOT have the CW requirement. The
document was written with enough holes in it to let Granny Prichard make
fifteen yards against the Steelers off-tackle. There is a provision that
ANY nation can exempt itself from this requirement if it so chooses.

Alright, you DON'T so choose. If you are real about wanting to let
"no-code" people into the ranks at any level, then you say that one word a
minute is the requirement and you can bring along a chart and you can have
enough minutes until you pass. You have met the LETTER of the treaty, no?
Setting ANY level seems to me to be arbitrary, whimsical, and capricious,
but then again, I live 3000 miles from Oldington by choice.

Message-ID: <01bbf4ee$d7954b60$71e96ec6@chuckster>
Source record: 208736

I have used CW almost exclusively for the past 15 years and I love it.
13 wpm did not come easy for me but in time I made it to 25 wpm.
Times are changing and we must change but we need not throw
the baby out with the bath water to make these changes!

Proposal # 1766

A working knowledge of code will no longer be *required* for any band.
One MUST possess a Code *Endorsement* to USE cw on any band
except in times of emergency... *Endorsements* are grandfathered
to all who have passed cw testing in the past and can be obtained
by passing code tests in the future. In this way we can perserve and
recognize the *skill* of cw and reward those who use it without
mandating it's use by others..... I believe it is better to bend a little
than to break. CW is a skill and Compromise is the way to preserv it.
Let us open the Door to the future yet retain and respect the past.....

Roger J. Buffington, W6VZV <rogerjb@ibm.net> writes:

> Wrong. The ARRL survey was a classic example of a self-selected poll.
> A self-selected poll is a poll where the respondents must take a
> positive step in order to respond to the poll, versus a conventional
> poll, where the pollster selects the respondents.

This is just plain incorrect. Your definition is 'almost' correct,
in the sense that in a self-selected poll the polling agency does
not select the representative sample from which to conduct the poll.
A classic example is the Libertarian poll on the Internet, where
anyone could go "vote" for one of the three major Presidential
candidates. Naturally, Harry Brown won by a landslide.

In the case of the ARRL, however, we do not have a "self-selected"
poll. The ARRL selected participants and sent them a ballot in the
mail.

> The most famous
> example of a self-selected poll was the infamous Roosevelt v. Landon
> poll. In this case the Literary Digest asked its subscribers/readers to
> mail in their preferences for President. The poll was wildly off, even
> for its geographical area.

I suspect that the problem with this poll had more to do with the fact
that the readership did not accurately parallel a representative sample
of the voting population as a whole, thus attempting to make a conclusion
about the population as a whole would be completely inaccurate.

> Wrong again. Wrong. National surveys differ from the ARRL poll in a
> critical way: the pollsters select the respondents.

Detail exactly how the ARRL poll differed. Please explain how the ARRL
mailing out surveys to members is in any way different than a pollster
selecting respondents.

> Respondents have
> the option of saying "no response" but this is included in the tally.

Not always.

> This difference is crucial. Polls where the respondents decide whether
> to respond are universally viewed by polling experts as invalid. Why is
> this?

They are, huh? Well, that's really strange, since agencies like Arbitron
have used these form of "mail in surveys" for decades. Not to mention
the huge amount of marketing research that cigarette manufacturers do via

the "mail in survey".

> Wrong again. Pollsters know that exit polls are very unreliable, and
> these are not the basis for serious polling.

"Exit polls are very unreliable"? Were you watching television on election evening? Every major news organization was predicting winners of key races seconds after polls closed, purely on the basis of "exit polling". In 99% of the cases they were pretty close to being correct too.

I guess all those "unreliable" exit polls really showed us, huh?

Yes! You can find it at most hardware stores!!!

It's usually located right between the skyhooks and the mufflerbelts!
Ask for the 5 gallon jug because it keeps forever. Works good on mobile
antenna's too!

Oh yeah....I've been using it for years. As a matter of fact, there is great controversy about it among the contesting an DXing community because its use amounts to cheating.

I don't think they should take it off the market, however, because it's also good on a cracker.

> by passing code tests in the future. In this way we can perserve and
> recognize the *skill* of cw and reward those who use it without
> mandating it's use by others......

An excellent suggestion. I proposed many months ago Endorsements
for all HF operations including SSB, Digital, and CW. The endorsement
earned the privilege of mode and band segment usage.

However, the suggestion was bombarded with comments about its
complications, the necessary examination of technical information
would require elaborate new test questions, enforcement would be
hard, etc., etc., etc....... And the thread died.

Hope yours obtains a better response.

Yeah, I run into this attitude with my students all the time. "Why do
I have to learn about history when all I want to do is become a
computer programmer?" "Why do I have to take this management class,
I'm going to be a systems analyst?" and so on.

>Someone elsewhere on this newsgroup called me a whiner. Well, I'm
>whining about the coming demise of our hobby, from the
>non-replentishment of our numbers.

I hate to break it to you, but the demise of our hobby has nothing to
do with the lack of numbers. Its all about money. The day the government
figured out they could sell frequencies for billions of dollars was the
day ham radio was told it was living on borrowed time.

Roger J. Buffington, W6VZV <rogerjb@ibm.net> wrote:

>Anyone ever notice that most of the people you QSO with on HF are
>retirees?

Depends on when you're on the air, I guess.

>I know of no hobby that is so predominantly comprised of
>older people than this one.

Amateur radio has always been, and will continue to be, an older,
financially-affluent white-male hobby.

>The odd thing about it is that I don't
>remember it as being nearly this bad when I was a teenager in the hobby,
>back in the late 60s.

Those people in their 60s today where in their 30s back in the late
sixties, so I tend to think you wouldn't have seen it.

>The CW requirement tends, I think, to keep it that way.

You were doing okay up until this point, when you attempted to link
the dreaded "downfall of amateur radio" on to CW. The problem with
amateur radio is >not< related to CW. Its related to >radio<.
Radio isn't sexy any more. Thirty years ago amateur radio was "high
tech" in many people's minds. Today, its low-tech.

>Busy working
>people probably lack the time to master 13 WPM CW, and have other hobby
>alternatives, such as the internet, that do not require them to do so.

Let's try this: "Busy working people lack the time to master the theory,
and have other hobby alternatives, such as the internet, that do not
require them to do so."

Yep, I would agree with both of those statements. Part of the problem
with amateur radio is you have to take positive actions, sometimes
requiring exertion of effort on your part (whether studying theory or
practicing code) to get your license. Most people do not want to do
this. That is why only ~.25% of the US's population has an amateur
ticket while millions more have cell phones.

>Although working people see the relevance of a theory and procedure
>exam, (and are willing to take the time out of their busy schedules to
>prepare for and pass them) they tend to view the code test as a
>non-productive use of their time (which it is).

There is no substantive evidence to support this assertion.

>Therefore, in great
>numbers they pass ham radio by, or at best become no-code Techs.

The codeless license has become the entry-level license of choice.
It grants voice privileges and a wide range of operating privileges
immediately, which is why I think it is popular. In addition, it is
easier to study for than a novice ticket, where you must split your
time between theory and CW.

However, it is interesting to note that a large portion of the
codeless techs that enter the hobby do upgrade their license class.
So much for that "busy schedule" theory you have.

>By the way, if you disagree with what I've written, then ask yourself
>WHY is it that HF is so overwhelmingly dominated, even on weekends, by
>retirees? I think you may come back to my theory.

Because, as an ARRL demographic study indicated last year (or perhaps
the year before), the average ham is a financially affluent white male.
Even "cheap" HF radios cost upwards of $1k.

[more supposition deleted]

Hmmm, donno bou't tat, but I got some Contact Restorer
that works well during high QRM/QRN. Just spray it into the rig
during the QSO and you're ready! One can is $1000. Send money
to my callbook address and "Good luck in the contest".

It is truly amazing to see people act this way. I am a Tech-plus
class ham and yes I did learn code. For some hams, code is the best
thig in the world. I have met hams who won't go near anything below
50mhz. Does that make them any less of a ham than you? I ahve met guys
would won't use voice or any mode other than CW. Does that make them
any less of a ham? I have met the nicest people on the bands and I
have heard some of the fights on the 20 meter voice. It seems that we
have sectors of the fraternaty that refuse to have different ideas on

how hams should behave or what they should know. With all the pressures of taking ham bands (like 220) and decreasing license applications and fewer hams all around, WHY CAN'T WE FIND ROOM FOR EVERYONE!!!! So I don't know 20wpm code, so I don't use the lower bands enough, I am still an amateur radio operator with authorization from the Federal Communications Commision to operate on certain frequencies in the Amateur Radio Service. If this division keeps up then we might as well give the bands up and sell all our equipment.

Although the anti-coders would have liked this one because it would often yield an answer they'd like to quote ("I considered getting into ham radio, but was put off by the code requirement.") it would be even more difficult to get results. Ask the average person on the street about ham radio, and many, if not most, get a mental picture of CB. Just like many folks see a ham carrying an ht and mistake it for a cell phone. From my own perspective, it's difficult to say which is the greater insult. :-)

ARRL got approximately 6% response rate, based on 10,000 surveys returned out of 170,000 members. OK, statisticians, what's the average rate of return on surveys, any survey, taken these days? I'd bet that it's pretty small.

: >If you want an accurate poll, you hire a company like Irving Fields or

Ben,

A even better product, though it is hard to obtain is a spray bottle
of Turbo Prop Wash.

Avionics techs use it religously. Knocks down SWR's etc.

Its only available a airports.

$
I was once a doubting Thomas also, one who never thought any of those
schemes worked or where even legal. But after hearing so much about it
and
all those testimonials I thought HEY, WHY NOT TRY! And I did. After 2
week
I received several thousand dollars. After four weeks my local mailman
suggested if I am going to expect such a volume of mail I should open a
post office box, A LARGE ONE! Now with the Internet this money making
idea
gets even better. Why do you see so many of these get rich quick messages
on the Internet? IT REALLY WORKS. Besides whats $5, Consider it an
investment. Take this advice, if it doesn't recover your time and money,
don't try it again.

Testimonials from others who have tried this idea have reported FANTASIC
results. Markus Valppu says he made $53,664 doing this, Dan Stepstone
made
$17,000 in this perfectly legal and simple plan.

****
This works, I did it and have already received $682.00 in the past week.
****
Hello! I've got some awesome news that I think you need to take two
minutes to read if you have ever thought "How could I make some
serious cash in a hurry???" , or been in serious debt, ready to do
almost anything to get the money needed to pay off those bill
collectors. So grab a snack, a warm cup of coffee, or a glass of your
favorite beverage, get comfortable and listen to this interesting,
exciting find!
Let me start by saying that I FINALLY FOUND IT! That's right!. I
found it! And I HATE GET RICH QUICK SCHEMES!! I hate those schemes
like multi-level marketing, mail-order schemes, envelope stuffing
scams, 900 number scams... the list goes on forever. I have tried
every darn get rich quick scheme out there over the past 12 years. I

somehow got on mailing lists for people looking to make money (more like 'desperate stupid people who will try anything for money!'). Well, when I was a teenager, these claims to 'get me rich quick' sounded irresistible! I would shell out $14.95 here, $29.95 there, $24.95 here, and another $49.95 there. I had maxed out my new Circuit City Card AND my Visa...I was desperate for money!! So, I gave them all a chance but failed at every one of them! Maybe they worked for some people, but not for me. Eventually, I just tossed that JUNK MAIL in the trash when I got the mail. I recognized it right away. I can smell a money scam from a mile away these days, SO I THOUGHT.... I thought I could sniff out a scam easily. WAS I WRONG!! ....I LOVE THE INTERNET!!!

I was scanning thru a NEWSGROUP and saw an article stating to GET CASH FAST!! I thought..."Here on the Internet?? Well, I'll just have to see what schemes could possibly be on the internet." The article described a way to MAIL A ONE DOLLAR BILL TO ONLY FIVE PEOPLE AND MAKE $50, 0000 IN CASH WITHIN 4 WEEKS! Well, the more I thought about it, the more I became very curious. Why? Because of the way it worked AND BECAUSE IT WOULD ONLY COST ME FIVE DOLLARS (AND FIVE STAMPS), THAT'S ALL I EVER PAY....EVER!!

Ok, so the $50,000 in cash was maybe an tough amount to reach, but it was possible. I knew that I could at least get a return of $1,000 or so. So I did it!! As per the instructions in the article, I mailed out ('snail mail'for you e-mail fanatics) a single dollar bill to each of the five people on the list that was contained in the article. I included a small note, with the dollar, that stated "Please Add Me To Your List." I then removed the first position name of the five names listed and moved everyone up one position, and I put my name in position five of the list. This is how the money starts rolling in! I then took this revised article now with my name on the list and REPOSTED IT ON AS MANY NEWSGROUPS AND LOCAL BULLETIN BOARD MESSAGE AREAS THAT I KNEW. I then waited to watch the money come in...prepared to maybe receive about $1000 to $1500 in cash or so.... But what a welcome surprise when those envelopes kept coming in!!! I knew what they were as soon as I saw the return addresses from people all over the world-Most from the U.S., but some from Canada, even some from Australia! I tell you, THAT WAS EXCITING!! So how much did I get in total return? $1000? $5000? Not even!!! I received a total of $23,343!!! I couldn't believe it!!

I now have a brand new black Acura Integra to speak for, due to this!! Now after almost 8 months, I am ready to do it again!!! So maybe it was possible to get $50,000 in cash, I don't know, but IT COMPLETELY DEPENDS ON YOU, THE INDIVIDUAL! You must follow through and repost this article everywhere you can think of! The more postings you achieve will determine how much cash will arrive in your very own mailbox!! It's just too easy to pass up!!!

Let's review the reasons why you should do this: The only cost factors are for the five stamps, the 5 envelopes and the 5 one dollar bills that you send out to the listed names by snail mail (US Postal Service Mail). Then just simply repost the article (WITH YOUR NAME ADDED) to all the newsgroups and local BBS's you can. Then sit back and, (ironically), enjoy walking (you can run if you like! :o) down your driveway to your mailbox and scoop up your rewards!! We all have five dollars to put into such an easy effortless investment with SPECTACULAR REALISTIC RETURNS OF $15,000 to $25,000 in about 3-5 weeks! So HOLD OFF ON THOSE LOTTERY NUMBERS FOR TODAY,EAT AT HOME TONIGHT INSTEAD OF TAKEOUT FROM McDONALDS AND INVEST FIVE DOLLARS IN THIS AMAZING MONEY MAKING SYSTEM NOW!!! YOU CAN'T LOSE!!

So how do you do it exactly, you ask? I have carefully provided the mostdetailed, yet straightforward instructions on how to easily get this underway and get your cash on its way. SO, ARE YOU READY TO MAKE SOME CASH!!!?? HERE WE GO!!!

*** THE LIST OF NAMES IS AT THE END OF THIS ARTICLE. ***

OK, Read this carefully. Get a printout of this information, if you like, so you can easily refer to it as often as needed.

INSTRUCTIONS:

1. Take a sheet of paper and write on it the following: "Please add my name to your list". This creates a service out of this money making system and thus making it completely legal. You are not just randomly sending a dollar to someone, you are paying one dollar for a legitimate service. Make sure you include your name and address. I assure you that, again, this is completely legal! For a neat little twist, also write what slot their name was in: "You were in slot 3", Just to add a little fun! This is all about having fun and making money at the same time!

2. Now fold this sheet of paper around a dollar bill ,(no checks or money orders), and put them into an envelope and send it on its way to the five people listed. The folding of the paper around the bill will insure its arrival to its recipient. THIS STEP IS IMPORTANT!!

3. Now listen carefully, here's where you get YOUR MONEY COMING TO YOUR MAILBOX. Look at the list of five people; remove the first name from position one and move everyone on the list up slot one on the list. Position 2 name will now move to the position 1 slot , position 3 will now become position 2, 4 will be be 3, 5 wil be 4. Now put your name, address, zipcode AND COUNTRY in position 5, the bottom position on the list.

4. Now upload this updated file to as many newsgroups and local bulletin boards' message areas & file section as possible. Give a catchy description of the file so it gets noticed!! Such as: "NEED FAST CASH?, HERE IT IS!" or "NEED CASH TO PAY OFF YOUR DEBTS??", etc. And the more uploads, the more money you will make, and of course, the more money the others on the list will make

too. LET'S ALL TAKE CARE OF EACH OTHER BY BEING HONEST AND BY PUTTING FORTH 120 PERCENT INTO THIS PROFITABLE & AMAZING SYSTEM!!! You'll reap the benefits, believe me!!! Set a goal for the number of total uploads you'll post, such as 15-20 postings or more! Always have a goal in mind!!! If you can UUE encode the file when uploading, that will make it easier for the people to receive it and have it downloaded to their hard drive. That way they get a copy of the article right on their computer without hassles of viewing and then saving the article from the File menu. Don't alter the file type, leave it as an MS-DOS Text file. The best test is to be able to view this file using Microsoft's Notepad for Windows 3.x or WordPad for Windows '95. If the margins look right without making the screen slide left or right when at the ends of the sentences, you're in business!

5. If you need help uploading, simply ask the sysop of the BBS, or "POST" a message on a newsgroup asking how to post a file, tell them who your Internet provider is and PEOPLE WILL ALWAYS BE GLAD TO HELP. I would try to describe how to do it but there are simply too many internet software packages with slightly different yet relatively simple ways to post or upload a file. Just ask for help or look in the help section for 'posting'. I do know that for GNN, you simply select 'POST' then enter a catchy description under the subject box, choose 'ATTACH', selecting 'UUE' and NOT 'TXT', then choose 'Browse' to go look for the file. Find your text file CASH.TXT and click on it and choose 'OK'. Place a one line statement in the main body section of the message post screen. Something like "Download this to read how to get cash arriving in your mailbox with no paybacks!" or whatever. Just make sure it represents its true feasibility, NOT something like..."Get one million dollars flooding in your mailbox in two days!"

You'll never get ANY responses!

6. And this is the step I like. JUST SIT BACK AND ENJOY LIFE BECAUSE CASH IS ON ITS THE WAY!! Expect to see a little money start to trickle in around 2 weeks, but AT ABOUT WEEKS 3 & 4, THE MONEY STORM WILL HIT YOUR MAILBOX!! All you have to do is take it out of the mailbox and try not to scream too loud (outside anyway) when you realize YOU HIT THE BIG TIME AT LAST!!

7. So go PAY OFF YOUR BILLS AND DEBTS and then get that something special you always wanted or buy that special person in your life (or the one you want in your life) a gift they'll never forget. ENJOY LIFE!

8. Now when you get low on this money supply, simply re-activate this file again; Reposting it in the old places where you originally posted and possibly some new places you now know of. Don't ever lose this file, always keep a copy at your reach for when you ever need cash. THIS IS AN INCREDIBLE TOOL THAT YOU CAN ALWAYS RE-USE TIME AND TIME AGAIN WHEN CASH IS NEEDED!

People have asked, "What if the plan is played out and none sends you any money?" So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet everyday and are willing to give it a try?!? Estimates are 20,000 to 50,000 new users EVERYDAY!!! Remember, play FAIR and HONEST, and THIS WILL WORK, I PROMISE YOU!!! You just have to be honest. Make sure you print this article out RIGHT NOW! ! ! Also, keep a list of everyone
who sends you money and always keep an eye on the newsgroups postings to make sure everyone is playing fair.

FINAL THOUGHT
In order for this system to work and remain legal, you have to follow the steps and send your $5. Honesty is always the best policy. Good luck, have fun and make some serious money!!!!!

Proof:
This arraignment does not constitute a "chain letter" under US Title 18 Code section1302. Because you are purchasing a service.

>I disagree. Art is the art of communication.

Art is used here in the same sense as in "The Art of Electronics" by Horowitz and Hill. Artisans were the forerunners of engineers, and the usage of art in this context is referring to the art of engineering.

>Science is the technology of building mechanisms to communicate.

Science is used in the sense of scientific enquiry into natural phenomenon, as in the work of Faraday, Ampere, Hertz, Crookes, Heaviside, etc. Science is most definitely *not* engineering. Those are two distinct and very different disciplines. Engineers use the discoveries of science in their work, and scientists often use the fruits of engineering in their work, but it is engineers who build, and scientists who observe and discover principles of natural law.

>Both components
>are equally important, but amateur radio is not just about
>technology. Hence the "international goodwill" clause.

That clause does not exist in the ITU definition of amateur radio. In fact, the content of international contacts is sharply limited by ITU regulations to the reporting of the results of technical tests or to remarks of such an unimportant nature that recourse of other means of communications would not be warranted. That's hardly the stuff on which international goodwill is founded. US regulations are unique in stating a goal of enhancing international goodwill. But the overriding ITU regulations tend to moot that objective.

And in practice, the bulk of amateur HF communications doesn't serve to enhance international goodwill. In fact, much of it serves to enhance international illwill, IE contesting, Dxing, etc which serve to limit any meaningful dialog between people of different nations.

>glass panel.

I'll let you in on a secret. Take that outside stinger off the glass-mount cell antenna and performance won't change enough to notice. It's the coax inside that's doing the bulk of the radiating. The stinger just serves as a capacitance hat to modify the VSWR a bit. With metallic tint in the glass, it doesn't even do that. It just serves as a "hey, I've got a cellphone" sign to prospective thieves.

Use an antenna with a real groundplane to decouple the coax. It'll work much better than any glass-mount because it'll keep the radiated RF outside where it belongs, not bouncing around inside the passenger cabin.

I once ran a glass-mount Avanti on 2m. VSWR was 1:1. I lost the stinger driving down the expressway one night, and VSWR went to 1.2:1, signal reports were basically unchanged. The coax was still doing the radiating. I put a magmount 5/8ths Larsen on the roof, and signal reports jumped dramatically. Places where I was marginal into the repeater were now solid, simplex range increased, etc. Removing the stinger of the magmount caused the VSWR to shoot *way* up, and signal strengths to drop to near nil, proving it was the *antenna* doing the radiating, not the coax. The magmount has enough capacitance to the body to form an effective groundplane coupling at 2m. The glass mount has no such coupling.

I know that the theory says an end fed halfwave doesn't need a groundplane, and it is true, the *antenna* doesn't need a groundplane, but the feeder does. Without the decoupling provided by the groundplane, the coax becomes the primary radiator, and it is *inside* with you, not outside where it can do the most good.

If you depend on "jerk-back" to save your life, I hope you have plenty of insurance for your widow to spend. You are talking nonsense. Muscles in the area through which the current passes, usually primarily the hand/forearm, will contract, but that can cause you to *clamp down* on the voltage point and be *unable to let go*. If you pierce the skin while doing so, you'll fry. I've lost two co-workers to that, and luckily survived the same thing myself because the skin was not pierced and I was able to disable the source of voltage with my free hand. (Dry skin has a high R, but the wet icky inside is a good conductor.)

>> What happens is that "I" get fried twice as extra crispy.

And just how many milliseconds does it take to put the heart in fibrilation? I'll tell you, it takes less than 8 mS of 30 mA current through the chest. Think you can "jerk-back" that quick? The reason *static* electricity doesn't fry you or fibrilate the heart is that the capacitance on which it is stored holds insufficient coulombs to supply enough current. That 200 amp service entrance carrying 220 VAC *does* have sufficient current to fry you real good.

Uh, huh. Just keep trusting to "jerkback". You may find out who the
real jerk is when they scrape your steaming remains off the branch
feeder. I watched two people *die* because of that jerk response.
If you avoid piercing the skin, a brushing contact with either 110
or 220 is rarely more than a painful nuisance, but if you jerk and
pierce the skin on the conductor, goodbye Charley. The skin blisters
and ruptures like an over-cooked hot dog, and the body *steams*.
It isn't a pleasant sight.

That's true.

>2. In order to make a judgement about the population as a whole in a
> random sample of a finite population, you need about 4,000 respondents.

That size group may not be necessary, it depends on the size of the parent group. But it is critical that the sampling be random, and not self-selected as these polls are. Any self-selected poll is defacto biased. This is fundamental. It is why Sarrio's polls are worthless, and why call-in polls conducted by radio and TV stations are worthless. Self-selection bias corrupts them absolutely.

>3. Opinion surveys do not need "control groups" unless you are attempting
> to draw a parallel against an outside group (i.e. non-licensed people).

A control group, drawn from a pool of disinterested individuals, will show if there is any systematic bias in your polling technique. If the results from the control group show a skew, it indicates the poll is biased in that direction due to faulty polling technique.

>4. I would like for you to explain why you feel a control group is
> necessary in this survey, and why you feel that any control group
> outside of the amateur population would even have enough pertinent
> knowledge about the code/no-code issue to be able to give an informed,

> rational opinion.

They shouldn't. If they could, they couldn't serve as a control. The purpose of the control group is to highlight any biases in the polling method used that are systematic to the technique and not the result of true opinions by those polled.

>>If you want an accurate poll, you hire a company like Irving Fields or

>>polling and then compare the samples against a pre-determined gradient.
>>None of this was done, so I have to doubt the accuracy of the poll.
>
>I don't see any reason why the ARRL should have done this at all.

If they really wanted unbiased information on which to form policy, they would commission a proper poll. If they just want amens from the choir, they can do the sort of self-selected polling that they did.

The major problem with self-selected polls is that those responding are those who are activists passionate about the topic, IE the tails of the bell curve. They are not representative of the bulk of the population purported to be surveyed. The polls show that among ARRL members, the tail of the curve supporting Morse testing is slightly longer than the tail of the curve against Morse testing. This shouldn't be surprising given the nature of ARRL membership demographics. But it says nothing useful about the opinion of the bulk of the members in the central bulge of the bell curve who are not passionate activists on the topic.

As a point of reference, during the comment period for the code test free Tech license, comments ran about 8 to 1 *against*. This shouldn't have been surprising either since up until that time amateurs were self-selected by the Morse test itself, IE most of those vehemently opposed to Morse testing simply were not amateurs because of that fact. So if anything, the current polls show a greater balance between the tails of the bell curve than was previously possible.

Of course this is a subject which needs to be decided on its merits, and not on a nose count of current licensees, even a statistically valid one, since it is a matter of public policy, not just current licensee policy. Its impact will fall primarily on future licensees.

The issue of licensing *is*, however, ruled solely by government
regulations. The extent of government intrusion into internal
amateur radio clubby matters should be strictly limited to satisfying
legitimate government regulatory interests. As Curtis noted, it is
not government's purpose to administer fraternity initiations or haze
the pledges. If private radio clubs or the ARRL want to do that, they
are free to do so, and amateurs who object are free not to join those
groups, but it is illegitimate to use the power of government to compel
such initiation rites on everyone wishing to gain access to the public
spectrum.

>People like to belong to something special. We like to identify with
>groups. We are attracted to the notion of community. And what is
>particularly interesting is that people who share a common background
>that may have involved some hardship, some fun, some challenge etc. tend

>experience that helps glue the Amateur Radio Service together and make
>it something special....not just a collection of rules and regulations
>that we can use to stake our claim to spectrum space with. It is
>community.

And private groups are free to create such fraternal organizations, and to conduct whatever weird rites they like for entrance. That is not a legitimate function of government, however. This is where you and your fellow travellers go wrong. You wish to use the power of government for your private fraternal purposes.

Ask yourself this, would you think it legitimate for the government to require you to crowd 8 clowns into a tiny car in order for you to obtain a driver's license? The Shriners do it, so to forward their fraternity, should they be allowed to use the power of government to compel such bizzare behavior from anyone wishing to obtain a driving license?

I hope most people recognize this as an illegitimate exercise of government power. And the reason it is illegitimate is that it serves no compelling public regulatory purpose. The same goes for the current Morse hazing. It no longer serves a legitimate public regulatory purpose.

We must ask ourselves, is there a problem with slow or no Morse receiving ability in the amateur service? Have large numbers of citations been issued for slow or poor code use? What is the problem which the Morse receiving speed requirement attempts to address? If you can come up with no better reason than a fraternity initiation rite, then the government has no legitimate authority to maintain such a requirement.

At one time there was a legitimate reason for maintaining a Morse receiving ability among amateurs. That reason was so that government or life safety services stations suffering interference from amateurs, and having no other means of intercommunicating with them to tell them to cease save OOK Morse, could do so. That time has now passed.

Government and life safety radio services have abandoned Morse, and so there is now no compelling public interest for amateurs to maintain a Morse reception capability. Thus current Morse reception speed testing is obsolete, and like other obsolete regulations such as ones requiring a horseless carriage be proceeded on foot by a man bearing a red flag in daytime and a lantern at night to warn the horses of the oncoming hazard, the regulation should be struck from the books.

>What do you mean by 35%? I guess I view it as a much smaller percentage, since there
>is more spectrum available on 6 meters than all the HF bands combined.

3 of the 8 exam elements are Morse receiving tests. That's 37.5% of
testing devoted to a single thing. And 5 of the 6 amateur license
classes require passing one or more of those elements. That's 83%.
And that 83% gets privileges unrelated to Morse for passing Morse
tests. Clearly, Morse tests hold a disproportionate position in
amateur licensing.

>clearly HF access is just a drop in the bucket in terms of spectrum access. If
>anything, HF ops are in the back of the bus.

That would be true if HF were *all* that HF ops got. But of course they
have everything else as well. So not only do they get the back of the
bus, but the front, and the driver's position as well.

>on the repeater, and it's obvious that they are communicating from
>fixed-station to fixed-station. You'd think that they never heard of

Honestly, it doesn't bother me if people blab on the repeaters all day.
I think long, drawn-out, incoherent vaguely technical technical discussions
are pretty much the staple of ham radio. It doesn't do anyone any good, I
think, to have repeaters that sit on empty channels and ID every 10 minutes.
I wanna' hear talking.

I think the problem is jammers. (When communications all go to SS, jamming is
going to be trickier-- though same goes for tracking down people using
spectrum without permission.)

You know, I think I'm figuring out something. Last time HF was really, really,
dead then I heard more people talking on VHF.

> movie files, even posting dreary tantrums and then claiming said messages

Really, now you want to blame ME for these e-mail bombs you & Eric
complained
of????? Now lets be honest. According to Eric, those had been tracked
down
to the server & domain of "Portal". If you look on ANY of my message
headers
you will find that I AM NOT on protal or coming thru portal. I have
never
been a customer of Portal. The facts seem to contradict you (again).

> Yes, John I've been pushing your buttons knowing you'd behave in exactly
> the manner you've done. You have let yourself get worked up over nothing.
> But, your ego and immaturity wouldn't let you blow it off.

But this is where you are wrong Dick. This whole message of yours is
nothing but a frantic attempt at saving face for yourself. You are

saving face by trying to do damage control & minimization. You're attempting to minimize & rationalize your actions and then claim that e-mail bombs were sent from me (to you?) when your comrade Eric and other
facts even contradict you. Remember, YOU were the one who started this thread with a message about my march thru scannerdom. (which you still have not said wether our local ham club has permission to re-print) I have been getting MANY great laughs from this along with my friends, we have thought it to be very entertaining. (although we were surprised that someone with a commercial license would conduct himself like you have).

To give you some idea of just how much entertainment you have provided I would like to refer you to the message thread that Larry Johnson put out saying all that was needed was the "Baffoon & Bert" to make YOUR entries complete. Larry & I laughed for quite a long time at the last club meeting. Even friends of mine in Iowa (like Guitrman) thought it was funny. Another friend sent me an internet christmas card with my title
you gave me as "King Mackey, all hail". Go look at the card for yourself
by following the following:
1. With your browser go to: http://check.cardbuilder.com/check/
2. Enter "johnmackey" as the Card Name.

> Face it John, you've been Fooled by a Unique Combination of Keenly Elucidated
> Dissertations in the usage of non-reality. And, you never even got

No you were fooled by making a fool of yourself. You did it all. Face it, you & Eric raised your flag & no one saluted but yourselves. Now, you are trying to salvage what ever you can & are trying to say this was a clever joke & are hoping to make it into something else. But you can't, we've been laughing at you all along so it is to late to change no. Even Kevin Potter realized what was going on as we exchanged e-mail about it. See the e-mail I sent to him a few days ago, & confirm it with him for authenticity if you like. As he & I discussed, apparently only you & your friend were taking this seriously. It is attached to the end of this message.

Thanks for the Laughs DICK.

No I thought it was pretty funny actually. To me this is all just fun &
games. I think that some people are reading a LOT more into this than
what should be. I mean, really, we all have lives with more interesting
things than internet news groups (at least I hope we all do).

<unrelated stuff snipped>

> You obviously enjoy the hobby of hamming, even more than I do. Even though

Would the CW endorsement grant further spectrum privileges or would it
just be a piece of wall paper. The real question is do HF no-coders
receive privileges to the entire HF spectrum? I favor some sort of
no-code HF ticket but I do not want to open up the entire HF spectrum
to no-code operation and reduce to the CW/data band segments to 25 kHz
per band as has been suggested.

I have no problem with a non-endorsed CW-type using CW.
I have no problem with a no-code HF ticket.
I do have a problem with no-code entitlement!

My guess is we're going to see more VHF weak signal stuff just for the very
silly reason of all those folks who bought IC706s. Is it just me or has
every second gainfully employed ham radio operator picked up one of these
radios. I heard a Tech say he got one so he could eventually go on HF.
I figure if you're looking to save money, and are going to buy a HF radio
anyway, that this the cheapest way to get on 2m SSB. Otherwise you risk
spending $500 to $1200 for a radio that has no one to talk to other than
the local repeaters.
I have no doubt that the other two, Yasesu and Kenwood will start
offering 2m to their HF radios.

>>...they have no abiding comitment to the service.

Wow...I (along with Jim KF6CR) live in repeater-rich Southern California. I must be scanning the wrong frequencies and have severe personality disorders: I hold a measley Technician License - but I seem to have "broken" all those above assertions.

I immediately joined three local Amateur Clubs when I got my license. I joined the ARRL. I teach classes in Emergency Traffic Handling both for Amateurs and GMRS licensees. I run an Official Bulletin Station of the ARRL - a landline BBS. The Club that Jim is affiliated with - Citrus Belt Amateur Radio Club - is doing marvelous work for the benefit of the entire State of California. I am involved in a 2 Meter Repeater that handles over 5,000 public assist/highway emergency calls annually.

Now I know we don't want this thread to get into "personal" exceptions to what was stated anout Technicians...but the frequencies I regularly monitor on 2 Meters, 220, and 440 simply aren't what were described in the original post. Sure, there are abusers of this privilege. But pervasive and abhorrent? Not in my sphere of influence.

>older people than this one. The odd thing about it is that I don't
>remember it as being nearly this bad when I was a teenager in the hobby,
>back in the late 60s.

No, I haven't noticed that Roger, but I think I probably talk to diferrent people on HF than you do. I got an email message from a 16 year old ham a few weeks ago who was nuts about HF and wanted to make a sked to work Guam for a new country. I think the lack of younger hams on HF may have something to do with the economy. Stop and think about it. $2K for a middle of the line HF rig. $3K for a decent amplifier. Another $2K or $3K for a tower and an antenna. Add a few meters, some coax, some digital boxes, a computer, another $4K. So the average HF ham station costs around $10K. Yes, I know you can buy an HF rig for $800, and put a wire up in the tree. But thats not the 'average' HF ham station. As you mention later, time has something to do with it also..... Most hams I have met lately are in their 40's and still working (HF DX'er types).

>The CW requirement tends, I think, to keep it that way. Busy working
>people probably lack the time to master 13 WPM CW, and have other hobby
>alternatives, such as the internet, that do not require them to do so.

Busy working people lack the time to play on HF also. Although there are a few hams on HF who still have jobs, regardless of the group you have been talking to. Busy working people sometimes lack the $ for new tires on the car, so a $10K HF station isn't in the budget. Just in this newsgroup I have seen a bunch of postings saying 'my ham station consists of an HT' because the budget doesn't have room for anything else right now.

>Although working people see the relevance of a theory and procedure
>exam, (and are willing to take the time out of their busy schedules to
>prepare for and pass them) they tend to view the code test as a
>non-productive use of their time (which it is). Therefore, in great
>numbers they pass ham radio by, or at best become no-code Techs.

That's one theory, I guess. But it's a hard theory to verify.

>Now, I've got nothing against retirees; I hope to be one myself one day,
>and lots of these guys are my buddies. But surely none of us think that
>it is a good thing for our hobby that our hobby has systematically
>excluded non-retirees.

It doesn't exclude non retiree's. As a matter of fact, it excludes some retirees, like Grandpa Lenny. There are no questions on the 610 form relating to employment, past or present.

>By the way, if you disagree with what I've written, then ask yourself
>WHY is it that HF is so overwhelmingly dominated, even on weekends, by
>retirees? I think you may come back to my theory.

No, I won't. I think you need to listen to other bands, other countries, other modes than the one you are listening to. Stop checking into the Geritol Net on Sunday morning on 40 meters. But maybe on weekends all those working people have to cut the grass ?

>As an interesting corellary to the above, the recent ARRL survey on
>keeping the CW requirement also contained a systematic bias in favor of
>retirees. 1) probably retirees with lots of time on their hands are the
>ones with the leisure time to discover, and respond to, such a poll; 2)
>the ARRL is to a very large extent comprised of retirees. (No, I don't
>have figures, but I'll bet I'm right.)

Here you are grasping again, Roger. Another theory hard to prove. I'll be more than willing to make your bet, but how are we going to figure out who won ? Somebody ran a 'why don't you join the ARRL' poll a while back, on one of the websites. I recall seeing the number one reason was expense. If someone can't afford $31 for a membership to the ARRL, I doubt they have a lot of disposable income for HF gear.

So, in my opinion, you don't find a lot of young hams on HF for the same reason you don't find a lot of 20 year olds driving Lincoln Towncars. Money. So now I guess someone will come along and say we should keep the CW requirement and legislate the prices of HF gear.....

Hi every one.
WE have a SHINWA Tsushinki Co. LTD
model SR001
Wideband scanning receiver 25-999 MHz range
It was picked up in Japan and tha manual is in Japanese.
Is anyone familiar with this receiver? better yet does anyone know tha
phone # of this company or a reseller or ANY contact so we can get a
manual in a language WE can understand.
If you have one can we talk? we seem to have a wierd problem with the
radio after we were playing with the remote. the receiver seems to be
looked up now.
HELP!!

To Ron N4GFO/KH2, being held captive on Guam:
1. Airmail to the Mainland is 32 cents; why not write directly to Icom?
1a. You're closer to Japan than the Mainaland - write directly to Icom in Japan.
2. Why not (gasp!) build a power supply? You can strip an old TV set to get many of the necessary components.
3. FS and WTB posts are very effective when placed on rec.radio.swap.
4. Contact Jim Kehler KH2D at kh2d@kuentos.guam.net for Elmer help.
5. Call/write Honolulu Electronics - phone calls to Hawaii from Guam are cheaper than to the Mainland.

>
> Any suggestions?

An amateur here in KL7 land had a similar problem some years ago, though
I don't think any fiber optics were involved. Despite being a highly
qualified engineer for a local telco, he didn't get too far with the
cable folks in terms of sympathy or help, UNTIL...

he pointed out that he did (legally) operate a TWO-WAY radio station,
and if signals leaked out and caused him interference, then his LEGAL
signals could certainly leak IN as well. I think they really started
listening when he said something about 4Kw into 24 stacked 22 element
Yagis yielding something like 20Kw ERP at their nearby leaky line amp.
He wasn't advocating deliberate interference or anything, but line amps
are expensive... he would hate to see any get smoked.

I guess my point is there should be equal motivation from the cable
company to fix any leaks to protect their system too.

Carl said I was pandering for presenting a similar idea. It seems that
the no-code element wants full HF privileges and spectrum, a no-code
extra. Endorsements just promote the caste system, whether it is
today's "olde phartz" versus the no-code techs or it is the B/MSEE
no-code extra distaining the ones who have made this hobby so
desirable today.

Save your breath, no-code has a long way to go before it becomes a
reality. After that do not hold your breath waiting for the no-code
led "Technological Revolution". All the no-code yackers and contesters
will be "olde phartz", firmly against giving up part or most of
THEIR HF spectrum for the alleged advancement of technology.

Evan, Get real.. when YOU hire a kid at $5.00/hr. what would you expect
him or her to know about computers?
they couldn't even afford to own one let alone learn about them..
Jim..

4928. OOPS!!! Im a TECH-PLUS!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-28 00:00:00 UTC
From: "Ray Hodgkiss, N9YNG" <hodgkiss@kiva.net>

Er....

not that it matters to my point, but I made a mistake in the last post!!

Im a tech-plus. But I guess that should have been somewhat suspect when
I said I was a no-code tech who could copy 10wpm. ;)

My bad!

Why would keyboard skills be more relevant? Or programming skills? How many hams use keyboards in their operations? How many hams need to program computers to support their operations? All this alleged importance of computer skills in ham radio is a lot of crap. Only a tiny fraction of hams use computers for their ham operations. If you need the skill to support your interest, you'll develop it, whether it be CW, keyboard, programming, or whatever...

There was a time, not too long ago when hard work got you a reward, harder work got you a bigger reward, and even harder work got you still a bigger reward. What is so damned bad about that concept? Now I see people who won't work because they want to start a new job and get a CEOs pay and hams who pass a No Code test and want Extra class privileges.

You are advocating SOMETHING FOR NOTHING and I don't buy it!

Work and get a reward-no work, no reward.

That machine has been jammed for years as all the NYC repeaters on 2
meters. Get on 220 and you'll see a new world of ham radio. MAARC has
a machine on 220 at the same location on 223.940.

>
> Has anybody heard of this stuff?
>
> Ben

I understand that it was introduced in the early '40s and taken off of the market recently, because of two problems people were having with it:

1. The grease was fine but people were using it too generously. This enticed certain operators to run excessive RF through the antenna. The grease would melt and drip down the coax, causing the antenna to resonate at all of the harmonic spurs the transmitter was emitting, all the way down into the LF spectrum (depending on the length of the station's coax run). The military found the situation amusing (Japanese subs were running aground due to the navigational interference from ham stations...) until recently, when the grease on the Flying White House's antennae generated thousands of complaints from Riverside and San Bernardino County residents who reported that their garage doors were opening and closing unpredictably every time Air Force One came to town.

2. About that same time, one unscrupulous amateur radio equipment manufacturer built a 50cc vial of the stuff into their line of antenna tuners. They enjoyed great success inspired by their "great performance" until one day that one of their units blew up on the ham bench of an Arizona statesman and amateur, soaking his midsection and pants. For the next three weeks, any time a high-powered CBer would drive down the street modulating, his undershorts would begin to smoulder. Needless to say, this caused a congressional investigation that resulted in the almost complete ban of the manufacture for sale of this product in the U.S. It is still manufactured for sale to third-world countries only as disk brake anti-squeal for military vehicles and aircraft, and as a high-protein nutritional supplement to China.

I guess that if they ever get out of line, all we have to do is point our beams that direction, and call "CQ, CQ".

Hope that helps...

This is about the most logical and sensible answer to the Morse Code controversy that I've seen. I happen to be for retaining a morse code test requirement. An endorsement would satisfy me just as well. The endorsement could be much like a drivers license. Some states require a motorcycle endorsement before you can operate a motorcycle, so why not a CW endorsement for operating in lower portions of the HF bands? The SSB operators could still have their portions of the bands, as well as AMTOR, RTTY, SSTV and other digital modes.
I would think that it would be enough to satisfy both sides. Unfortunately there will be some who find fault with it. I can't wait to hear their reasons why.

The following list will be included in the Jan '97 release of the FAF.
Any comments or corrections would be greatly appreciated. (The FAF lists
specific U.S. frequencies and channels in various bands of interest to
scanner listeners.)

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

CTCSS (PL) Frequencies

Freq (Hz)	Designator EIA	Ham	Freq (Hz)	Designator EIA	Ham	Freq (Hz)	Designator EIA	Ham
67.0	L1	01	110.9	2Z	15	179.9	6B	29
71.9	L2	02	114.8	2A	16	186.2	7Z	30
74.4	WA	03	118.8	2B	17	192.8	7A	31
77.0	L3	04	123.0	3Z	18	203.5	M1	32
79.7	SP	05	127.3	3A	19	206.5	8Z	
82.5	L4	06	131.8	3B	20	210.7	M2	33
85.4	YA	07	136.5	4Z	21	218.1	M3	34
88.5	L4A	08	141.3	4A	22	225.7	M4	35
91.5	ZZ	09	146.2	4B	23	229.1	9Z	
94.8	L5	10	151.4	5Z	24	233.6	M5	36
97.4	ZB	11	156.7	5A	25	241.8	M6	37
100.0	1Z	12	162.2	5B	26	250.3	M7	38
103.5	1A	13	167.9	6Z	27	254.1	OZ	
107.2	1B	14	173.8	6A	28			

Motorola differs from EIA with: XZ (L1), XA (L2), XB (L3),
YZ (L4), YB (L4A), ZA (L5). ICOMM does not use 97.4 and uses one
less than the amateur numbers above that (i.e. ICOM #25 = 162.2).

4941. Icom IC02at audio output problem

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-28 00:00:00 UTC
From: Mike.Ward@f150.n2613.z1.fidonet.org
Message-ID: <852225532.AA06638@rochgte.fidonet.org>
Source record: 208805

I was using one of my IC-02at radios the other day (for packet) and noticed that I was not receiving any responses to my packets.

I pulled out the plug that goes into the earphone jack and found that there was no audio. I thought that the problem might be with the battery, so I hooked it up to the 12-volt supply. Using this source (or a BP-7 13.2v battery), I found that I do get some low-volume audio. However, it is not enough to be useable.

Does anyone recognize this symptom (voltage-dependent volume) and have any idea what the solution might be? Thanks for any help you might have.

4942. 2M Repeater sounds like CB set.

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-28 00:00:00 UTC
From: trynor@nbnet.nb.ca
Message-ID: <5a26i0$789@agate.nbnet.nb.ca>
Source record: 208806

I am the trustee of a local 2M repeater here in New Brunswick, Canada. Recently, I have been having problems with a few individuals who make the repeater sound a whole lot like a CB set. I have as diplomatically as I can, asked everyone to be courteous when using the repeater as it is linked and many people tend to use it. Most of the people who frequent the repeater are great, but a couple of bad apples just don't seem to get the idea that they are causing me grief:

What are they doing?

- Senseless, long, conversations about absolutely nothing. Occasionally, it gets a bit more business related or "personal" (believe me, it gets pathetic) than I think should be on a public radio system of any sort.

- Usage: The individuals each will tie the repeater up at least 2-3 hours per day - ALL DAY (they don't work).

- Courtesy: Can't get a word in edgewise sometimes when the jaws get going.

- Distance: These individuals are within simplex distance of each other, but *prefer* to use the repeater so that someone else can join in.

I know the simple answer would be to call them up on the phone and tell them what is going on and what changes I would like to see. There's only one problem. They aren't breaking the law, but I feel the quality of conversations taking place is quickly degrading the image of the repeater to be that of CB land (and 2M as a whole).

In the past 4 months, I have had to turn the repeater off three times for up to a week to try and get the message through. I have publically announced that the repeater sounds like a CB set and I want it to stop. Those who are the culprits don't even understand that it MIGHT be them.

Has anyone else had a similar problem? If so, any ideas on a diplomatic fix?

Correct. But the beepers seem to feel that it's more important that 40%
do use it.

And besides, whether one chooses to use it or not is irrlelavant. The
issue here is whether CW continues to have the neccessary merit to
continue it's current status as being legally-required knowledge for
obtaining a government-issued radio license.

Hello everyone. I live in Guam. If you don't know where that is, it's as far from civilization as you can be stationed by the military... There are no real ham stores within 1000 miles. I'm looking for a good condition used or new ICOM PS-30 Power Sulpply. Unfortunately Guam doesn't have much except TYHPOONS (Fern is 300 Mile from us now) and brown tree snakes(they're everywhere). If you have a PS-30 to sell or have seen one on some amateur store shelf or know of someone that's willing to sell one.

Please E-Mail at : tivey@kuentos.guam.net

I've tried to call AES, HRE, HRO and some other stores in QST but Phone calls to the States are about $1.50 and minute. Thanks for reading this and everyones positive response in advance.

In article <Pine.BSI.3.91.961227183818.10143A-100000@solar.eclipse.net>,
Rob Lilley <lilley@solar.eclipse.net> wrote:
>This is getting arcane and esoteric. The issue is simple: CW is a form of
>effective communications using rudimentary equipment which will perform
>well under conditions adverse to complex systems.

Well a bit obscure, but not really so irrelevant to the topic. The
contention was that morse had a practical use in very recent history.
This point was accepted by both sides without any argument. It was
my belief that point was not completely accurate.

Rather, what might have been used was an even simpler system which
has several important properties:

1) It can be reconstructed by anyone having seen the basic idea once;

2) It requires no training to use the first time;

3) It places even less demands on the fidelity of the communication
channel than morse (i.e. duration is not part of the coding scheme);

4) The communication channel can be aural, physical, electrical, or
any other medium which can be put in a binary state;

5) It has a lower data rate than morse, but not enough to matter
for limited use.

So this tap code is "a form of effective communications using
rudimentary equipment which will perform well under conditions
adverse to complex systems" also. Further it requires no training,
unlike morse. So, if everyone in the US were given this tidbit of
information as part of first aid classes, or any other related
activity training, then on that unlikely day when someone is stuck
on a sinking boat with the mike having been swallowed by sharks,
they can rip off the cover of the radio with their bare hands and
use a fishhook to key the PTT using this "emergency" tap code.

> Those who *master*
>radio communications should have a working knowlege of it.
>
>Rob lilley

Those who *master* radio communications should know how to use the
right mode with the right equipment in the right circumstances or
know how to synthesize a working combination. There is nothing
special or unique about morse code. It is one code among many and

CW is one mode among many. We do a disservice when we elevate morse code and CW above other radio communications knowledge and emphasize code testing versus theory testing. We are telling would-be hams, the wrong thing about what's important in radio communications.

In my view, radio communications is about transferring information promptly, reliably, and accurately, between two or more desired points that are not connected by wire with effective and efficient use of available resources. While ham radio communications is about having fun and being innovative and resourceful while doing radio communications. Code and CW have a prominent place in this scheme, just not the premier one. You can't be innovative and resourceful if *all* you know is 50wpm code, but you can be if you know *some* radio electronics.

When I hear or read someone worrying about the no-code techs or no-code hams to be, that someone also often decries the theory tests as jokes and appears to be counting on the code test as the last line of defense against the "unwashed hordes". This pushes them into unreasonable, extravagant, and sometimes indefensible statements about the benefits of morse and CW. (At least one reason for these unending debates.) Why leave the theory test in purgatory? Let's get serious about making them better.

: in its usage compared to HF. Not to minimize its value: VHF is great.
: But only HF offers long range communications at modest cost.

Well, there's a heck of a lot more going on at VHF+ today than there was back in the 60s, when I got into hamming. We often had a 6/2 meter setup at Field Day, but back then it was pretty much CW and AM; no repeaters, no packet.

Judging from what goes on at the local club, you'd think that repeaters and VHF packet were the only modes permitted. It's no wonder that new hams who enter at the no-code Technician level get bored and drop out of the hobby. So, I've been talking to some of the more technically-oriented members about stirring some interest in weak-signal work. We are also trying to get more members of all license classes interested in contesting, in general, and I'd like to see us get a couple of yagis or quads for 6/2 up in the air so we could participate in one of the VHF contests.

I'm working on getting a member of WSWSS to speak at our monthly meeting, and hope that will generate some interest.

If you don't believe that DXing at VHF+ is interesting, look at the results of one of the ARRL VHF contests; in particular, noting the number of Advanced, Extra and OT callsigns among the participants.

: No... the AUTISTIC Hams - a group incapable of learning code.
: might be OK except for their learning disability.

Look autism up in a medical dictionary. You will find it is a
preoccupation with fantasy as a mechanism to escape reality.

Sounds like those that claim they cannot learn the code. The ability
is there - the desire isn't. So it is rationalized away as some sort
of learning disability.

By the way, if a person REALLY has a disability that keeps them from
being able to learn the code - then the code requirement can be waived.

Bill

William M. Pasternak (newsline@ix.netcom.com) wrote:

: One of the things that has become obvious in the past several years is
: that most -- though not all no-code Tech's are hams in license only.
: They are not the traditional ham with a deep rooted interest in ham
: radio. Rather, they are communicators who want to communicate
: reliabally -- at minimum cost -- with family and a few close friends.

: They are not joiners. They do not join the ARRL or any other national
: political activist ham radio group. They do not join local clubs.
: They do not financially support repeaters. To them, ham radio is
: nothing more than an inexpensive alternative to a cell-fone; and as
: such they have no abiding comitment to the service.

There's an excellent 220/440 linked repeater system here in the Inland Empire that's a living testimonial to the above. I stopped monitoring it a few months ago, because there is a handful of hams who are on there *constantly* at various times of the day. They hold lengthy conversations on the repeater, and it's obvious that they are communicating from fixed-station to fixed-station. You'd think that they never heard of simplex, much less a telephone. Of course, they'd have to *pay* if they used the telephone. After the fifteenth time I heard one person on one weekend, I set the scanner to bypass that frequency.

Annual dues are coming up the first of the year, and I'm letting the repeater owner know why he won't be getting mine.

: I think we are dealing with a different mindset than ever before in ham
: radio and in creating the codefree Tech, we have really created a
: separate "communicator" radio service where current hams who own
: repeaters are "service providers" providing a public utility at no cost
: to the public.

: Any thoughts???

Good points; I'm sure you'll hear from several repeater owners on this issue.

Robert Barron (barron@liant.com) wrote:

: One thing that I think has been determined with some certainty is that
: no-code Tech's are less likely to join the ARRL. Some local clubs may
: have
: similar data on their membership. I don't think that this is merely a
: reflection of the no-code license but also a reflection of the general
: public today. Younger people especially are less likely to join
: "organizations". I wish I could remember the sources but I have read
: a number of articles about this. It's not just Amateur Radio that is
: affected by this.

I would have been inclined to agree with you re: ARRL membership, then I decided to run the stats on our local club. I have access to this data and Treasurer and maintainer of the membership database. Here are the results:

Out of 185 club members, 96 are ARRL members.

14 are Extras
17 are Advanced
14 are Generals
14 are Tech+
8 have no license, and, are you ready for this?

29 are no-code Techs!

While we are an ARRL Special Service Club, I wouldn't say that we pushed ARRL membership excessively.

Interesting! You learn something new every day, I suppose.

Thanks for the clarification, Tom. I do recall that, now that you mention it. It appears that the government feels there is adequate proof that anyone who is capable of answering the written test will be able to get to 5 wpm. I agree with them. Simply memorizing the code gets you close.

I don't recall anyone asking you (JK) to petition anyone. You can
label my (the no-code test advocate's) arguments whining or
anything else you like. It doesn't change anthing, it
won't make us go away and it won't stop the change
at a time in the future. I (we) will file when I (we) think
appropriate. Until then, this is the rec....policy newsgroup
and we'll use it as such to voice our position.

>If me, a 60 year old Grandma, can learn code anybody can so stop the
>whining you wimps!!

Thanks Grandma for your thoughtful reply...but if you check my
call in the FCC database you'll see I too have been there
and done that so your asking me to stop whining is certainly
misdirected.

WHY?

What is it that makes the person who knows Morse a better
radio communicator than someone who doesn't?

What VALUE does it provide to those that know it versus those that
don't...as measured in terms that are quantifiable or necessary
in order to be an effective radio communicator?

Having a working knowledge means what? 1 wpm, 10, 13, 20???

: theory, is there if you know it, and choose to use it. Some hams may opt
: to purchase reliable, tested, commercial equipment instead of building,
: just as some hams may opt to use SSB or PACTOR instead of using CW.

Exactly, a point I cannot seem to get through to the no-code adherents.
These days, BOTH requirements are artifical. But, they are what set Ham
radio apart from CB and GMRS.

Bill

Well if we actually honor the treaty we should have a requirement. BUT
the U.S. has a long history of ignoring international treaties. We
ignore treaties that have more important ramifications that the ITU.
So why won't we ignore this one?

And wall to wall Voice, data, SSTV, RTTY, Packet, etc etc etc. Problem
is, if high speed datamodes were available, contacts could be more
reliable and more efficient than CW. That would be a real use of
bandwidth.

I also may be wrong but it is my understanding that the morse
requirement for a General Radio Telephone license is no longer there.
These are people fixing and designing communications equiptment who no
longer use it.
Hell we are only communicating with the darn radio.

A pretty picture you paint of gloom and doom. Unfortunately that will
only happen if the Pro-coders throw up their hands and give up on the
hobby because they may believe the same way that you do. why not start
now and make plans for dealing with the crowded bands. Why not make
the written test a real test so that the unwashed masses will be les
likely to CB around all of HF.
You see the choice is really in your hands and if you throw them up in
disgust when you and those like you loose the debate and resort to I
told you so tactics the you will have no one to blame on the band
conditions. If you choose to be pro-active and embrace the change and
the good people that will come with it, then perhaps we can prevent
what happened to CB.
Let us all join together and plan for the obvious future.
Let us also encourage the proliferation of highspeed data modes to
replace CW in emergencies. After all aren't we out to save lives and
property in such cases? Or are we out to prove how good a keyer we
are?

Sorry, but you are reading more into it than is there. The pro-code
crowd are only saying that you need to learn code at a minimum level.
You can operate SSB on 10 meters with a tech+ license. And 5 wpm should
take less effort than memorizing the answers to the questions on the
Novice and Tech exams. When you have the code memorized, you are already
close to 5 wpm. That is less than one character every two seconds.

>>...they have no abiding comitment to the service.

Wow...I (along with Jim KF6CR) live in repeater-rich Southern California. I must be scanning the wrong frequencies and have severe personality disorders: I hold a measley Technician License - but I seem to have "broken" all those above assertions.

I immediately joined three local Amateur Clubs when I got my license. I joined the ARRL. I teach classes in Emergency Traffic Handling both for Amateurs and GMRS licensees. I run an Official Bulletin Station of the ARRL - a landline BBS. The Club that Jim is affiliated with - Citrus Belt Amateur Radio Club - is doing marvelous work for the benefit of the entire State of California. I am involved in a 2 Meter Repeater that handles over 5,000 public assist/highway emergency calls annually.

Now I know we don't want this thread to get into "personal" exceptions to what was stated anout Technicians...but the frequencies I regularly monitor on 2 Meters, 220, and 440 simply aren't what were described in the original post. Sure, there are abusers of this privilege. But pervasive and abhorrent? Not in my sphere of influence.

>
> Any suggestions?

An amateur here in KL7 land had a similar problem some years ago, though
I don't think any fiber optics were involved. Despite being a highly
qualified engineer for a local telco, he didn't get too far with the
cable folks in terms of sympathy or help, UNTIL...

he pointed out that he did (legally) operate a TWO-WAY radio station,
and if signals leaked out and caused him interference, then his LEGAL
signals could certainly leak IN as well. I think they really started
listening when he said something about 4Kw into 24 stacked 22 element
Yagis yielding something like 20Kw ERP at their nearby leaky line amp.
He wasn't advocating deliberate interference or anything, but line amps
are expensive... he would hate to see any get smoked.

I guess my point is there should be equal motivation from the cable
company to fix any leaks to protect their system too.

One of the reasons why code is still should, in my opinion, be kept is that it is a learning tool for beginning amateurs. Many of the longer time amateur got their basic training in cw. cw allows you to make your early mistakes one-on-one rather than on a voice repeater for everyone to listen to.

Who would that "select few" be? The licensing authorities "demand" the CW requirement. This is demanded to comply with an international treaty. That's more than a few!

There are many "pro-coders" who can see the need for a no-code HF ticket. The big question is should the entire HF spectrum be opened up to the no-code licensees? A second question is if the entire HF spectrum is opened to no-code licensees, what happens to the band plans?

A no-code HF ticket that allows use of the entire spectrum would require that the present licensing system be discarded to accomodate the no-code extras. All of a sudden we'll just have one license class for amateur radio and it won't be entry-level. There are many who favor some form of HF no-code ticket but without greatly disrupting the current class structure and band plan.

Even so it is not up to us to make the HF code requirement decision. If the no-code proponents would band together in some sort of organization and make a serious effort to lobby the ARRL, the IARU and the licensing authorities world-wide, no-code HF access could be a certainty. All the usenet chatter is just that, usenet chatter, the "select few" don't copy it.

An individual can be a poor communicator no matter what extent his or her knowledge base is. Morse will not make a individual a 'better' communicator, just a more versatile one.

> What VALUE does it provide to those that know it versus those that
> don't...as measured in terms that are quantifiable or necessary

Those who know CW have the option to use it and demonstate discipline and commitment to the service by learning it.

> Having a working knowledge means what? 1 wpm, 10, 13, 20???

Your second phrase suggests a progression. Working knowledge has a different meaning to a novice than it does an expert.

DA 96-2180
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
) In reply, refer to:
Timothy Harold Hoffman) NAL/Acct. 615HF0001
Phoenix, Arizona)

FORFEITURE ORDER

Adopted: December 20, 1996 Released: December 24, 1996

By the Chief, Compliance Division, Compliance and Information Bureau:

I. INTRODUCTION

1. This is a Notice of Monetary Forfeiture issued pursuant to Section 503(b) of the Communications Act of 1934, as amended (the Act), 47 U.S.C. 503(b), to Timothy Harold Hoffman for the willful violation of Sections 301, 303(n), and 333 of the Act, 47 U. S. C. 301, 303 (n), 333, and Sections 15.29, 95.413(a)(4), 95.413(a)(6) and 95.426(a) of the Commission's rules, 47 C.F.R. 15.29, 95.413 (a)(4), 95.413(a)(6), 95.426(a). The violation resulted from Timothy Harold Hoffman's operation of a radio transmitter on amateur radio service frequencies without a valid license, failure to allow inspection of the radio station by authorized FCC personnel, willful and malicious interference to radio communications of licensed stations, and operation on CB channel 36, 27.365 MHz, to transmit one-way communications and material to amuse or entertain.

2. The amount of forfeiture for this violation is $6,000.

II. BACKGROUND

3. On May 14, 1995, agents from the Douglas Field Office of the FCC's Compliance and Information Bureau (CIB), using mobile direction finding techniques, detected radio signals on citizens band channel 36, 27.365 MHz J3E (lower sideband), coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The transmissions consisted of retransmitted signals from an amateur radio service repeater on 147.24 Mhz. These were signals received by Mr. Hoffman, who then used radio transmitting equipment to re-broadcast the material received. The Commission's agents observed the following violations from 8:05PM to 8:50PM MST, and from 8:55PM to 9:15PM MST: transmissions of one-way communications, which are prohibited by 47 C.F.R. 95.413(a)(4), and transmission of material to amuse or entertain which is prohibited by 47 C.F.R. 95.413(a)(6).

4. On May 15, 1995, agents from the Douglas Field Office, using mobile direction techniques, detected radio signals being transmitted on 146.34 MHz, coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The operator making the transmission used the amateur radio service call sign N7ZZT. The agents checked FCC records and found that this amateur radio service call sign was not issued to Mr. Hoffman, and no amateur license has ever been granted to Mr. Hoffman. Transmissions were observed at 7:44 PM and 8:21 PM MST. At 8:21 PM MST, after positive direction finding results indicating the transmissions were being emitted from Mr. Hoffman's residence, the FCC agents attempted to inspect the radio station at 911 West Highland Avenue. An adult male that came to the door admitted to being Timothy Hoffman and did not allow the agents to inspect the radio installation. Mr. Hoffman would not confirm or deny the radio operation when asked by the FCC inspectors. Further transmissions from the residence ceased immediately after the attempted inspection.

5. On June 26, 1995, the Douglas Field Office issued an Official Notice of Violation (NOV) to Mr. Hoffman. The NOV outlined the violations of the Act and Commission's rules set forth in paragraph 1, above. Mr Hoffman responded to the NOV by letter dated July 5, 1995, in which he admitted that he was responsible for the violations. On September 3, 1996, Mr. Hoffman was issued a Further Notice of Apparent Liability that proposed a forfeiture in the amount of $6,000. By letter dated October 1, 1996, Mr. Hoffman requested a reduction or elimination of the forfeiture.

lll. DISCUSSION

6. In his response letter, Mr. Hoffman states that, due to child support payments, tax liens, and a garnishment of wages, he cannot afford to pay the forfeiture. We have carefully evaluated the information submitted by Mr. Hoffman. We have determined that the garnishment information is the only objective evidence submitted by Mr. Hoffman that reflects that he is making current payments to meet financial obligations. After weighing this garnishment against Mr. Hoffman's documented income, we have concluded that he has failed to adequately document his claim of inability to pay.

7. In view of the foregoing, we affirm the $6,000 forfeiture amount previously assessed.

IV. ORDERING CLAUSES

8. Mr. Hoffman has violated Sections 301, 303(n) and 333 of the Communications Act, 47 U.S.C. 301, 303 (n), 333, and Sections 15.29, 95.413(a)(4), 95.413(a)(6), and 95.426(a) of the FCC Rules and Regulations.

9. Accordingly, IT IS ORDERED, pursuant to Section 503(b) of the Communications Act, 47 U.S.C. 503(b), and Section 1.80 of the Commission's Rules, 47 C.F.R. 1.80, that Timothy Harold Hoffman IS LIABLE FOR MONETARY FORFEITURE in the amount of $6,000 for willful and repeated violations of the above rules. The amount specified was determined after consideration of

the factors set forth in Section 503(b) of the Communications Act.

10. IT IS FURTHER ORDERED, pursuant to Sections 1.80(f)(3) and (h) of the Commission's Rules, 47 C.F.R. 1.80(f)(3) and (h), that Timothy Harold Hoffman must pay the full amount of the monetary forfeiture amount of $6,000 within thirty (30) days of the date of release of this order. Forfeitures shall be paid by check, money order or credit card drawn on a United States

financial institution payable to the Federal Communications Commission. Please place the NAL/Acct. numbers on the remittance and mail it to:

Federal Communications Commission
P. O. Box 73482
Chicago, IL 60673-7482

11. Any application for review or petition for reconsideration of this decision may be filed within 30 days from the release date of this Order in accordance with Sections 1.115 and 1.106 of the Commission's Rules, 47 C.F.R. 1.115, 1.106, and mailed to:

>opposed to HF.

OK. Well, as I said before, try 160 meters. But you are still telling me that working DEEEX on VHF is doing it 'the hard way'. Which is contrary to the popular idea that it's time hams stopped doing things the 'hard way' (CW) and get with the more modern technologies. Why don't you want to modernize and start doing things 'the easy way' ? You did say 'HF is for sissies' didn't you ? Does that imply you think you are a sissy ? Talk to a few of the people on the top of the DXCC honor role and ask them how unchallenging HF is.

>Why do I want HF. The same reason everyone does. For easy
>International contacts. To talk with others in different cultures on a
>regular basis with a wire and a decent radio as opposed to the mega
>array and mega buck radio required to do so on VHF.

Now you want to do things the 'easy' way. Use email. You can talk to anybody in the world with little or no effort via email. I worked 2 stations on 160 meters in Europe over the weekend, but I got email from 50 other stations in Europe. Much easier. You obviously haven't seen too many HF ham stations. In 2001 you may be able to make international contacts on SSB with your wire in the tree, so there's no hurry to rush the no code HF thing thru, you still have a few years to wait. See your amateur radio handbook under 'sunspot cycle'.

Your local farm store should have it. Ask for Bull Shampoo.

I heard, that peanut butter did something similar at microwave level.

Do you expect that there would be problems caused by people *trying*
to use Morse Code if there were no government receiving speed test?
If so, then an endorsement requirement may make sense. I don't think
that there would be a problem of hordes of unskilled people trying to
use Morse and jamming up the lower portions of the HF bands. It would
seem to me that the only relevant test is whether they are able to make
a contact using it or not. If they can, then defacto they're qualified,
if they can't, they'll soon stop trying, and won't pose a problem for
those who can. It would appear to be a self-regulating system. A
license endorsement seems superfluous.

It seems to me that awards for copying ARRL speed runs would be
sufficient goalposts for those wishing to master Morse. And it
would certainly appear that being able to do well in CW contests
and CW Dxing would be sufficient incentive, for people who want to
use Morse, to improve their skills. A government endorsement would
seem to be just another burden on VEs and an already overburdened
FCC, and another layer of complication on an already too complex
licensing system, which would have no real benefit to the amateur
community.

Now if you have reasons which make you think that those with
limited Morse skills trying to operate Morse would be a problem
for the amateur community, I'd like to hear them. I'd have thought
that a few enthusiastic people trying to develop their Morse skills
would be welcomed on the bands by the current crop of Morse users,

IE a bit of fresh blood to be tutored and nurtured rather than being pushed away and turned off to the Morse culture because they haven't passed a government receiving speed test. We're constantly told how friendly and helpful CW operators are, this would seem to be an opportunity for them to prove it.

Note that I am not strongly opposed to your idea, I just think it is unnecessary, and another layer of government red tape which serves no useful purpose.

Ideally, what I would like to see is a single amateur license class with question areas stressing electrical safety, technical compliance, and operating practices. A strong background in rules and regulations and radio theory would be needed to assure an applicant could understand and comply with those things of course.

I've made suggestions before on the sort of exam I think would be required to address government concerns in those areas. I would envision something structured like a state electrical contractor exam or a Navy nuclear operator certification exam (though not quite that rigorous), in that it would consist of a number of the dreaded "word problems", IE scenarios, to be solved and would allow use of reference books and calculation tools of the nature a working amateur or engineer would use to solve the problems in the real world.

What we really want to test is whether the applicant can recognize problems for what they are, and if he knows how to approach their solution in a real world manner. We don't really care to test his memorization skills since those are pure rote and don't demonstrate any real understanding. Note that the answers would continue to be in multiple choice format to avoid grader bias and to ease the burden on the VEs, but they would be written so as to not be obvious to those who don't understand the situation posed.

(This can be done, it just takes a bit more sweat by the question pool providers. One particularly easy way to do this is to group all the questions together and all the answers together rather than assigning 4 possible answers directly to each question. The examinee would have to first determine the answer, then find it in the answer list and write the question number to which it applies in the space next to it.)

Some say that it would be too large a step from an unlicensed status to full licensed amateur status. Perhaps they are right. So I would embrace a second license class, differentiated from the first in privilege by a low power limit, which could be considered an entry class. Carl uses the terms apprentice and journeyman for the two classes. That's Ok by me since it tends to have a flavor of their intended purposes.

Power level, rather than subbands or mode restrictions, would seem to be the logical differentiator since low power operation is less likely to cause problems for other amateurs, the public, or other radio services, than any other type of restriction which could be placed on the apprentice class, yet it would allow the apprentice to get real world experience with all the varied facets of amateur radio while preparing for his journeyman license. I have in mind a power limit on the order of 10 dbm/Hz of occupied spectrum. And I'd expect an apprentice licensee to understand what that means.

I wouldn't go the way Canada has chosen to go and prohibit the apprentice from building equipment. I think that goes too far, and basically abandons what amateur *radio* is supposed to be about. I might suggest that any such homebrewing should be limited to using no more than a 12 volt DC power source, however, just in order to reduce the chance the apprentice might harm himself while experimenting with circuits.

>station.

Well, that's interesting. I wonder just how average your average ham
station is. For a lark, I decided to go through the database of my amateur
equipment to see what it all cost. Comes to about $4600, and I dare say
my station is more elaborate than most. That figure doesn't include
my computers or my test equipment or my parts bins or any of my ongoing
experimental setups, but does include a legal limit HF station covering
160m to 10m, a satellite station for modes B, L, S, and the Microsats,
two VHF/UHF mobile setups and a HF/VHF mobile setup, a 70 foot Rohn tower,
packet and other digital modes capability from HF Clover to UHF 56kb,
assorted antennas for all the above, and the widest coverage UHF repeater
in Georgia.

Of course about the only things I've bought *new* are the IC-706 that's
in the mobile and my HAL P-38 card. For example, my HF station is an
IC-735 ($600) and a MLA2500 ($450) that I found at hamfests. That's
almost 5 times less than you suggest, but it works just fine. Much of
my VHF/UHF gear is converted commercial surplus bought at auctions or
homemade (average cost $50 to $70). The tower I got for taking it down
and relocating it. Etc. I think you are describing the station of the
800 number amateur and not that of the average amateur. It would be
interesting to hear what others think they have invested in their
stations.

Practically any time the contesters pause to go to the bathroom. :-) The majority of hotshot contesters appear to be in their 30s, 40s, or 50s, but when they're offline, the geezer to youngster ratio soars. (Note, I'm nearing geezerhood myself.) This shouldn't be a surprise given current HF licensed amateur demographics. While the average age of US amateurs has dropped from 59 to 52 since the code test free Tech was instituted, many of the younger people brought in aren't on HF (for what should be an obvious reason).

>>I know of no hobby that is so predominantly comprised of
>>older people than this one.
>
>Amateur radio has always been, and will continue to be, an older,
>financially-affluent white-male hobby.

False. Try looking up the ages of the founding members of the ARRL at the time they became amateurs. Up through the 1920s, the bulk of amateur radio operators were in their teens or twenties when they entered amateur radio, and the churn among licensees was very high, keeping the average age low. The average crept up a bit in the 30s as amateur growth stalled, but after WWII a large influx of discharged servicemen joined the amateur service throughout the late 40s and 50s, pulling the average age back down again. It wasn't until post-68 that we started seeing a real greying trend in amateur radio, and particularly a greying trend on HF.

Prior to 68, most amateurs weren't what I'd call affluent either. Most weren't subsistence level either of course. They were the children of middle and lower middle class parents. As amateur radio has greyed, the population of amateurs has primarily become one of the settled middle class since people in their early 50s are traditionally in their peak earning years.

The only thing you got right is that amateur radio has been, and still is, dominated by white males. There are a number of reasons for that, but primary is that during most of amateur radio's

existence there has been extreme prejudice against minorities
and women in upwardly mobile fields. And unfortunately, amateur
radio continues to be one of the last bastions of that prejudice
and bigotry, as tuning across 75m any evening will demonstrate.

>>The odd thing about it is that I don't
>>remember it as being nearly this bad when I was a teenager in the hobby,
>>back in the late 60s.
>
>Those people in their 60s today where in their 30s back in the late
>sixties, so I tend to think you wouldn't have seen it.

Right. The large population growth in amateur radio from about
52 to 68 was mostly among young people, teenagers, returning
servicemen, etc. There was a leavening of older amateurs from
the 1930s era and before, but they fell as a percentage of amateurs
to around 10% by 1968. (There were roughly 16,000 amateurs in 1934,
and roughly 180,000 by 1968.)

>>The CW requirement tends, I think, to keep it that way.
>
>You were doing okay up until this point, when you attempted to link

>amateur radio is >not< related to CW. Its related to >radio<.
>Radio isn't sexy any more. Thirty years ago amateur radio was "high
>tech" in many people's minds. Today, its low-tech.

That is part of the problem. Amateur radio has been far too stagnant
technically on HF and now is low tech to a rather shocking degree.
OOK Morse is the premiere example of that. The last major technical
advance on HF was the wholesale conversion to SSB in the late 50s to
early 60s (note, during a period which saw a massive influx of younger,
fresher, minds into the service). Post-68 there have been no wholesale
changes in HF amateur radio. Modern digital modes are creeping in, but
are hamstrung by antiquated rules and by a lack of interest by many of
the "traditional" HF hams. (The fact that we call them "traditional"
says a lot about amateur radio progress, little of it good.)

>>Busy working
>>people probably lack the time to master 13 WPM CW, and have other hobby
>>alternatives, such as the internet, that do not require them to do so.
>
>Let's try this: "Busy working people lack the time to master the theory,
>and have other hobby alternatives, such as the internet, that do not
>require them to do so."

Except we know that's false. The dramatic jump in the number of Techs
we saw when the Morse barrier was stricken down for them shows that it
is primarily the Morse test that has been the factor keeping people from
joining the service, not a theory exam. The Novice has a pitiful written
exam, but it is shrinking to the vanishing point. It can't be the theory
that's doing it, it must be the Morse exam.

>>Although working people see the relevance of a theory and procedure
>>exam, (and are willing to take the time out of their busy schedules to
>>prepare for and pass them) they tend to view the code test as a
>>non-productive use of their time (which it is).
>
>There is no substantive evidence to support this assertion.

Sure there is. The largest amateur class has no Morse receiving
speed test, the smallest amateur class has the fastest Morse
receiving speed test. The second largest class, Advanced, has
essentially the same theory test as the smallest class. The
only real difference between Advanced and Extra is the Morse
receiving speed test. It is obviously acting as a barrier to
full amateur privileges while theory is not. That would indicate
that people are less averse to learning theory than they are
to increasing Morse receiving speed.

This says something else interesting as well. We're told that
40% of HF amateur activity is Morse. And we are told that a
Morse speed of 20 WPM is considered slow by a good operator.
So why aren't all these people Extras? Either they aren't good
operators, or they have a very poor grasp of theory.

Since Extra theory just isn't much of a step above Advanced at all,
we might conclude that the bulk of this 40% aren't good operators.
Or, we might conclude that those claiming 40% Morse operation,
and that 20 WPM is slow, are blowing smoke. Personally, I have a
suspicion that the bulk of CW operators are in the static General
class, for whom the theory step to Extra is not small. This would
tend to agree with the observation that most of the pro-coders seen
here seem to have a very poor grasp of signalling theory, even to
the point of not understanding that OOK is a form of AM, or in
confusing an alphabetic encoding with the language whose words
it spells.

>1. In Hawaii, I hold regular QSOs with hams in the South Pacific and Asia.
>I'd grow old attempting to do make contact with those same folks if I only
>used 2m.

Perhaps those particular folks, but certainly you can work stations
in those areas regularly if you setup a satellite station. There
is activity all around the Pacific Rim on the satellites. Some of
it is even in CW if you insist on using that. I've contacted every
continent, including Antarctica (Argentine expedition), via satellite,
and my country count is probably around 130-150 (real ITU countries),
though I don't keep score. A lot of those contacts have been long
winded ragchews, others have been like the typical HF hello-goodbye
things. That includes a goodly number in the Pacific area, which is
a lot harder to do from here than from Hawaii due to the orbital
geometry. The mutual windows are very short and infrequent to
some of them, and presently not there at all to a few (come on P3D).
Of course the store and forward satellites moot that if you don't
insist on realtime.

>2. Your "high-speed" keyboard modes are only as fast as you can type. And
>those Pacific and Asia hams don't do digital. Are you suggesting I give
>up my QSOs with those folks because they don't have your mode of choice?
>And even if they did, how fast and efficient is real-time (live) two-way
>digital? How fast can you type error-free?

Perhaps those particular amateurs don't do HF digital, but there are
certainly digital operators in nearly every country of the Pacific
Rim. I've worked many of them. I only type about 120 WPM (relatively)
error free, but I can type ahead while receiving text from the other
station, which can effectively double that rate as far as QSO time is
concerned, and I can use canned descriptions of the station and other
routine things which are a part of most contacts, so my effective rate
is higher still. I can also exchange digital pictures (almost live from
the camera on the computer) as compressed jpegs, and other sorts of
binary files too, which you can't do at all. I find it very useful to
be able to send a Mathcad worksheet, or a schematic, or a picture hot
off the oscilloscope of a modulation constellation when talking about
my latest project. And I can typically do all that running less than
50 watts (often much less) to a wire antenna hung in the trees.

Perhaps slightly surprising, there are also a number of ships at sea
who run digital amateur stations. I had a long chat with an operator

on a Canadian icebreaker for example. I don't recall working a ship
in the South Pacific, but I wouldn't be at all surprised to find that
there are some active. I saw a listing recently of digital stations
in over 200 (ARRL) countries. I'm not sure how that translates into
real countries, but it should be obvious that most anywhere you'd
like to contact probably has a digital operator. And most of them
are delighted to have a long and somewhat technical chat because
they know we won't be interrupted by people wanting a QSL card for
some award.

How To Set Up and Operate A Modern Miracle Radio (by KH2D)

1. Remove Modern Miracle Radio from the box.

2. If Modern Miracle Radio has built in power supply, goto step 4.

3. Plug 12 volt power supply cord into Modern Miracle Radio. Goto step 5.

4. Plug 110 volt power cord from Modern Miracle Radio into wall socket.

5. Plug antenna into connector on rear of Modern Miracle Radio.

6. Plug microphone into connector on front of Modern Miracle Radio.

7. Push button on Modern Miracle Radio which says 'POWER' or 'ON/OFF'.

8. Push button on microphone.

9. Talk.

Sounds pretty tuff to me. Anybody who could make it thru all that without any
written instructions deserves an Extra Class license. No doubt in my mind.....

We would have to assume, Bill, that since the ARRL has access to the same FCC database online that you and I have access to, that they pulled names from there.

I tend to doubt that they pulled names from the VEC "in-process" lists (people who have "passed" an exam yet haven't obtained a license yet) just has they probably didn't pull names from the ARRL Membership "in process" list (those people who mailed their checks to Newington but haven't been processed yet).

The biggest pro is you don't have to learn the code to operate it. The
cons is it range is very limited, seem to run FM only
Happy New Year

Index Publishing Group (for which I've written a few things) has
released Skip Arey's brilliant new book:

RADIO MONITORING - The How-To Guide

Selected by the McGraw-Hill Electronics Book Club!

It's featured at
<http://www.electriciti.com/~ipgbooks/bm.html>

I honestly believe this is the best and most comprehensive book in the
hobby today, and wish I'd written it!

****
Yup! -- I enthusiastically support Index, and any radio hobbyist with a
book project in mind should definitely propose it to the Publisher,
Linton Vandiver. Check "Information for Authors" at

<http://www.electriciti.com/~ipgbooks/ifa.html>

>Ray N8XVG

"Code Quick" is the way morse code ought to be taught to everyone. I bought mine after I got my novice license. Each pattern of "dits" and "dahs" is given a phrase that fits the pattern, with the key letter emphasized. Remembering is almost automatic. I highly recomend it to anyone who has struggled learning code, or is just starting out. You won't be disappointed!

SB DX @ WW $OPDX.285
Ohio/Penn DX Bulletin No. 285

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 285
BID: $OPDX.285
December 30, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1ER/KH6, N2MAU, N4GN, KK6EK, K9UWA, KX9X, G4BUE & DX News Sheet, ON4WW, PS7AB, PS7KM, PT2NP, VK9NS and ZR5DTS for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd (TJ), Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". Also, we would like thank the many who have contributed information over the year (there are too many to list). Without them there would not be an OPDX Bulletin.

1A0KM, SOL. MIL. ORDER OF MALTA. By the time you read this, the operation may be over (SORRY!). A surprise and rare operation (with only a few days notice) took place between December 26-30th.

3W. VIETNAM. DXNS states to look for Unni, LA6RHA, who will be active December 30th for 5-6 days as 3W6RHA, mainly 0900-1200z SSB on 14182 and 14248 kHz. QSL to home call.

8B, KEPULAUAN TUKANG BESI (INDONESIA). Tjok, YB0RX, and a couple other hams are organizing an IOTA Dxpedition here. These islands are possibly a new IOTA and are also known as the Blacksmith Islands. Activity will be from January 3-5th. They will use the callsign 8B8WI. Operation will be on 80-10 meters SSB and CW if they can find an operator.

9X, RWANDA. Mark, ON4WW, will be back in Kigali, Rwanda, as of December 30th. The problem is Mark may have to go straight to a field location (work), which means he will not be active until he gets back to Kigali. If he stays in Kigali, he will be active on 160 meters from the first night on (depending on his workload). Mark states he will try to get a regular 160 meter schedule going. Until then, look for him on 20 meters CW and SSB (split for NA) and 1827.5 kHz (QSX up for EU/NA/SA/AS/OC and QSX 1911-1912 approx. for JA). QSL via ON5NT.

BS7, SCARBOROUGH REEF. There is information being passed around about an upcoming operation to BS7 which is not 100% accurate. Information was passed on to OPDX from a VERY reliable source stating, "....there are still several details which haven't yet been nailed down. This is the reason we prefer to wait until things are less likely to change before issuing any 'official' announcements. Hopefully more (and more accurate) info will soon be forthcoming."

FP, ST. PIERRE & MIQUELON. (Preparing early!) Jack, WA1CFS (ex-N1REU), will be active next August, 1997. Jack states, "This isn't a vacation for me, this is a serious 160-10M, 6M, 2M, and maybe satellite DXpedition." Jack will be operating SSB, CW, and RTTY. If you would like to keep up-to-date on Jack's DXpedition, send E-mail to fpdx@hotmail.com -- write subscribe on the "Subject" line.

KG4, GUANTANAMO BAY. Bill, WT4K, and Rusty KG4AU will be a Multi/Single entry in the ARRL RTTY roundup contest January 4-5th. They will be using Bill's call KG4GC. QSL to WT4K (ex-KQ4GC) via buro or direct with SASE.

P4, ARUBA. John, K9UWA, will be here on vacation and be active January 11-27th. He will be active on all bands with lots of Low Band activity. He will also operate in the CQWW CW 160 Meters Contest using the same call as last year, P40WA. John states he will try to make the sunrise and sunset openings as often as possible to give JA/EU a chance to work Aruba on "Top Band".

PY5/PQ5, MEL ISLAND. This Brazilian island located in the Parana State Group (IOTA SA-047, DIB 24, DFB PR-01 e DFH PR-01) will be active February 20-24th. Callsigns to be used: SSB - PY5AA and for CW - PQ5L. Suggested frequencies: 3760, 7060, 14260, 21260 and 28460 kHz. QSL via bureau or via: PY5AA - LABRE/PR, PO Box 1455, Curitiba/PR, 80001-970, Brasil and PQ5L - LABRE/SC, PO Box 224, Florianopolis/SC, 89010-970, Brasil

QSL INFO AND NEWS......
Paulo, PT2NP, ABRA Director-Secretary, reports on the Martim Vaz Island DXpedition QSL cards saying that all QSO were logged by computer. The photos were selected and the card lay-out was already approved by the ABRA directory. They are currently awaiting for an answer on their request to the IOTA Commitee on giving Martim Vaz Island its own IOTA number in order to print the cards. Once the decision is made, they will order the QSLs and start processing the cards.

V2, ANTIGUA. Matt, NM9H, and Sean, KX9X (ex-KF9PL), will be active from February 12-19th. They will be active during the ARRL DX CW Contest and will be requesting the call V26CW. Outside of the contest, they will be signing V2/homecall, and an emphasis will be placed on 80 and 160 openings to Asia, Europe and Africa, as well as WARC bands. Activity will be primarily CW, although some SSB will be worked. All equipment has been secured with the exception of a laptop computer. QSL to homecall with SASE. Any questions or sked requests may be sent to: nm9h@ctnet.net or kx9x@cris.com

VK0IR, HEARD ISLAND DXPEDITION UPDATE. Bob, KK6EK, sent out a press release (last week) before leaving with a few important points and thoughts about this upcoming DXpedition. The following is an excerept: ".... Heard Island has about the worst environmental conditions anywhere, and the safety of the team must remain primary, ahead of any radio operation. We expect regular 60-mph winds, with gusts to 100 mph. These conditions may delay us, and may shut us down temporarily, or permanently. If the weather, or any other act of God (there is an active volcano on HI!), indicates against our operations, we will have to opt for the safety, regardless of the consequences to radio operations. We know you will understand this..... Our team has a continuing tradition of being gentlemen and ladies on the air. We will be polite and patient to you, and know it will be returned. We expect it to be a fun and rewarding time for both sides...."
Meanwhile, Peter, ON6TT, and Arie, PA3DUU, have arrived in Reunion. The Reunion support crew was there (with the local television) to pick them up. All the luggage has arrived, and the 400 kg which was sent earlier this month from Belgium was checked and found all ok. The two 10-ton containers are there as well. Peter said that it looks like everything is under control! It was also reported, that it might be difficult to operate from Kerguelen and Crozet as all people will be very busy, but the Heard Island crew will think and act differently! By the time you read this, a larger group of operators will have arrived on Reunion, on December 29th. Loading of the containers on the ship headed for Heard Island will not be done before January 2nd.
ADDED NOTE: All OPDX InterNet Subscribers will receive all the complete up-to-date news releases as an additional bulletin.

ZS7, ANTARCTICA. The following is an item extracted from the South African Radio League Bulletin (29 Dec 96): " Marten Du Preez, ZS6ZY, will be one of the 78 guests leaving South Africa for the Antarctic on January 7th. Marten will be operating from a special room allocated for Amateur Radio operation on the bridge of the Aghulus and once in the Antarctic from the new base as well as from the emergency base. Look out for ZS7/ZS6ZY. The group has been invited to travel to the Antarctic as part of the inauguration of South Africa's new base at Vesleskarvet.
For Marten, it is a nostalgic visit. He was deputy leader of the first South African Antarctic Expedition in 1960 and leader of the third SANAE Expedition which erected the original base in 1962."
(ed. By the way, the Aghulus is a Naval Resupply ship that services the South African bases at SANAE.)

VU7, ANDAMAN ISLANDS. From a FAX OPDX received by Jim Smith, VK9NS/VU2JBS, states, "THERE IS A SANTA CLAUS AFTER ALL". The following excerpts are from Jim (ed. All OPDX InterNet Subscribers will receive the complete FAX from Jim and Mani, VU2JPS.): "As most DXers know it is now some 20 months since HIDXA stated its intention to donate amateur radio equipment to Mani, VU2JPS, in Port Blair, Andaman Islands. However, it was to be mid August this year before I felt confident enough to actually consign the three packages by Air Freight to New Delhi (for customs clearance) and subsequent onward Air Freight to Port Blair, Andaman. At 0130 Norfolk Island time on Xmas morning the phone rang and it was Mani in Port Blair.

He excitedly told me that he had received everything, safely and that he was very happy..... A fax was received from Mani, VU2JPS and Mala, VU2MTC. I think you will agree that it says everything and in the spirit of amateur radio, makes the orginal idea of helping Mani and his wife a very gratifying one..... Seasons Greetings 73 de Jim VK9NS/VU2JBS"

ZY0, ST. PETER & ST. PAUL ROCKS (UPDATE). Members of the NATAL DX Group, (Karl/PS7KM and Tino/PT7AA will be signing ZY0SK [SSB] and ZY0SG [CW], respectively) will be on PY0S starting operations around January 25th, with activity lasting for about 2 or 3 weeks. Their arrival and departure depends on the fishing boat. Activity will be on all bands, CW and SSB, and they will be using the usual DX frequencies. There will be no 160 meters operations. QSLs for CW contacts go to PT7AA and for SSB, PS7KM.

You imply that you want an intelligent debate, and you even say so when you respond to flames. I've tried to accomodate you in a couple of posts, and you've seemed to ignore my posts and responded to the flames by saying, "I'm ignoring these irrelivant flames." (It's funny how you ignore such posts by responding to them.) You take it even further by stooping to the level of that which you openly dislike, and engage in trolling yourself!

Go figure.

Once again, Jim and (whoever else constitutes the we) know with
complete certainty that "most extras memorized the question pool."
Jim's comment again stems from the need to portray all
those opposed to CW testing as being of little worth (IMHO).
The effort to stereotype is unending on Jim's part it seems.

I was watching a droid give a demo of one of their computers.. You
should have seen him.. I was mumbling the answers to myself when he
was sitting there for 20 minutes going "uhh.. I believe so." Questions
to make a sales droid nuts:

Is the monitor interlaced or non-interlaced?
Is the memory 30 or 72 pin simms?
Is the board EISA or VESA?
Does the serial card have 16550 or 8550?
Is the hard drive IDE or SCSI?

These questions are "DUH" to us but just watch the RatShack people go
crazy when you ask em!

Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
) In reply, refer to:
Timothy Harold Hoffman) NAL/Acct. 615HF0001
Phoenix, Arizona)

FORFEITURE ORDER

Adopted: December 20, 1996 Released: December 24, 1996

By the Chief, Compliance Division, Compliance and Information Bureau:

I. INTRODUCTION

1. This is a Notice of Monetary Forfeiture issued pursuant to Section 503(b) of the Communications Act of 1934, as amended (the Act), 47 U.S.C. 503(b), to Timothy Harold Hoffman for the willful violation of Sections 301, 303(n), and 333 of the Act, 47 U. S. C. 301, 303 (n), 333, and Sections 15.29, 95.413(a)(4), 95.413(a)(6) and 95.426(a) of the Commission's rules, 47 C.F.R. 15.29, 95.413 (a)(4), 95.413(a)(6), 95.426(a). The violation resulted from Timothy Harold Hoffman's operation of a radio transmitter on amateur radio service frequencies without a valid license, failure to allow inspection of the radio station by authorized FCC personnel, willful and malicious interference to radio communications of licensed stations, and operation on CB channel 36, 27.365 MHz, to transmit one-way communications and material to amuse or entertain.

2. The amount of forfeiture for this violation is $6,000.

II. BACKGROUND

3. On May 14, 1995, agents from the Douglas Field Office of the FCC's Compliance and Information Bureau (CIB), using mobile direction finding techniques, detected radio signals on citizens band channel 36, 27.365 MHz J3E (lower sideband), coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The transmissions consisted of retransmitted signals from an amateur radio service repeater on 147.24 Mhz. These were signals received by Mr. Hoffman, who then used radio transmitting equipment to re-broadcast the material received. The Commission's agents observed the following violations from 8:05PM to 8:50PM MST, and from 8:55PM to 9:15PM MST: transmissions of one-way communications, which are prohibited by 47 C.F.R. 95.413(a)(4), and transmission of material to amuse or entertain which is prohibited by 47 C.F.R. 95.413(a)(6).

4. On May 15, 1995, agents from the Douglas Field Office, using mobile direction techniques, detected radio signals being transmitted on 146.34 MHz, coming from an antenna located at 911 West Highland Avenue, Phoenix, Arizona. The operator making the transmission used the amateur radio service call sign N7ZZT. The agents checked FCC records and found that this amateur radio service call sign was not issued to Mr. Hoffman, and no amateur license has ever been granted to Mr. Hoffman. Transmissions were observed at 7:44 PM and 8:21 PM MST. At 8:21 PM MST, after positive direction finding results indicating the transmissions were being emitted from Mr. Hoffman's residence, the FCC agents attempted to inspect the radio station at 911 West Highland Avenue. An adult male that came to the door admitted to being Timothy Hoffman and did not allow the agents to inspect the radio installation. Mr. Hoffman would not confirm or deny the radio operation when asked by the FCC inspectors. Further transmissions from the residence ceased immediately after the attempted inspection.

5. On June 26, 1995, the Douglas Field Office issued an Official Notice of Violation (NOV) to Mr. Hoffman. The NOV outlined the violations of the Act and Commission's rules set forth in paragraph 1, above. Mr Hoffman responded to the NOV by letter dated July 5, 1995, in which he admitted that he was responsible for the violations. On September 3, 1996, Mr. Hoffman was issued a Further Notice of Apparent Liability that proposed a forfeiture in the amount of $6,000. By letter dated October 1, 1996, Mr. Hoffman requested a reduction or elimination of the forfeiture.

lll. DISCUSSION

6. In his response letter, Mr. Hoffman states that, due to child support payments, tax liens, and a garnishment of wages, he cannot afford to pay the forfeiture. We have carefully evaluated the information submitted by Mr. Hoffman. We have determined that the garnishment information is the only objective evidence submitted by Mr. Hoffman that reflects that he is making current payments to meet financial obligations. After weighing this garnishment against Mr. Hoffman's documented income, we have concluded that he has failed to adequately document his claim of inability to pay.

7. In view of the foregoing, we affirm the $6,000 forfeiture amount previously assessed.

IV. ORDERING CLAUSES

8. Mr. Hoffman has violated Sections 301, 303(n) and 333 of the Communications Act, 47 U.S.C. 301, 303 (n), 333, and Sections 15.29, 95.413(a)(4), 95.413(a)(6), and 95.426(a) of the FCC Rules and Regulations.

9. Accordingly, IT IS ORDERED, pursuant to Section 503(b) of the Communications Act, 47 U.S.C. 503(b), and Section 1.80 of the Commission's Rules, 47 C.F.R. 1.80, that Timothy Harold Hoffman IS LIABLE FOR MONETARY FORFEITURE in the amount of $6,000 for willful and repeated violations of the above rules. The amount specified was determined after consideration of

the factors set forth in Section 503(b) of the Communications Act.

10. IT IS FURTHER ORDERED, pursuant to Sections 1.80(f)(3) and (h) of the Commission's Rules, 47 C.F.R. 1.80(f)(3) and (h), that Timothy Harold Hoffman must pay the full amount of the monetary forfeiture amount of $6,000 within thirty (30) days of the date of release of this order. Forfeitures shall be paid by check, money order or credit card drawn on a United States

financial institution payable to the Federal Communications Commission. Please place the NAL/Acct. numbers on the remittance and mail it to:

Federal Communications Commission
P. O. Box 73482
Chicago, IL 60673-7482

11. Any application for review or petition for reconsideration of this decision may be filed within 30 days from the release date of this Order in accordance with Sections 1.115 and 1.106 of the Commission's Rules, 47 C.F.R. 1.115, 1.106, and mailed to:

A point well made. Too many in this thread say they will not join the ARRL until the ARRL changes to suit them. An ARRL member's vote counts just the same whether that person is pro-code or not. If more no-code proponents were members of the ARRL the survey results could have been much different.

Here is a summary of news items covered on edition #196 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 3-Jan:
-
1. Merry Christmas, FCC Delays New RF Exposure Compliance Rules
2. KB6ZV Appoints a New ARRL Great Lakes Division Vice Director
3. International Amateur Radio Permit a Step Closer to Reality
4. David Ransome Releases New Version of STSPLUS Tracking Program
5. NTIA Report Says HF Can Accomodate New and Expanded Ham Bands
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Special Event Station Calendar
8. "The RAIN Dial-up" from Chicago
9. RAC Extends Membership Campaign Due to Canada Post Delays
10. AMSAT-NA Sponsors 25th Annual Straight Key Night on OSCAR
11. Florida Man Sentences for Computer Stalking Incident
12. US Department of Energy Installs New Supercomputer
13. Phone Companies Cry Foul Over Flat-rate Internet Access
14. FCC Reviews International Phone Regulations, Too Costly for US
15. "This Week" Seeking Special Feature Producers/Commentators
16. Weekly Propagation Forecast
17. Happy New Year from All of Us at "This Week in Amateur Radio"
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Columbiana County Amateur
Radio Club, which carries "This Week in Amateur Radio" on the
KD8XB repeater in Lisbon, Ohio, serving East Palestine, East
Liverpool, East Rochester, and East Central Ohio on 146.805 MHz.
Presentation of "The RAIN Dial-up" has been made possible by a grant
from Therese Cheney, N0YNQ, of Mounds View, Minnesota.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EST) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
```

Program audio is on the 6.2 MHz analog subcarrier and carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

5014. Anyone have the complete TRS (Transistor Radio Series) from Sam's

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: rnharsh@visi.com
Message-ID: <5a4ibh$ejc@darla.visi.com>
Source record: 208521
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.shortwave,sci.electronics.equipment,sci.electronics.misc,sci.electronics.repair

I've been trying for a couple of years to find the Sam's datasheet for a 1960s vintage GE radio (no numbers). If you have the TRS for the 1960 radios, I can send you a jpeg (or Giff) of the radio if you will please try to identify it. I know it is not worth the effort but it's a sentimental thing!

Cheers

5015. The CW Requirement Favors Retirees

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: "Roger J. Buffington, W6VZV" <rogerjb@ibm.net>
Message-ID: <5a4iku$5b2@nr1.vancouver.istar.net>
Source record: 208522

Anyone ever notice that most of the people you QSO with on HF are retirees? I know of no hobby that is so predominantly comprised of older people than this one. The odd thing about it is that I don't remember it as being nearly this bad when I was a teenager in the hobby, back in the late 60s.

The CW requirement tends, I think, to keep it that way. Busy working people probably lack the time to master 13 WPM CW, and have other hobby alternatives, such as the internet, that do not require them to do so. Although working people see the relevance of a theory and procedure exam, (and are willing to take the time out of their busy schedules to prepare for and pass them) they tend to view the code test as a non-productive use of their time (which it is). Therefore, in great numbers they pass ham radio by, or at best become no-code Techs.

Now, I've got nothing against retirees; I hope to be one myself one day, and lots of these guys are my buddies. But surely none of us think that it is a good thing for our hobby that our hobby has systematically excluded non-retirees.

By the way, if you disagree with what I've written, then ask yourself WHY is it that HF is so overwhelmingly dominated, even on weekends, by retirees? I think you may come back to my theory.

As an interesting corellary to the above, the recent ARRL survey on keeping the CW requirement also contained a systematic bias in favor of retirees. 1) probably retirees with lots of time on their hands are the ones with the leisure time to discover, and respond to, such a poll; 2) the ARRL is to a very large extent comprised of retirees. (No, I don't have figures, but I'll bet I'm right.)

>Larry

I appreciate the learning aspect and don't deny the code's merit as a
form of communication. But if you make a mistake with code while OTA
people would hear it same as on a repeater or simplex.

5017. A program to learn Marse code

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: skubi@rodin.inria.fr
Message-ID: <5a4jao$5b2@nr1.vancouver.istar.net>

Body handling: HTML body converted to readable text

```
(The previous version of this program has already been posted, several
months ago.)

char version[]="$Id: bip.c,v 1.10 1996/03/31 23:25:24 skubi Exp skubi $";
/*
bip.c Marcin Skubiszewski (c) 1996

HOW TO COMPILE bip

bip.c is expected to compile with ANSI C compilers, with C++
compilers, and with K&R (old style) C compilers. With the latter, say
-DOLDCC on command line.

Under Linux and under systems derived from System V Release 4 (SVR4,
for short), bip.c can work with or without Xwindows.

- If you do not have Xwindows, say "-Dlinux -DNOX" when compiling
(this holds even if your system is SVR4, not linux). The resulting
executable will always beep on the console of the machine where it
runs, and will not use Xwindows. It will work regardless of
whether a given machine has Xwindows installed.

- If you have Xwindows installed, you can either proceed as above,
or say -lX11 at the end of the command line when compiling bip.c. In
this case, the executable will use Xwindows or the local console,
according to whether variable DISPLAY is set or not at execution time;
but it may not run at all o machines which do not have Xwindows
installed.

Under systems other than Linux and SVR4, bip requires Xwindows; say
-lX11 when compiling it.

bip has been tested on the following systems:

SunOS 4.1.3 gcc -O2 bip.c -lX11 -o bip
or: cc -DOLDCC -O bip-oldcc.c -lX11 -o bip

Solaris 2.5
(i.e. SunOS 5.5) gcc -O -I /usr/openwin/include bip.c -lX11 -o bip

Linux gcc -O2 bip.c -lX11 -o bip
or: gcc -O2 bip.c -DNOX -o bip

DEC Alpha OSF/1 gcc -O2 bip.c -lX11 -o bip

ESIX (a SVR4 system) gcc -o bip bip.c -Dlinux -DNOX -L/usr/ucblib -lucb -lc

AND WHAT IF IT DOES NOT COMPILE ?
```

Porting

Look above to see whether bip.c has been tested on your system. If
not, some porting may be needed. Just do it, usually it's simple.

If your system is not Linux and you do not have (and have no simple
way to get) Xwindows, bip.c will not run or compile: bip.c uses the X
Windows libX11.a programming interface in order to send beeps. You
must find an interface in your system which allows you to send beeps
of arbitrary durations, and modify bip.c to use this interface instead
of Xwindows. This is harder than porting bip.c to a new platform which
has Xwindows.

Whe you do porting (of any kind)

- you can ask me for help, I will be glad to provide it.
- you are encouraged to consider the results of your porting as your
shareware contribution, and instead of sending money, to send them to me
with permission to redistribute freely.

General thoughts

Check the correctness of your installation of the system. Upgrade if
appropriate (eg., fetch the newest installation of linux).

Specific solutions

If errno.h (or a file included from within errno.h) cannot be found,
just replace the line "#include " with "extern int errno;".

GENERAL DESCRIPTION

A program to learn Morse code. Sends random groups, words from a
user-specified list, or user-provided text.

"bip -H" gives the list of options; "bip -h" gives shareware information

General description:

This program contains the Morse code as in section 30.39 of the ARRL
Handbook 1995, national characters excepted. The encoding is in
global variable morseCode, and its is straightforward to change or
augment it.

When sending externally provided text or words, the full encoding is used.
A newline is treated as whitespace, a blank line is treated as a
paragraph (AL).

When sending random groups, only the specified set of characters is used. By
default, the character set used in French ham exams is in use. See the
description of options in order to change the set. Examples:

bip s=eish5 - only send characters e i s h 5
bip su - use the USA ham exam charset
bip s+bbbd - cause b to accur 4 times more frequently than normal,

and d twice more frequently
bip cw13 "s=.,?/+SK AS="
- send American non-alphanumeric chars & prosigns at 13 WPM
hostname | gawk 'BEGIN{FS="\.";}; {print $1;}' | bip q F- d70
- this should be in your .login (DISPLAY must first
be set as appropriate)

By default, the program sends random groups of five characters. Option
g causes the groups to contain characters instead. Options g
and G used together provide for variable-length groups with [n..m]
chars.

Option F- causes stdin to be sent instead of random groups.
Option F causes to be sent.
Options W- and W consider stdin (resp.) as a list
of blank-and-or-newline separated words, and send these words in a
random order.

Speed: options dw and cw (and the more complicated options
d, c, w, ww) determine sending speed. I highly recommend the Farhneit
method: even if you are a complete beginner, set a fast character
speed ("dw15": 15 WPM or "d60": 60 ms, which is roughly equiv.), and
make the spacing between characters as big as necessary (eg. "c1500":
1.5 s of silence between consecutive chars, or "cw4": 4 WPM overall
speed).

Tone and volume: option p sets the tone (it takes an argument in
Hz). Not all machines allow you to change tone. Option P sets the
volume (it takes an integer argument between 0 and 100: the % of the
maximal possible volume).

Jitter: option j determines jitter, between 0 and 1 (the more jitter,
the harder it is to copy). "j0" means no jitter (the default), "j0.3"
is strong jitter.

Examples of options:

bip dw12 speed 12 WPM
bip dw12 cw5 Fahrein system: each character sent at 12 WPM,
overall speed 5 WPM
bip g3 G10 sends random groups of length chosen
randomly between 3 and 10
stty cbreak; bip q F- dw15; stty cooked
send what you type on the keyboard

HOW TO START LEARNING CODE

You can start with learning e i s h 5, individual characters sent at
14 WPM, overall speed 3 WPM. This is accomplished by "bip s=eish5 dw14
cw3". Then, increase overall speed progressively up to 7 WPM, i.e. to
"bip s=eish5 dw14 cw7" (you do not change the character speed).

Then, you learn similarly t m o 0. Then, you mix in the previously-learnt characters: "bip s=eish5tmo0tmo0tmo0tmo0tmo0tmo0 dw14 cw3" (t m o 0 appear most of the time, the other characters appear six times less frequently); or "bip s=eish5tmo0 dw14 cw3" (all characters equiprobable).

And so on, until you know the entire charset. Then, with the entire charset, you work speed beyond 7 WPM. For example, to practice for American Extra Class, use "bip su cw18". When practicing for an exam, you may use words, eg. "bip cw18 W/usr/dict/words" or variable-length groups, eg. "bip su cw18 g1 G10".

If, at any stage while learning, you observe that you have special problems with some characters, you increase the relative frequency of these characters until the problem disappears. Eg. if you can't correctly copy b, l and AS, use "bip su 's+bbbbllllAS AS AS AS'.

Be prepared to spend lots of time. For example, learning code for the French exam (10 WPM, groups & cleartext, 1 error/minute allowed) takes up to 100 hours.

SHAREWARE INFORMATION

This is shareware. If you use this program, you have to send me a small reward for developping it. Rewards can take two forms: code or money. You do not need to send both.

CODE: improve this program or port it to a new system or architecture, and send me your code, with permission to reuse freely.
Even small improvements or easy ports will be appreciated.
E-mail: skubi@rodin.inria.fr

MONEY:
- USA residents, please send $7 (international money order) or $10 in cash (this amount is $10 because I prefer money orders and because $7 bills do not exist)
- French residents, envoyez SVP 35 FF (cheque ou mandat postal)
- other nations, please send the equivalent of $7 in the currency of your choice (cash or international money order)

Marcin Skubiszewski
24 rue de l'Oasis
92800 Puteaux, France

Permission is granted to the public to modify, copy and use this program, under the condition that this is not done for profit or commercially. Before you distribute a modified version of the program, the following conditions must be met.

- A copy (in source form) of the modified program must have been sent to the original author, with permission to reuse freely.
- The notices "SHAREWARE INFORMATION", including requests to send code or money to the original author, must remain intact in the modified version. No other request for money (or

```
anything) can be added.
- The modified version must contain a prominent notice saying who
has made the modifications.

To otherwise copy, modify or use the program requires a specific
permission. Ask the author.

Contributor: Geoffrey S. Mendelson (N3OWJ), gsm@mendelson.com (testing
on SVR4).

Assuming that the CW is a needed addition to one's versatility.
We'll obviusly disagree on hat I suspect.

>> What VALUE does it provide to those that know it versus those that

>> in order to be an effective radio communicator?

>Those who know CW have the option to use it and demonstate discipline
>and commitment to the service by learning it.

That can be done WITHOUT any need for mandatory CW
testing. If your opinion of being a good ham includes
CW knowledge, that's fine...but the testing of CW just
to demonstrate discipline and commitment
is not the role or responsibility of government
testing.

>> Having a working knowledge means what? 1 wpm, 10, 13, 20???

No-code HF licensee : full privileges/spectrum
Coded extra : full privileges/spectrum
All other licensees retain their current privileges.
>
>>A no-code HF ticket that allows use of the entire spectrum would
>>require that the present licensing system be discarded to accomodate

I as a general can not operate in the extra class sub-band but a
no-code full spectrum/privilege licensee can? That makes me one of how
many novices, generals, and advanced class licensees who not only will
share their privileges with the no-coders but who actually have less
privileges! Put that to a vote anywhere and see what happens.

>>All of a sudden we'll just have one license class

Please see above. There are those who want full HF spectrum and
privileges for no-code licensees. According to some there would only
be two license classes, apprentice and journeyman.

>> There are many who
>>favor some form of HF no-code ticket but without greatly disrupting

No code testing period or a no-code HF license? No-code requirement
what-so-ever would grandfather every tech and tech plus to general.
Aren't the elements more or less the same? What becomes of the novice
ticket or is that no-code also? Do we end up with extra, advanced and
general classes with no entry level classes?
>>Even so it is not up to us to make the HF code requirement decision.

By no means do not end this discussion but at least point it in a positive direction concerning your draft to the ITU. I have seen no dicussion of such a proposal unless 'It's out-dated, I can't, I won't and it don't 'cause it's too damn hard' counts.

What will might this draft lead to? How might it effect the licensing structure in this country? Will the FCC drop the CW requirement if it is no longer required by the treaty? Will the FCC grant no-coders full HF spectrum and privileges? Will the FCC even waste its time considering making a change to the current license structure? Lots of questions to be answered, perhaps a new newsgroup should be chartered to discuss this proposed draft.

Nothing need happen to the band plan...why should it?

>A no-code HF ticket that allows use of the entire spectrum would
>require that the present licensing system be discarded to accomodate
>the no-code extras.

Why, that is totally false. What would require any change?

>All of a sudden we'll just have one license class
>for amateur radio and it won't be entry-level.

Hows that? No one has said that with the end of
morse testing that we need or would discard the current
band allocations on HF for Novice, General, Advanced and Extra.

> There are many who
>favor some form of HF no-code ticket but without greatly disrupting
>the current class structure and band plan.

AGAIN...why would the current structure change? What would force it
to be changed based solelyon no longer testing for CW knowledge?

>Even so it is not up to us to make the HF code requirement decision.
>If the no-code proponents would band together in some sort of
>organization and make a serious effort to lobby the ARRL, the IARU and
>the licensing authorities world-wide, no-code HF access could be a

>certainty.

That is happening...read the following:

My proposal here is to begin
an effort to challenge any position taken by the ARRL that
would sustain continued international treaty requirements
for Morse Code knowledge as a requirement for HF access.

Note, this effort is not targeted at the FCC, but rather is
primarily aimed at making sure a the ITU is made aware that
a significant number of USA hams are opposed to continued
CW testing for amateurs in the 21st Century.

No need to reply now. I'll draft a proposed ITU submission which,
when completed, I'll post and you can then comment as
you see fit. Once we get an agreement as to the final form
of the submission, we can then solicit signators for the
submission.

Lastly, this effort, which may go gainst a formal position of
the ARRL is NOT an effort on my part to start a new organization.
I have nether the time nor effort to do that.

>All the usenet chatter is just that, usenet chatter, the
>"select few" don't copy it.

If you can't see the value (from my perspective) of
continuing the USENET dialog/debate, etc then
so be it...but don't expect me and the others to just
end the use of USENET to forward our proposals.

WHY? The general licese is NOT the same as the TECH in terms of
theory elements. The only ones Tech license holders that would se
an automatic change to GENERAL are those licensed as TECHs
before 1987 (not sure of the year) when the Tech theory test was the
same as that for General. ALL techs licensed after that would still
need to upgrade by passing the General element.

>Aren't the elements more or less the same? What becomes of the novice

Keep novice, keep tech...why change? The theory elements
for each are different.

It's outdated: It is, that is a simple fact and easy to show in terms
of contemporary communications. That hams (many) wish to continue
using CW does not justify the need for ALL hams on HF to know CW.

The other items you note will not be in any document I prepare.

>What will might this draft lead to?

A formal submission to the ITU?

> How might it effect the licensing
>structure in this country?

Sorry, left the crystal ball at home...but seriously, one never
really knows until after its done. My goal is to eliminate the
EXCLUSIVE pass/fail aspect of having a separate CW
test element in amateur test requirements. I have no
objection to retaining incentive licensing.

>Will the FCC drop the CW requirement if it
>is no longer required by the treaty?

Who knows?

>Will the FCC grant no-coders full
>HF spectrum and privileges?

As previously stated above. I don't see the creation of a new
license, rather a change in existing requirements as they are
needed for the current liceses.

>Will the FCC even waste its time
>considering making a change to the current license structure?

Who knows?

> Lots of
>questions to be answered, perhaps a new newsgroup should be chartered
>to discuss this proposed draft.

That's been proposed before...i.e. a rec.radio.amateur.code
or something like that.

We do all our own work and have never heard of commercial maintenance
for ham gear.

>2. Is your repeater accessible to members of your club or is it at
> a shared site with limited access?

The site is a public service of a golf course and we and they have the
only equipment at the site. We get free space and electricity in
return for helping them with their TV and 2-way equipment and recently
gave them a couple of new commercial HT's.

>3. Does your club encourage members to be involved in repeater activities
> or are these activities left to the seasoned pros, commercial or club members?

Anyone wanting to volunteer are welcome but we have a primary person,
the trustee, and a faithful few who do whatever is necessary.

>Thanks in advance for your response.

>73's, Gary, W0AB

Our repeater is W1SGL, owned and operated by Cape cod and Islands
ARA.

"WE'RE BACK", "DXER.COM" "Your Ham Radio Resource Site"
is back on line and ready to provide you with the most
comprehensive ham radio related site on the Internet...

Stop by and check it out..29 indexes. Everything from
DX Clubs, EME, Packet Radio, Scanners, Shortwave, QRP,
Maritime, Callbooks, Contest Calendars, Software, Clusters.
Radio Modifications, Sarex, Mir, MARS and many others.
Many more links have been added and we are now approaching
500 links, with more to come...

In addition to the interactive BBS, we will be adding in
the near future a Ham E-Mail Callbook...

Stop on by "http://www.dxer.com" and let us know what you
think, and what you would like to see added to the ever
growing list of links..

Here in the 9th largest metropolitan area in the US we don't have
the kinds of problems on VHF or UHF that you and your HF buddies
complain about either. Our repeaters are open, our operators polite,
and by and large the discussions are interesting. But we certainly i
hear a lot of bigoted and ignorant behavior on HF. Could it be you
and your buddies? Judging from your remarks here, could be.

: of your machine as a club activity or do you have a commercial radio service
: perform the maintenance?

Yes, when maintenance is required that cannot be done by the person who has
been maintaining them for years. Never heard of having amateur repeater
serviced by a commercial outfit.

: 2. Is your repeater accessible to members of your club or is it at
: a shared site with limited access?

Anyone who wants to go up there *with the maintainer* is welcome to do so.

: 3. Does your club encourage members to be involved in repeater activities
: or are these activities left to the seasoned pros, commercial or club members?

Sure; we also use the repeaters for ARES and RACES activities. Both are
open, and available to any licensed amateur.

->Well if we actually honor the treaty we should have a requirement. BUT
->the U.S. has a long history of ignoring international treaties. We
->ignore treaties that have more important ramifications that the ITU.
->So why won't we ignore this one?

You CAN honor the treaty and STILL NOT have the CW requirement. The
document was written with enough holes in it to let Granny Prichard make
fifteen yards against the Steelers off-tackle. There is a provision that
ANY nation can exempt itself from this requirement if it so chooses.

Alright, you DON'T so choose. If you are real about wanting to let
"no-code" people into the ranks at any level, then you say that one word a
minute is the requirement and you can bring along a chart and you can have
enough minutes until you pass. You have met the LETTER of the treaty, no?
Setting ANY level seems to me to be arbitrary, whimsical, and capricious,
but then again, I live 3000 miles from Oldington by choice.

Yes! You can find it at most hardware stores!!!

It's usually located right between the skyhooks and the mufflerbelts!
Ask for the 5 gallon jug because it keeps forever. Works good on mobile
antenna's too!

Oh yeah....I've been using it for years. As a matter of fact, there is great controversy about it among the contesting an DXing community because its use amounts to cheating.

I don't think they should take it off the market, however, because it's also good on a cracker.

An excellent suggestion. I proposed many months ago Endorsements
for all HF operations including SSB, Digital, and CW. The endorsement
earned the privilege of mode and band segment usage.

However, the suggestion was bombarded with comments about its
complications, the necessary examination of technical information
would require elaborate new test questions, enforcement would be
hard, etc., etc., etc....... And the thread died.

Hope yours obtains a better response.

Yeah, I run into this attitude with my students all the time. "Why do
I have to learn about history when all I want to do is become a
computer programmer?" "Why do I have to take this management class,
I'm going to be a systems analyst?" and so on.

>Someone elsewhere on this newsgroup called me a whiner. Well, I'm

>non-replentishment of our numbers.

I hate to break it to you, but the demise of our hobby has nothing to
do with the lack of numbers. Its all about money. The day the government
figured out they could sell frequencies for billions of dollars was the
day ham radio was told it was living on borrowed time.

>retirees?

Depends on when you're on the air, I guess.

>I know of no hobby that is so predominantly comprised of
>older people than this one.

Amateur radio has always been, and will continue to be, an older,
financially-affluent white-male hobby.

>The odd thing about it is that I don't
>remember it as being nearly this bad when I was a teenager in the hobby,
>back in the late 60s.

Those people in their 60s today where in their 30s back in the late
sixties, so I tend to think you wouldn't have seen it.

>The CW requirement tends, I think, to keep it that way.

You were doing okay up until this point, when you attempted to link
the dreaded "downfall of amateur radio" on to CW. The problem with
amateur radio is >not< related to CW. Its related to >radio<.
Radio isn't sexy any more. Thirty years ago amateur radio was "high
tech" in many people's minds. Today, its low-tech.

>Busy working
>people probably lack the time to master 13 WPM CW, and have other hobby
>alternatives, such as the internet, that do not require them to do so.

Let's try this: "Busy working people lack the time to master the theory,
and have other hobby alternatives, such as the internet, that do not
require them to do so."

Yep, I would agree with both of those statements. Part of the problem
with amateur radio is you have to take positive actions, sometimes
requiring exertion of effort on your part (whether studying theory or
practicing code) to get your license. Most people do not want to do
this. That is why only ~.25% of the US's population has an amateur
ticket while millions more have cell phones.

>Although working people see the relevance of a theory and procedure
>exam, (and are willing to take the time out of their busy schedules to
>prepare for and pass them) they tend to view the code test as a
>non-productive use of their time (which it is).

There is no substantive evidence to support this assertion.

>Therefore, in great
>numbers they pass ham radio by, or at best become no-code Techs.

The codeless license has become the entry-level license of choice.
It grants voice privileges and a wide range of operating privileges
immediately, which is why I think it is popular. In addition, it is
easier to study for than a novice ticket, where you must split your
time between theory and CW.

However, it is interesting to note that a large portion of the
codeless techs that enter the hobby do upgrade their license class.
So much for that "busy schedule" theory you have.

>By the way, if you disagree with what I've written, then ask yourself
>WHY is it that HF is so overwhelmingly dominated, even on weekends, by
>retirees? I think you may come back to my theory.

Because, as an ARRL demographic study indicated last year (or perhaps
the year before), the average ham is a financially affluent white male.
Even "cheap" HF radios cost upwards of $1k.

[more supposition deleted]

So THAT'S what you do with it! I've been using it to fill those nasty
air gaps in my variable capacitors (due to sloppy manufacturing, I
assume), but all that happened was that I had to put vice grips on all
my tuning shafts. Thanks for the tip...

>
>I disagree. Art is the art of communication.

Art is used here in the same sense as in "The Art of Electronics" by Horowitz and Hill. Artisans were the forerunners of engineers, and the usage of art in this context is referring to the art of engineering.

>Science is the technology of building mechanisms to communicate.

Science is used in the sense of scientific enquiry into natural phenomenon, as in the work of Faraday, Ampere, Hertz, Crookes, Heaviside, etc. Science is most definitely *not* engineering. Those are two distinct and very different disciplines. Engineers use the discoveries of science in their work, and scientists often use the fruits of engineering in their work, but it is engineers who build, and scientists who observe and discover principles of natural law.

>Both components
>are equally important, but amateur radio is not just about
>technology. Hence the "international goodwill" clause.

That clause does not exist in the ITU definition of amateur radio. In fact, the content of international contacts is sharply limited by ITU regulations to the reporting of the results of technical tests or to remarks of such an unimportant nature that recourse of other means of communications would not be warranted. That's hardly the stuff on which international goodwill is founded. US regulations are unique in stating a goal of enhancing international goodwill. But the overriding ITU regulations tend to moot that objective.

And in practice, the bulk of amateur HF communications doesn't serve to enhance international goodwill. In fact, much of it serves to enhance international illwill, IE contesting, Dxing, etc which serve to limit any meaningful dialog between people of different nations.

Roger J. Buffington, W6VZV (rogerjb@ibm.net) wrote:

: Mine either. The old canard that Technician hams conduct themselves
: like CBers is so much malarky. Some of the worst operating I've heard
: is by general class and above hams. The absolute worst, of course, is
: by unlicensed individuals.

And we had the troublemakers back in 1966, too. It's just that they had fewer outlets, i.e. HF, to "express" themselves. Fortunately, the FCC cared back then, and we could take some satisfaction in seeing future writeups that noted that their tickets were pulled.

: Frankly, I think there are some who make up stories about how bad the
: VHF operating procedures are to bolster the argument that we need CW as
: a "filter" to keep bad types off of HF. The facts contradict this
: thesis. The vast majority of ops on VHF, at least in Southern
: California, are excellent ops, who behave as traditional hams, i.e.
: courteous, good operating procedures, etc.

Amen to that. With the exception I noted earlier in this thread, most of the VHF/UHF operators would be as welcome on HF.

: I know it's interesting to some. It just isn't interesting to me. And
: I suspect that some people feel the way I do (and some don't.)

Agreed. We're just trying to show some of the newer hams the alternatives
that exist, within the terms of their own license.

: To me (unlike some other people) the facination with ham radio is
: communicating over longer distances than say, a local telephone call.
: This is not all there is to ham radio. It is, however, one of the
: things that tends to attract newcomers. I have seen many potential
: newcomer hams turn off to the hobby and seek alternatives when they
: learn that in order to do this on HF (the best way to communicate over
: these distances) they must learn Morse Code. They don't see the point,
: and there are other hobbies that don't require this. (Like the
: internet).

I look at HF and VHF+ DXing each as a challenge in their own right, and
enjoy both for what they offer. Naturally, YMMV.

: Someone elsewhere on this newsgroup called me a whiner. Well, I'm
: whining about the coming demise of our hobby, from the
: non-replentishment of our numbers. Personally, I've got my Extra
: ticket, and I suppose things will hang together for the 40 or so more
: years I've got left. Or maybe not.

Well, I got some Extra code tapes as a Christmas present, so I need to
finish getting the upgrade that I started back in September. And, with
retirement looming on the horizon in 12-15 years, I share your hope that the
hobby will still be around for some years after that.

5053. Macintosh Morse Code Decoding Software - ANNOUNCEMENT

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: cps@access.digex.net
Message-ID: <cps-ya02408000R2912960021440001@news.digex.net>
Source record: 208560
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,comp.sys.mac.scitech

Discouraged by the lack of CW/RTTY/FAX decoding software for the Mac, I've decided to write my own. It presently only decodes CW, hence the name - Mac Morse Decoder.

It's very preliminary right now, and best of all, it's freeware. I'd like people to take a look at it and offer suggestions, and to test compatability across the various Macintosh model lines. Bare in mind though, it is *very preliminary* right now, I'm calling it version 0.1B.

If you'd like to get a copy, cruise on over to the following URL:
http://www.access.digex.net/~cps/sss14.html

Thanks,

Chris

Hmm...

Maybe we can use these supposedly derogative terms usefully. Remember,
the term "ham" was once a derogative term, and we accept it proudly. In
boating there are the "stink pot" sailors and the "rag" sailors, and in a
sufficient number of cases, they get along just fine. Each recognizes
the preference of the other, and the put-downs are in good humor. Think
we can try that on this newsgroup? Or are we hopelessly adolescent here?

Jim Weir said "Setting any level (of code speed) seems to me to be arbitrary, whimsical, and capricious..."

Take a look through the early books on wireless to see why the code speed was raised from 5wpm to 10 (then higher). Studying the history of radio, and in particular, amateur radio, will answer many of your questions. (The 1912 Radio Act of Congress dictated that an amateur [defined as someone who operates a radio station for pleasure] needed to know code "at a speed of at least 5wpm.")

Weir: "... but then again, I live 3000 miles from Oldington by choice."

What an unusual statement. You let the QTH of the ARRL dictate where you live? Regardless, you error in believing that the ARRL sets regulatory communications policy.

Weir: "If you are real about..." It's a common error to substitute the word `real' in place of `serious.'

Randy I avoid repeaters....I have been a ham for about 21 years now and as with 75 meters I have noticed a decline in " acceptable " conduct. I was even a member of 5.11 some years ago. I dont believe most of us will have much at all to do with the hobby in future years as its getting to sound too much like CB and worse. Frequency wars and personal threts have no place on the air. The code will eventually go by the way side and make hf privilages easier which will increase numbers even more and add a few more bad apples. I somtimes think it is just human nature to act like an child when you get a mic in your hands. I spend more time on simplex and 2 and 6 ssb anymore and wonder what I will do for a hobby 30 years from now if there is no more ham radio. It will just take someone interested in the spectrum and it will be auctioned off for commercial use. Like code ham radio no longer has a purpose, its just a hobby like CB, not a right. Just my oppinion, I dont expect you to agree, but they could shut down all of 2 meters and I certainly wouldnt care...73 de Gary W8PU

Eric KC5??? wrote: " I wonder how many lives will be lost because of the code requirement?"

One could go further and boldly ask "I wonder how many will be lost due to the written exams?" Just think, if we did away with all exams then everyone could get on the rptrs and no lives would be lost at all, correct Eric?

Eric: "I wonder how many have been saved by no-code techs?"

Do you seriously think that only techs monitor rptrs, or that Generals and above ignore calls for help? Hams (coded, at that!) have been saving lives via radio since the creation of wireless. Don't you dare believe that assisting people in need is a recent invention. Every year since radio came into being contains cases of amateurs performing local, regional, state-wide, and interstate emergency work. My earliest records show that in 1913 amateurs bridged the communications gap from a severe storm in the Mid-West that cut off all other forms of comms. How about the tropical storm that hit TX in 1919 and again, amateurs provided the only comms available to that region? Pick a year: '21, '22, '23, et cetera, and I'll give you an example of coded amateurs saving lives. The FCC was so impressed with their amateur radio operators that in 1933 they passed the following message to the ARRL (even then, the FCC used the ARRL to disseminate any and all amateur-related rulings and notices):

March 18, 1933
The ARRL

Dear Sirs:
The Commission takes pleasure in informing you that it has received information commending the amateurs of Southern California for the splendid work done by them in handling communications in the recent earthquate area.
The names ofthe individual licensees who cooperated in the work are not known to the Commission. However, it is known that amateurs have always rendered every possible assistance during times of such emergencies, and it is hardly necessary to add that the Commission believes such service to be of the highest order of importance.
It will be appreciated if you will express through the medium of the ARRL the Commission's appreciation of the prompt and efficient action which was taken by amateur licensees in bringing aid to the stricken area.
Very truly yours, Harold A. LaFount, Acting Chairman

So you see, Eric, hams have been saving lives long before the creation of the no-code technician license.

73,
Jeff KH2PZ / 7

Our repeater itself is serviced by a select group of members (voluntarily), known as the technical committee. Their job is to see that the repeater is functioning properly and is kept running.

The antenna (due to it's location and height on a commercial tower 400' above the gound) is serviced by the owner of the tower (a major communications entity)

>
> 2. Is your repeater accessible to members of your club or is it at

I'm finding 6.912 chrystals

Greetings All!
My friends, living in Paraguay, recently bought a HF Motorola SSB 100
and SSB 1180.
CONATEL (Phone Agency of Paraguay) assigned to them the frequency 6.912
My friends asked to me the favour to help them in finding 4 (four) crystals
for that frequency.
I DON'T UNDERSTAND ANYTHING ABOUT RX/TX, FREQUENCIES, ANTENNAS, ETC...
Let me know how I can help my friends and where I can find and buy 4 crystals
(6.912 MHz) for the above machines (HF Motorola SSB 100 and SSB 1180).
Next January 16th I'll leave to Paraguay and I would like to carry with me
the requested chrystals.

Can the Net help me?

Thanks and Happy Holidays!!!

: do *you* think?? Thanks in advance.

The best money I ever spent on amateur radio, and probably the best
money I ever spent on anything. For 29 years I struggled to learn code,
never getting above 3 wpm. With code quick in 6 months passed 13wpm.

If I practice, I can copy at about 18wpm.

I even can copy higher at times. I heard a friend calling CQ at about 35 wpm,
and answered him at my top sending speed (about 10wpm)*. He was surprised,
but we had a nice QSO.

Geoff.

* my sendng speed is limited by the mechanics of my hand.

All of us who do digital modes, for starters.

Anyone who competes in contests.

Anyone who simply wants to keep a good, and accessible, log.

How many hams need to program
> computers to support their operations?

All of us who digital operations.
All of us who compete in contests.
All of us who want to keep good and accessible logs.

All this alleged importance of computer
> skills in ham radio is a lot of crap. Only a tiny fraction of hams use
> computers for their ham operations. If you need the skill to support your
> interest, you'll develop it, whether it be CW, keyboard, programming, or
> whatever...

OK, fine. So why have a cw requirement but not testing on computer
ability? Computer skills are useful for hams regardless of mode. CW is
irrelevant for any mode but CW. CW is strictly recreational in nature;
it is not a practical way to transmit information, and in fact almost
exactly zero information that is non-recreational in nature is ever
transmitted via morse code. Morse has been abandoned by the military,
banned by MARS, and is not used by ships or the US Coast Guard.

I've travelled all over the country on business, always with my HT. I don't think that no-code techs operate any differently that hams who have passed a CW test. The notion that all the jammers, etc. who can be found on VHF are no-code techs is so much baloney.

It was pretty hard to decipher what you were trying to say, Gary. Your writing skills are so poor that your ideas are hard to pick out of the mush. But I'll try to believe that your post did contain some ideas, and address them systematically. (I apologise if I use too many long words for you).

1. If I'm whining about the CW requirement, it isn't for myself. I have an Extra Class ticket, and have had for years. And for the record, I'm quite proficient at Morse Code to this day.

2. I and others have given sound reasons why we think a Morse Code requirement is detrimental to the hobby. All you've done is whine that it was required back in the old days (when you were walking 5 miles to school in the driven snow no doubt) and therefore should be required now. What is the logic in that? Morse might have been relevant back then. But times change, and so must ham radio, if it is to survive.

3. So far ham radio is NOT surviving very well. Our numbers are dwindling, and with it the future of our hobby.

Drew,
Still at it, I see. They're not, apparently for you, "little" hazing
requirements. They seem to stick in your craw. By the way, you can join
my private HF club. Simply upgrade.

The commercial interests have little interest in HF these days, or hadn't
you noticed?

What is thing you have against anyone who has been breathing longer than
you have. Is Florida THAT crowded?

And my point is, that is the classic definition of a self-selected poll. Who the hell has the time to read and respond to this kind of poll? I'm an ARRL member, and I don't even remember receiving it. The point is that the 6% who DID respond cannot be assumed as representing a random slice of the League's membership, let alone all hams, or all Americans.

Now, mind you, I'm not bashing the League. I think that they meant to do the right thing. But this poll, despite what Mike Deignan wants to believe, and clings to believing, was a self-selected poll, and such polls are not valid.

Well, I disagree. Ham gear in real dollars is far cheaper than it was when I was a kid. The thousand dollar prices you reference are completely bogus because that is the price for new stuff. Sure, younger hams usually get used gear. And used gear is very cheap, just listen on the swapnets.

It is Morse Code that deters new hams, not the price of ham gear. These no-code techs seem to have the dough for $500 HTs and mobile VHF rigs. These are more expensive than say, a used Kenwood 940, which is wildly better than what I used as a teenager.

NO NO NO and NO

The original poster was looking for a product that helps in not onl;y
lowering SWR but helps turn rotators and towers. The product is called,
I think relative bearing grease. I believe you need a left handed smoke
shifter and 100 yards of shoreline to apply it. If I am not mistaken,
you could even make it yourself, if you had a 5 gallon pail of live
steam.

Just trying to help out.

5084. !!!!! Delaware QSO Party !!!!!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <5a5umk$fqi@copland.udel.edu>
Source record: 208591

Finally - the Delaware QSO Party!!

Sponsored by the First State Amateur Radio Club

Who - All radio amateurs in and out of Delaware

When - First full weekend in February (1997: Feb 1 & 2)
Saturday: 1700Z (1200 EST) until 0500Z Sunday (2400 EST Sat.)
Sunday: 1300Z (0800 EST) until 0100Z (2000 EST Sun.)

Where - Suggested frequencies are:

Phone CW
1.860 1.825
3.960 3.550
7.260 7.050
14.260 14.050
21.360 21.050
28.360 28.050

Novice and Technician freqs: 25 kHz above sub-band edge

This does not imply that you may not work any bands you choose,
such as VHF/UHF/SHF. However, as there is only one entry class,
all logs will be judged equally.

How - Work stations once per band and mode.
Exchange signal report and QTH (county for Delaware stations;
state/province/DXCC country for others).

Scoring - There is ONE CLASS for all stations.
Count ONE POINT per PHONE QSO.
Count TWO POINTS per CW/RTTY/Digital QSO.
Multipliers/special event stations: NONE.

Awards - Certificates will be awarded in the following categories:
Within Delaware: first, second and third highest score.
Within each Delaware county: highest score.
Others: first, second and third highest scores.
Further prizes and certificates may be awarded, depending
upon participation and merit.
Certificates and prizes courtesy of Ham Radio Outlet, Delaware.

Submissions-
There are no requirements for dupe sheets, and no forms nor
software offered especially for this contest.

Logs must show date, time, band, mode, station worked, exchange send and received, entrant's call and QTH, and total summary of QSOs and points. You are assumed to be observing the rules of amateur radio and contesting, so that no such written statment is required.

Mail entries within 30 days to: Contest Chairman
FSARC, Inc.
P.O. Box 1050
Newark, DE 19715

Include SASE for results.

E-mail logs with adequate summaries, and any other comment or inquiry to:

radio@udel.edu

Results will be posted through 3830@contesting.com, and e-mailed to NCJ and CQ.

Thanks and LET'S GO DELAWARE!!

5085. The Amateur's Code - a refresher

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5a5uhs$d8i@dailyplanet.wam.umd.edu>
Source record: 208592
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

****
I think we can ALL find fault with ourselves here. We are not just
"ordinary" people - it's our duty to act in an extraordinary way.
****

1) The Amateur is Considerate...he never knowingly uses the air in such a
way as to lessen the pleasure of others.

interpreted: no jamming, no harrassment of others.

2) The Amateur is Loyal...he offers his loyalty, encouragement, and
support to his fellow radio amateurs, his local club, and to the American
Radio Relay League, through which Amateur Radio is represented.

interpreted: be a good person to other hams, and support the ARRL 'cuz
it's our voice in the political arena.

3) The Amateur is Progressive...he keeps his station abreast of science.
It is well built and efficient. His operating practice is above reproach.

interpreted: check your equipment. When someone gives you a bad
report, try to figure out what's causing it. And use minimum power.
And it's time to play spread spectrum SO LONG AS IT DOESN'T INTERFERE
with existing communications.

4) The Amateur is Friendly...slow and patient sending when requested,
friendly advice and counsel to the beginner, kindly assistance,
cooperation and consideration for the interests of others; these are the
marks of the amateur spirit.

Basically, the golden rule. Be kind to others because you'd want them
to treat you well.

5) The Amateur is Balanced...radio is his hobby. He never allows it to
interfere with any of the duties he owes to his home, his job, his
school, or his community.

When your XYL/OM asks you to put the radio away for a while, or you
have to go and walk the dogs, or you have to work a super-long day and
miss Sweepstakes, do it.

6) The Amateur is Patriotic...his knowledge and his station are always
ready for the service of his country and community.

Be ready for the time when the country or town needs us because the
cell sites are no longer functioning. Have everything ready to run on
batteries, and practice emergency communications.

5089. 60-Hz QRM All Over HF spectrum

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: Mike Kelly <AB4YY@juno.com>
Message-ID: <01bbf59a$0f502560$53142209@bootp.lmco.com>
Source record: 208596

I am beginning to troubleshoot a serious 60-Hz noise problem I have here at

this QTH and was wondering if anyone has any knowledge they would like to share with me that would help. Thanks in advance. Oh, I only have intermittent access to these newsgroups but will still try and monitor. My

regular email is: ab4yy@juno.com

The 60-Hz is most readily heard by going to AM mode on HF and tuning up and

down the band. For example, there are high amplitude spots in the following areas: 3.247-3.264MHz, 3.451-3.471, and 3.656-3.674. These are just examples as the entire spectrum is littered with this and in addition there are lots of lower amplitude 60-Hz QRM scattered all over the band. The main areas though, have a signal strength in the S9+ range.

In narrow CW mode, the noise appears to slowly roam up and down the different band areas. For periods of times a narrow area will be quiet then this QRM will roll in.

I used Kevin J. McWilliams (KW5Q) excellent Freeware program "SbFFT" to display the spectrum in the frequency regions in the HF spectrum. I clearly see 60-Hz and multiples of 60 occurring up through the passband (2.4K setting on the Yaesu FT-1000) of the radio. It does appear that the strongest component is at 120-Hz.

Switching between my 160-10 Carolina Windom and a 80-10 dipole doesn't make

any difference. I also checked on an AM radio I have at the other end of the house and I can still hear 60-Hz on it.

The QTH here is in a rural hilly subdivision with large lots. There are high tension transmission lines running past the subdivision but probably no closer than 1 or 2 miles from this QTH. I believe this 60-Hz problem has been here for years but since I work different modes and bands nowadays, I tend to notice it less. Also, I can't say I see or hear it on the TV or FM radios here.

Any ideas would sure be appreciated!
- Mike-AB4YY (ab4yy@juno.com)

5090. When is the F.C.C, going to get rid of the "Bathroom Man" 14.313?

Newsgroup: rec.radio.amateur.misc

Today I wanted to return the favor by sharing some great news about a new company that is finally a reality. If you do not want to receive this information or do not want to remain in this database, please send me an email and I will gladly remove your name. If you are like me and want to take advantage of any REAL opportunity, this information is for YOU.

Read the following and let me hear from you.

MANUFACTURERS DIRECT, LLC (M.D.)
~~~~~~
Your Prescription for Low Prices
~~~~~~

Manufacturers Direct (M.D.) markets Products Directly from the Manufacturer to the Consumer.

Manufacturers Direct has a $19.95 cost to join and there are NO monthly requirements to receive commissions! Manufacturers Direct will be relying on rock bottom pricing on thousands of products that you use everyday as well as never-before-released products!

Now is the time to get in on Pre-launch!!
A full scale
launch will begin in February!

Manufacturers Direct will offer products through:

* Catalog sales
* A state-of-the-art Internet Shopping Mall (under construction)

Here is the list of categories of products that M.D. will have in the very near future:

* Full line of Computers and Peripherals * Clothing Line - Men's, Women's and Children's * A Full Line of Jewelry * Electronics - Every Type of Consumer Electronic * Video Phone * Communication Products * Nutritional Products - Vitamins, Pro-Biotics, Liquid Vitamins, etc. * Auto Parts and Accessories * Crafts and Hobby Supplies from Michael's * Major Appliances - Refrigerators, Washers and Dryers, Stoves, Dishwashers, etc. * Small Appliances - Coffee Makers, Electric Can Openers, Microwaves, etc. * * Office Supplies - Everything from Paper to Copy Machines * Housewares - Dishes, Pots, Pans, Silverware, etc *

Furniture - Beds, Dressers, Couches, etc.* A Full Line of Sunglasses *
AND MANY MORE ITEMS TO COME!!
==========

You can be a Independent Marketing Representative (IMR)

Becoming a IMR costs $19.95 - period - only to cover administrative costs. NO MONTHLY COMMITMENT - the products and prices are great enough to carry the company without this gimmick. A representative receives nothing for signing up a person as a Independent Marketing Rep. or Buying Association Member (BAM) other than the commissions off of sales generated through those individuals. Catalogs will be provided FREE and mailed FREE upon signup. A representative will have to pay for additional catalogs and support materials at company cost only. Why should the company make a profit on support materials and catalogs?

In addition to residual income from representatives in your downline... you can sign up Buying Association Members on your 1st level and earn commissions from THEIR purchases!

Cost to be a BUYING Association member: An annual fee of $9.95 to cover administrative costs and getting a catalog in their hands. Members will not receive commissions, but will receive discounts and additional benefits not available to the public.

COMMISSION STRUCTURE:

Commissions will be paid only on product sales and nothing else. Any person you sponsor as an IMR or BAM will be on your first level. You have UNLIMITED width. You will receive commissions 10 (TEN) levels deep with unlimited width on each level.

Your first prospecting tool is the catalog. Place your tracking number on it and let it do the work. The catalog will have an 800 # order line and people must give your tracking number to be able to order products.

How Commissions are paid:

Commission Value (CV) is 80% of Profit on Product
(The industry standard is only 40-50%)
100% of CV is paid out

25% of CV is paid on level 1 (personal level)
20% 2
10% 3
10% 4
10% 5
5% 6
5% 7
5% 8
5% 9

5% 10

Manufacturers Direct is a product driven company, not sponsorhsip driven - unlike most new Network Marketing companies.

Highlights:

* Your own catalog business for only $19.95/year
* All products guaranteed by the manufacturer.
* Excellent prices on products you want and need
* Products delivered directly to you door
* No inventory requirements
* No monthly purchase requirements
* Earn commission on 10 levels of Reps (IMRs) and Members (BAMs)

SHARING THE SAVINGS WITH OTHERS EARNS YOU INCOME
EVERY TIME THEY SHOP!!

M.D. 12-18-96
~~~~~~

Sign up NOW!!!

Just hit REPLYand TYPE: MD Application in the Subject field and I will send you an application.

Once you have faxed your application in, you too can start referring your new clients or just signing up new members under you. Come on let's build a great company NOW!

Bernard Whack

> Well, I disagree. Ham gear in real dollars is far cheaper than it was
> when I was a kid.

Always did love the , when I was younger stories..BUT, we live in the today and the now, so quite frankly, the 1968 benchmark for 1990 dollars means little if anything.

> These
> no-code techs seem to have the dough for $500 HTs and mobile VHF rigs.
> These are more expensive than say, a used Kenwood 940, which is wildly
> better than what I used as a teenager.

Hey Roger!!!! ANY Kenwood 940's you find for less than 7-800 dollars, let me now. I can make a fortune reselling them for 1000 bucks or more. Or are you referring to the fact that a Kenwood 940 sells for less than todays HT and mobile rigs in terms of 1960's dollars???

BTW, equating the CW requirement with retirees was one of the most asinine statements I've ever read. If you use that logic in court, I pity your client(s).

Hello Simon,

I was interested in your message, as not long ago at the Derby Radio Society we had a couple of talks by people who used to monitor Japanese transmissions during the War. They gave us a very good demonstration of Japanese morse. I regret that one of them has since died, but the other chap, Harry Sills, (G8QZ) is still around. I wonder if your father would be interested in contacting him? If so, let me know via e-mail and I will pass on the details.

When I spoke of data modes and 9600 being the highest available I was
talking of the entire spectrum. Speeds are limited on HF, I know.
Still it doesn't stop the U.S. Military(and otrhers) from using faster
speeds on HF.
The Pro-coders are afraid that if reliable datacomms of highspeed were
allowed their precious CW might no longer be required as their only
legitimate claim is it's use in extreme emergencies would no longer be
valid.

Well once I get over the overwhelming encouragement to new hams you
exude...

You cry about newhams not knowing squat about electronics. So, lets
make the written test tougher. Eliminate CW requirement and improve
REAL WORLD skills with a strigent written test.
Then you can stop whinning.

5109. Re: The CW Requirement Favors Retirees

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-29 00:00:00 UTC
From: kd1hz@anomaly.ideamation.com

Source record: 208666

In article <32C647A3.751@ibm.net>,
Roger J. Buffington, W6VZV <rogerjb@ibm.net> starts off saying:

>Well, I disagree. Ham gear in real dollars is far cheaper than it was
>when I was a kid. The thousand dollar prices you reference are
>completely bogus because that is the price for new stuff. Sure, younger
>hams usually get used gear. And used gear is very cheap, just listen on
>the swapnets.

And then manages to deduce:

>It is Morse Code that deters new hams, not the price of ham gear. These
>no-code techs seem to have the dough for $500 HTs and mobile VHF rigs.

This entire paragraph doesn't follow if you accept the first paragraph
as being true.

Used HTs and mobile VHF rigs do not cost $500. More like $100 to $200.
So, I would change your second sentence in the above paragraph to read
"These no-code techs seem to have the dough for $200 HTs and mobile VHF
rigs."

Naturally, though, there is no evidence to support that no-code techs
buy more used gear than new gear, so the entire logic train is
pointless anyway.

This is so true.. But the facts are there. The average everyday ham
that whines about keeping CW requirement could care less about the
future of the hobby. All they really care about is keeping the bands
less crowded so they can contest and DX without any real competrition.

I tend to agree with you, however, I was once hired by a company and the first two weeks of employement was strictly to gain product knowledge. I was forced to watch video tapes about the products as well as demonstrate pratical knowledge that I was taught. Just imagin, when hired about 10 years ago, I was making a whopping $5.50 per hour.

So my point? The pay has nothing to do with it, it is the company's dedication to its' customer's by having trained it's employees to a minimum level of pratical education about the product's that it produces and/or sales.

And to go hand in hand with the my statement above, remember this:

"Radio Shack, you've got questions. We've got answers"

I guess 'uuuh' over and over is a valid answer for a question!

Ray.

I never said VHF is better than HF. I said it is more difficult to DX on VHF than on HF and therefore those who choose to do so are accepting a challenge. Since so many people acuse no-coders of being lazy the statement is appropriate that VHF is a real challenge as opposed to HF.
Why do I want HF. The same reason everyone does. For easy International contacts. To talk with others in different cultures on a regular basis with a wire and a decent radio as opposed to the mega array and mega buck radio required to do so on VHF.

Eric

Hello.
I've just updated my FTV program, which does FAX & SSTV using a SoundCard, to decode Baudot using the same (FM) demodulation engine.

Here is a run down of the more interesting features:

(1) It keeps the demodulated signal in memory, so that the signal can be analysed again at a different keying rate or polarity! Garbage can be resampled on the fly, which means that minutes of received signals decoded at the wrong baud rate or keying polarity are recovered, on the fly, while still receiving.

(2) Keying rate and polarity are analysed automatically - standard baud rates are automatically set following analysis.

(3) Tuning oscilloscope available at all times, without loss of copy.

(4) Program works in real time.

(5) I wrote it, and I love it - I myself can't believe it works so well!

Download your copy of FTV from my web site, at:
http://www.geocities.com/SiliconValley/2504

System requirements, and the standard features of FTV are described in the following page:
http://www.geocities.com/SiliconValley/2504/ftv.htm

By the way, AM signals from low orbiting weather satellites are also decoded - no extra interfaces needed. Demodulation mode is user selectable in software.

Hope you all have a load of fun receiving 'words and pictures' - I hope to get some feedback !

Happy New Year 1997
All the best from Brian, 9H1JS, on the Island of Malta.

I think that the above code is a lot more important for newcomers, and
experienced hams alike, to understand, than is the Morse code.

Golly Steve, your silvery rhetoric and rapier-like logic simply bowl me over.

I'll refer you to the amateur's code, which states that "the amateur is friendly." I don't think you are observing this tenet. Or have you concluded that the Morse Code is more important than the Amateur's Code?

I've noticed this about some members of this newsgroup: they quickly switch from attacks on others' ideas to attacks on the individuals themselves. Like you are doing Steve. Pretty second class conduct, in my book.

Mine too. I could do 35WPM back when I did CW daily, and can still do
20 WPM any time at all.

Unfortunately, newcomers to our hobby have not yet experienced the
thrill of HF in many cases. Particularly in the internet age, they see
two alternatives: one requiring a seemingly pointless Morse Code test,
and one that doesn't. Too often (for the health of ham radio) ham radio
is the loser.

Our hobby is greying, our numbers are declining. Are we just going to
stand around and watch our hobby continue to die? Because that's what
is happening. If I didn't think so, I'd be **for** a CW requirement, as
an additional disincentive to CB types (meaning no offense to anyone in
particular).

Hi Walt. I have linked or listed all of the HF nets I can find info on.
Go to the DX Reference page below & click on "On The Bands" then "HF
Nets".

If u find others -- please forward and I will include them.

Good Luck

Does anyone know of an old Group called "FOX TANGO"?

-OR-

Does any one know of a Newsletter or have old newsletters on the FT-101?

Perhaps they have been reprinted or there is a Home Page which gets into this.

Thank you,

Roman, N2KFL

: poll? I'm an ARRL member, and I don't even remember receiving it. The
: point is that the 6% who DID respond cannot be assumed as representing a
: random slice of the League's membership, let alone all hams, or all
: Americans.

I don't disagree that it was a self-selected poll. It would have been more fair (not to mention more interesting to see the result) if ARRL had sent one to each licensed amateur; although that would have more than quadrupled the cost. Of course, then the League would have been criticized for sending it to all the SKs that are still in the FCC database.

I suppose even a random sample of the public would have been appropriate also, but you'd have to find enough people who had some idea of what ham radio is about, to get an intelligent opinion from the public.

It would be quite interesting to see how that sampling technique altered the result.

Mike;
More than likely the problem is caused by electrical lines. Arcing can
occur in transformers, insulators and "butt" connectors that are used in
conjunction with electrical service.
I have also, just reciently solved a interference problem caused by a
television antenna distribution amplifier. It was causing a signal with a 60
cycle hum to be heard intermittently on a "low band" (47mhz) frequency used
locally by the American Red Cross. The distance was roughly 4 miles!
Hope you get your problem resolved!

I take mine as well, whenever I travel. Even in large metropolitan areas, mostly I hear silence on the repeaters. When there is someone on, it has been a pleasure to monitor the conversation.

I've noticed minimal problems in this area. We do have some repeater-to-repeater interference; some intentional and most, not. We have a couple of battles over coordination, and one well-publicized case involving repeater ownership. For a short time, we had some guy who liked to come up on the club's 2m repeater and belch. Heard him on the highway emergency repeater once, as well. But, at least the others on these repeaters had the sense to ignore him, and he disappeared.

Some of you, no doubt, would rejoice in the end of cw. However, as a concerned ham who will be trying for his upgrade soon, I wonder if we should do away with it. Sure, it is not easy to learn (and neither is german, french or chinese). The point is, if we lose the capability to use computers and have to fall back to older style equipment because of an emp, morse code could be the saving grave (in case you are wondering, I am a firm believer that a terrorist group might use a high altitude nuclear detonation to bring this, or any other, country to its knees).

We should keep in mind this: we should never forget what we already know, because we never know how useful it can be in a pinch. This is one of the reasons why some many people keep those old "radio Amateur handbooks". Lots of useful stuff can be found just for the looking and I consider cw mode to be one of those useful items that we should discard.

The training that you received 10 years ago was probably exceptional, although your initial hourly rate indicates that it wasn't a minimum-wage job at that time.

Today, I'd say that such training is unheard of in retail sales. Customers have to know exactly what they want before buying, because most sales people have enough problem simply operating the cash register. Radio Shack employees are typical among this population.

O I C, it's OK for you to attack an entire generation of amateur
operators, but if I voice my opposition..tsk tsk

good rebuttal.

Quite frankly, as stated, I have absolutely no opinion as to
procode/nocode. Only those who want something for nothing. Or prefer
not to work to achieve. Kinda like getting a law degree from a matchbook
cover. Accomplishes the same thing I guess.

>
> I've noticed this about some members of this newsgroup: they quickly

> my book.

So I guess it's OK to attack the OT's?? I don't consider being able to
retire and sit back and enjoy it in the same catagory as their support of
the code requirement. I stnad by my original post. To even equate the
two is asinine. 2nd class?? your opinion..great. That and 80 cents gets
me coffee. I still maintain that your type of logic is illsuited for the
legal system, unless of course you're Ron Kuby, and last time I looked,
you weren't.

You OWE all you insulted with your spock like logic an apology. It was
to say the least, very insulting to the retired amateurs of the world, it
to say the most, a very typical post taken from the BOOK of CARL. If yo
can't win on points, switch to the shotgun approach of insults. Sooner
or later, you bound to get something correct or worthwhile said

OK so be it. BTW, find any of those cheap Kenwood 940's?? I've lined up
at least 14 buyers, so let me know. I can't tell you how much excitment
you've generated by that post. Forget everything else, that one part was
worth the price of admission.

I've left in your original post. Help me out here. Where did you
specifically mention HF?? OHHH qualifiers are now in place. I C said
the blind man as he took out his hammer and saw. Make a statement, get
hammered than say.."I didn't mean to say that, I meant to say this??"
Sorry, like a dodo bird...doesn't fly.

If you knew that speeds were limited on HF (as it is HF that will
affected by the removal of the code requirement), why ever mention it in
the first place, other than to troll for flames.

The 2nd statement..loved it..the military and others. A big SO WHAT.
We are not the military, they can do things we've can only dream and as
pointed out, the other must mean commercial communications interests.
HMMMM CARL'S AGENDA, the commercialization of the ARS..play for pay. As
pointed out, to allow some of the previously mentioned datamodes would
require the change from Amateur to Professional radio service.

We are the AMATEUR RADIO SERVICE. we are not the military, we are not
AT&T, MicroSoft, etc etc. Remember it, learn it, love it

There no doubt is a long answer to your question, but the short one is, you aren't. First you have the question of commercial activity on an amateur band, but if that doesn't stop you, the baud rate possible on those frequencies isn't going to be fast enough to keep you happy on the internet. Might check into the power limitations and frequencies for the general mobile radio service.

You need to think before posting if you don't want to be considered
flame bait.

What you hear represents a cross-section of hams in general. Ham radio
is less vital and less interesting than it was way back when. There are
simply fewer newcomers as a result.

The idea that "working people" have no time to master CW is simply a
cop-out. I am a working person and I can't begin to tell you the
additional talent in various areas that I've developed by applying
myself. Some of this outside work was a lot more difficult than learning
CW. Some people are just plain lazy. And I make that comment as someone
who does not necessarily support the code requirement.

The other major flaw in your ridiculous "analysis" is that your argument
hinges on the notion that these "retirees" have had time to learn CW
because they are NOT "working people" (and thus too busy to learn
anything new). This is the silliest premise. These retirees, for the
most part, entered the hobby early in life in their teens or *perhaps*
their twenties, pretty much like newcomers today. Just ask them!

Maybe these retirees were less lazy and more motivated than *some* of
today's "working people".

Let's not forget dB paint. A better gain improvement device never existed.

Just remember to stroke up to increase gain, stroking down decreases gain.

OK. Well, as I said before, try 160 meters. But you are still telling me that working DEEEX on VHF is doing it 'the hard way'. Which is contrary to the popular idea that it's time hams stopped doing things the 'hard way' (CW) and get with the more modern technologies. Why don't you want to modernize and start doing things 'the easy way' ? You did say 'HF is for sissies' didn't you ? Does that imply you think you are a sissy ? Talk to a few of the people on the top of the DXCC honor role and ask them how unchallenging HF is.

>Why do I want HF. The same reason everyone does. For easy
>International contacts. To talk with others in different cultures on a
>regular basis with a wire and a decent radio as opposed to the mega
>array and mega buck radio required to do so on VHF.

Now you want to do things the 'easy' way. Use email. You can talk to anybody in the world with little or no effort via email. I worked 2 stations on 160 meters in Europe over the weekend, but I got email from 50 other stations in Europe. Much easier. You obviously haven't seen too many HF ham stations. In 2001 you may be able to make international contacts on SSB with your wire in the tree, so there's no hurry to rush the no code HF thing thru, you still have a few years to wait. See your amateur radio handbook under 'sunspot cycle'.

One of the reasons why code is still should, in my opinion, be kept is that it is a learning tool for beginning amateurs. Many of the longer time amateur got their basic training in cw. cw allows you to make your early mistakes one-on-one rather than on a voice repeater for everyone to listen to.
Larry

If this is so why don't the no-coders take the folks in Washington to
task over the matter. The Legions of Lenny and the Cadres of Carl
should overrun DC in no time. A day of atonement for amateur radio, a
second million man march, all that natonal press....

Nope, too much un-necessary effort involved. It is much easier to go
"wah" over the current state than make a concerted effort to produce
change. Too quote an a musical 'olde phart', "I don't need your
wah-wah."

Lead, follow or whine on the usenet....

So you live closer to Washington where the CW requirement can be changed without any problems for WRC-99, then do it! If 10k more no-coders were members of the ARRL and voted that way in the ARRL's survey....

All the bitching and whining possible will not accelerate the possibility of a no-code HF ticket. 18x72 happened long before the end of the Vietnam "conflict". 18x72 was not as visible but better organized and that goal became a reality. No buildings were taken over and no innocents lost ther lives, 18x72 worked within the system and succeeded. It seems the no-coders are even unwilling to put forth any effort in that direction.

I am in favor of some sort of no-code HF ticket but if I vote di-dah-dit will it count?

The code requirement is not a moral issue even though some no-code proponents assume that it is the HF sacrement. Gerald Schmitt is a no-code proponent who had a lot harder time getting to 13 wpm than most other hams passed the same CW requirement. He put forth the effort, more effort than I have ever heard of for someone pass 13 wpm and he could have obtained a waiver. He decided he could do it and he did!

Although Mr Schmitt does not want anyone else to endure what he had to go through to get his ticket, he was willing to do what others are say they cannot do and are unwilling to make any attempt.

Jim,

Ignoring all the complaints about test questions, enforcement, etc.,
etc.,
I have a fundamental problem with the idea in that it seems (to me)
to be counter to the spirit of innovation and experimentation which
is at the root of the amateur service.

If I must be "endorsed" for every new thing I try, then no new things
will ever see the light of day, because the *endorsement* does not
exist for something that has never been tried.

Just my personal opinion, and your mileage may vary.

Excellent Idea!.. how about as a reward, we allow only hams with a CW
certificate to use the bands below 30mhz. I think the problem is solved
now, those with a certificate get the privileges, and those who don't
...
don't get the privileges...but they **are** still allowed to whine.

Tom in Seattle here.

I'm looking for a mint ICOM IC-2330A. Would like to take it on a long
bike ride
and of course keep it as a pet for home too. ;-)

Actually , Bill didn't write that part. he only observer what autism
meant... and he is correct... I said what I meant. It IS an inability to
learn, although you are correct in a sense too, I have known (do know)
a couple of Hams to whom autism might apply, and they could learn
morse..
actually easier than I did.
I have never (until now) believed in "can't" but some of these whiners
are starting to make be believe there really is some sort of disability.

Well, I meant to imply what I have seen on the TV news (not a reliable
source, I admit) but I was under the impression that autism is a type of
learning disability where in some of the symptoms are :
seeing letters reversed, or writing them that way, have some areas
completely 'blocked' out while in othere areas there may appear to be no
disability and/or even a superiority, similar to 'idiots savant'
guess I gotta go back and re-read what I thought I read.. Oh well, been
wrong before.

What I mean't by that was that they are in and of their own governing body. They don't have to answer to courts unless the regulations violate the constitution, and they don't have to go through the courts to levy fines. While the regulations hold the weight of law, the FCC only has to answer to themsleves when it comes to enforcement. The regs. aren't laws in the traditional sense of a law that goes through a legislature

From: windbrkr@fred.net
Message-ID: <MPG.d323b75322ac26f9896b2@news.fred.net>
Source record: 208387

Roger,

One key thing to remember is that today, most of hams of an age to be considered "retired" probably got their start back when ham radio and life in general were a bit different than they are today.

Back then, if memory serves, the policy was "up or out", with Novice licensees given a year to get some air time under their belt in low-power (<75W), crystal-controlled CW only, and then either moving up or moving on. Anyone surviving that year could avail themselves of the privilege of presenting their log books to the local FCC office, and taking the tests for either Tech or General. Tech didn't involve any additional Morse expertise, but didn't buy much in the way of increased HF privileges, either. I would guess that anyone having earned his/her stripes during a year as a Novice, and wanting to continue in the hobby, would go for General, and was probably pretty much ready for the 13wpm code requirement. Remember, too, that back then, the FCC could and did require that ham license candidates demonstrate Morse sending proficiency as well as the ability to copy at the required speed.

So I would guess that relatively few of these retirees are late converts to the virtues of HF and CW. Most of them probably paid their amateur radio dues back in their high school days, when life was simpler, and are now just kicking back and enjoying the pleasures they may not have had much time for when they were in college or raising families. They've probably got more time and money to spare than they did back when, and the attraction of networking with other like-minded and similarly situated hams can't be denied, in today's often fractured and contentious society. Probably no different than meeting in the park and passing the time of day, except that one is less likely to get mugged in CW (or any other mode) on HF.

I would say that ham radio just isn't attracting the same numbers of the same "type" of person, at the same early age as it did back when today's retiree hams were getting started. There's probably too little awareness of the hobby overall, and far more in the way of other distractions and planned/mandated activities, for most kids to even notice ham radio as an alternative.

I'm not sure what the antidote to the reported "graying" of ham radio is (Grecian Formula probably won't do much good if it's as bad as everyone says...) But in any case, it strikes me as highly unlikely that the problem is as simple as fingering a bunch of "retirees" as the culprits, unwitting or otherwise, who are keeping all the rest of us "busy working people" from full participation in the hobby.

Cheers,

Bob K9CMR

Would that be HF packet with its rather limited transmission rate. But a question....if emp damaged all the transceivers, wouldn't it also damage the equipment to diagnose and repair the emp damaged equipment??

Maybe Carl or Len could open a little shop in Mayberry, NC, kinda like Emmett's Fix-It Shop. Maybe Aunt Bea could fix up some fried chicken and finger sandwiches will everyone dies from radiation poisoning. Maybe Goober could pump the gas needed to burn the unburied multitudes of deceased.

But hey, pass that traffic.

Lighten up everyone! there's something for everyone in amateur radio. If you don't like a mode don't use it!
if you like a mode use it! if you want more earn it. if you are happy with FM, stick with it. If you're happy with CW, stick with it! either way, a licensed user is a member of our family of radio operators and should be treated as such.

the two year period was recommended to the fcc by n4rx, who saw
a potential problem with 'trafficing' in callsigns... the fcc
agreed with n4rx, and put the 2 year rule in when the final
regs on vanity callsigns were issued...

Fellow Amateurs: Please read the first two paragraphs!

CLAWSON@TELEGRAFIX.COM (PAT CLAWSON) said to ALL in comp.bbs.misc:

Boardwatch may have abandoned the BBS sysop, but TeleGrafix is still standing strong with them. However, we think that BBS systems must become Internet-connected if they are to survive in a Webbed world.

First, we need to quit calling these online systems by the moniker "BBS." The term has come to reflect something on the order of ham radio -- low-rent communications run by amateurs. That may accurately reflect some BBS systems, but we've found that many sysops run very professional online businesses.

Second, we need to start emphasizing the Power of Telnet and talk about Telnet Sites, not BBS systems. A telnettable BBS or legacy system can do many things the Web can't. Most of the computer industry and public has been Web-washed (brainwashed) by all the press hype. They think the Web is all there is to the Internet/online experience. Just a couple of days ago, I was talking to the Internet reporter for one of America's most prestigious newspapers. He had never even heard of Telnet, didn't have a clue what it was -- and his news reports influence literally millions of Americans. BBS sysops and BBS system manufacturers need to refocus their efforts, and begin producing tools and content that take advantage of the Power of Telnet.

Third, Telnet Site operators (such as BBS sysops) must professionalize the look and feel of their systems. Most sysops make little investment in quality graphics for their systems. In a glitzy Web world, it is little wonder that the public is turned off by ANSI BBS systems no matter how if the content on them is of high quality. We constantly hear BBS sysops complain about having to pay what are very modest sums of money for RIPscrip graphics -- but the people running Web sites don't think twice about investing thousands of dollars for a fabulous look.

Despite all the flack we take from BBS sysops, we continue to support their efforts -- and we always will. But BBS sysops have to change with the times, and they have to be willing to invest to upgrade their systems to compete with (or complement) the Web.

On Christmas, TeleGrafix released the first multimedia Telnet browsers. RIPtel Visual Telnet is available now from our Web site at www.telegrafix.com. This is a huge step forward for the Internet, and it represents a salvation for BBS sysops by placing Telnet graphically on a higher level than the Web.

The serious professional operators will get on board the Visual Telnet train, and they will live to see a brighter day.

Understand the "lapse" delay.

I think part of the issue in this thread has to do with 1x2's and 2x1's which are surrendered by someone getting a new vanity call (in some cases, clubs have gotten 1x3's and surrendered 1x2's).

In these cases there is no renewal issue....but apparently the two year holding period still applies. That does seem a waste .. especially when no one (except the FCC and they aren't telling) knows which calls are available (e.g., the QRZ vanity availability list) and which one have not done their two year stint.

Friend of mine missed out because the last unissued call in his list will not be available until Aug 1997 (FCC did tell him that AFTER he rolled the dice).

Phil

Yes, thats what I said. I'll say it again. Most extras I know memorized the answers to the theory tests. The implication was that if it's OK for extras to memorize the questions/answers, it should be OK for techs too.
Far as I'm concerned, nothing wrong with memorizing answers to the written tests. You do what you have to do to pass. Too bad some people can't apply that principle to the code tests.

>
> In this case, the general non-ham public must be included because the
> radio spectrum is a public resource.

No, remember the people taking the poll were not trying to discover what the general public thought in order to support the "best policy". The ARRL, since its mission includes representation of amateur interests, was trying to figure out what *amateurs* wanted. Polling both member and non-member amateurs is of interest, since it might reveal that current members have different opinions than non-members, and perhaps by adjusting its positions the ARRL could convince current non-members that the League does represent them as well.

I'd love to see a well constructed and executed opinion poll of the general public on this issue, but such a thing would be terribly expensive. I'm sure not going to pay for it, and I can't see asking the ARRL to spend membership money to do it either.

> [not] as important as previously thought!

Look, I know it seems easier to win arguments when you make up both sides, but it really isn't helpful. The argument generally isn't that "if I don't think a section is important leave it off my test," it's that "if the section is no longer important replace it -- for everyone -- with something that is". And the Oakland school board didn't decide that standard English wasn't important, they decided that recognizing "Ebonics" would make it easier for certain kids to learn standard English. (I don't happen to agree with the Oakland school board, but at least I bothered to find out what it was they said.)

Unfortunately, your logic is based on a misunderstanding of government's burden of proof. You are plain wrong that "compelling interest" is the standard. It most certainly is not. The standard in this context is "rational basis," a far lower standard. Government has only lost 1 case challenged under rational basis in all history. Pretty slim odds.

You can see why. Anyone can disagree with the government's position on lots of things. It is not the courts' role to second guess every governmental agency or Congressional decision. Nor do they. Hence the incredibly deferential "rational basis" standard.

>And that 83% gets privileges unrelated to Morse for passing Morse
>tests. Clearly, Morse tests hold a disproportionate position in
>amateur licensing.

It's all how you look at it. I hold an extra class license. I passed
the 5, 13, and 20 wpm tests. I only needed a total of 1 minute copy
at each speed. That's three minutes. If I needed all five minutes to
pass each test, thats fifteen minutes. I spent at least two hours
taking all of the amateur exams. I see the morse tests as being only
12.5% of the exam. What does this mean? It means that 83% is really not
a meaningful percentage.

Code is not dead yet, it's just coughing up blood.

>to wait. See your amateur radio handbook under 'sunspot cycle'.

>73, Jim KH2D

Well last year I made a fine contact with a lady in Australia on 11m.
All I used was a dipole and about 10watts SSB. Truly the bottom of the
sunspot cycle. Explain that to me. Explain to me why a friend of mine
who is beeping away in the next room made contact and QSL'd the same

lady two months later with the same radio and same antenna same power at a different QTH
I could go on with dozens of other similar QSO's like the one with Vienna or the guy down in Panama I used to talk to every morning on my way into work but I hate to be a braggard.
Problem with HF is that ya always here wise old hams say "The band is dead" when they really should be saying"I am too lazy to spin the dial and listen for more than five minutes"
And yes i would like to have HF in my arsenal. That does not make me an HF sissie. An HF sissie is like the wise old ham described above in my last paragraph.

I see it as a compromise that would satisfy both sides of the code debate. No one is saying that such an endorsement would be the answer to everything, but at least it's a start.

>Also, who's going to police the CW subbands to make sure someone
>without an endorsement isn't operating CW?

How are they policed now? Who polices the bottom 25 khz. of the 75, 40, 20, and 15 meter bands to make sure there are only extra class licensees operating there?

>Ironically, today's band allocations contain only two totally
>exclusive CW subbands. They are on 6m and 2m and any non-coded
>tech is free to use them at whatever speed that person wishes.

As I said, the proposal doesn't have all of the answers, but it's a start.

>technology in order to receive a radio station license? I don't think so.

From what I see, your arguments are just opinions, and have no legal basis. That's not going to be enough. The FCCs requirments are regulations, not law. Besides, there are ITU treaty obligations that the government has to obide by. This means knowledge of morse code as one of the requirements needed before the issuance of a ham radio license. Treaties take precedence, and so any lawsuit would be thrown out based on this.

Funny. Around here we just find them with a simple DF antenna and
politely ask them to stop. Usually works.

>n8blk/3 -art clemons-

Lots of good advice here, but may I add one thing? Be sure to fuse both the positive and negative wires to your rig. There is a rare possibility of an open ground developing between the battery and the starter motor, and when that happens, the starter motor will try to draw power through your rig via the coax to the antenna, IF the antenna is grounded. If the antenna is an un-grounded type (and you're sure of this), then there is no problem. I've seen pictures of rigs where 200-300 amps flowed through them and it ain't pretty.

Unless things have drastically changed since I moved from the Syracuse area, there are a number of active 2 meter repeaters. See the Liverpool Amateur Repeater Club home page at <http://members.aol.com/larcclub/larc.html> LARC operates two 2 meter repeaters on 146.31/146.91 and 147.81/147.21 as well as 220 and 440 repeaters.

> >Ever since "incentive" licensing
> >came into effect ham radio in the USA has been divided in this way.
> >Do away with the tests and we'll do away with a lot of division.
>
>There was a time, not too long ago when hard work got you a reward,
>harder work got you a bigger reward, and even harder work got you still
>a bigger reward. What is so damned bad about that concept?

What is wrong is that it hasn't been true since the birth of the industrial revolution. The person who gains the biggest reward is the person who works *smart*, IE who is most productive. A ditch digger works *hard*, but the fellow on the backhoe moves more dirt in a day than the fellow sweating over the shovel can move in a week. And guess what? The fellow who works smart gets paid more than the fellow who merely works hard.

The belief that hard work (*any* hard work whether it is relevant to a particular task or not) should be rewarded, is a hair shirt Old Testament religionist argument. It is saying that one must suffer torments, like Job, in order to gain recognition and favorable treatment by higher powers.

>You are advocating SOMETHING FOR NOTHING and I don't buy it!

The spectrum is the common heritage of mankind. It belongs to each and every one of us as an inheritance. None of us created it, so we don't have special claims to it by reason of works. Rather, we have a claim to it as a part of our common heritage, just as we lay claim to the air we breathe or the rain which falls on our heads. In a real sense, it *is* something for which we have to pay nothing, because we already own it as part of our birthright.

And as with those other things which are part of our common heritage, we band together in the form of government to regulate the use of our common property so that a few don't despoil it for the rest of us. We have anti-pollution regulations to prevent the air and water from being despoiled, and we have radio regulations to prevent the spectrum from being despoiled. As Thomas Jefferson so eloquently put it, the sole legitimate purpose of government is to restrain men from harming each other. In all other things, men should be free to pursue their own interests in their own fashion.

The purpose of licensing is to regulate usage of the spectrum so that interference is minimized among those using it. This mitigation of interference, of harm, is the sole purpose of licensing exams. The exams are supposed to assure the government that the applicant competently understands what is necessary to operate with a minimum of harm to others. Thus we have exam elements on the rules and regulations so that the applicant cannot later raise the excuse "I didn't know" for infringing them. And we have exam elements on electrical theory so that applicants cannot raise the excuse "I didn't know" when their equipment malfunctions and causes harm to others.

At one time, the ability to receive Morse Code was required so that other stations, particularly government and life safety stations, could warn off an amateur causing interference to their operations. Morse knowledge was needed because government and life safety used Morse exclusively in many cases and had no other way to interoperate with offending amateurs. That day has passed. Government and life safety stations no longer use Morse, and other services' usage of Morse is rapidly dwindling to the vanishing point. By 1999, no other radio service will require its operators to have knowledge of Morse.

Internally in the amateur service, amateurs have wide flexibility of choices of methods for interoperation. And due to historical and regulatory choices, operators are mostly segregated by mode so that there is little need for intermodal interaction as an interference mitigation tool. So there is no longer a legitimate purpose for the Morse receiving speed requirements. They now serve as an arbitrary and illegitimate prior restraint on our access to our own common property, our birthright, the spectrum.

The divine right of kings idea that our common heritage belongs to the king, who may grant a boon, IE a privilege, to his favored subjects to use it from time to time, or not, arbitrarily at his whim, has been dead since the signing of the Magna Carta. Government is the servant we permit to manage *our* common property for us, in *our* interests. When it starts to act as master, either by arbitrarily limiting our access to our birthright, or attempting to sell exclusive use of our birthright to a few, it oversteps its legitimate bounds and needs to be reminded of its place.

In some nations, that reminder may require revolution, but in the US we have a number of other avenues we can pursue. Primary among them is the freedom to speak out against such abuses of power. We may do so on a street corner, here in the open electronic forums, or in more formal ways. In most cases, to prevail we must not only be right, we must be perceived to be right. Thus campaigns of public education and persuasion are vital first steps in any significant movement for change.

Unfortunately, sometimes we must speak loudly in order to be noticed. That sometimes puts off those who are timid and fearful of change. And

those who feel that their ox is being gored will naturally squeal. So the debate can take on the appearance of a brawl at times. But as the old saying goes, you can't make an omlet without breaking some eggs. Morse has been a sacred cow for a long time, but continuing to require worship of the cow is no longer an option which will be permitted to stand. (Note that doesn't imply that people will be forbidden from worshiping the cow as a matter of personal choice. As Jefferson said, in all other things save impositions on others, men should be free to pursue their own interests in their own ways.)

>AGAIN!!! Who has proposed that? Not me, not Carl, Not
>Len, not Gary, etc.

Actually, I have expressed a preference for a single
license class, and its examination would not include
a Morse receiving test. I have been persuaded, however,
that there also needs to be an entry level class. I've
suggested that class be limited in output power to a
rather low level so that they can't do much harm while
learning their craft.

I believe that the entire idea of "Incentive" Licensing
is fatally flawed in that the added requirements for
higher class licenses don't correspond with the added
privileges granted. For example, there is no less potential
for harm from a General operating on 14.275 MHz than there
is from an Extra operating on 14.180 MHz, yet they have to
pass different tests to do basically the same things on
basically identical spectrum. Either an Extra's qualifications
are required to operate 20m or they are not. There is no
legitimacy to disparate tests for similar spectrum access.

gary@ke4zv.atl.ga.us (Gary Coffman) shared these priceless pearls of
wisdom:

->Ideally, what I would like to see is a single amateur license
->class with question areas stressing electrical safety, technical
->compliance, and operating practices.

->Power level, rather than subbands or mode restrictions, would seem
->to be the logical differentiator

I might suggest that any such homebrewing should be limited
->to using no more than a 12 volt DC power source, however, just in
->order to reduce the chance the apprentice might harm himself
->while experimenting with circuits.

It'll never fly, Coffman. It makes too damned much sense for our leaders
to understand.

>>listening to them ?

>>73, Jim KH2D

>Well actually listening to a QSO you tend to learn alot. Like if you
>were to read an entire post from time to time....

I missed the word 'listening' in your post. Or is this another case of 'I see' said the blind man, then he got out his hammer and saw. You got hammered..... never mind. You've seen this already. I hope.

Now in this post, you said you 'learn alot' by listening. I assume you are listening to Rogers retirees, cuz you said BINGO. So I guess I can assume those retirees aren't so bad after all, if you are learning something by listening. Think about this for a minute. Pass the code test. You could probably learn a lot MORE from talking to them.

But then again, if you take your own advice, and read the WHOLE post, including the subject, 'CW FAVORS RETIREES', then I would assume that Rogers retirees are on CW. And you couldn't learn much if they were on CW, because you can't understand what they are talking about. If they are on SSB, then the subject should be 'SSB FAVORS RETIREES'. Or whatever. I'll fix it. I'll change the subject.

>into one group since they have all the same posts anyway. Recommend
>calling it rec.radio.amateur.QRM
>
>Chuck W7LDS

Well you know there used to be only one ham-radio newsgroup. Then
someone got the bright idea of segregating it into neat little pigeonhole
compartments and we got the current proliferation of groups, most all
of which wind up with inappropriate topics, crossposted topics, and worse,
repeats of the same posts to each group. It was a lot simpler when there
was only one group and you could easily use your own tools to thread it
the way you wanted to read it. Ham radio has been treated much the same
way, segregated by mode, by license class, etc. Society in general found
segregation a bad idea way back in the 1950s, but amateur radio does
tend to be the last bastion of obsolete ideas.

>
>
> - Mike-AB4YY (ab4yy@juno.com)

Mike,
These problems can be a real beast sometimes...so first of all, put on
your patience cap!

A good way to help estimate where the source is coming from is to listen
for the noise and then start listening "up" in frequency. For instance,
if you hear the noise on 20m, try listening on 10m, then 6m, then 2m,
etc. The noise typically travels farther on the lower frequencies.

Driving around the neigborhood with a protable am radio, a 2 meter rig,
and an fm radio can help you pinpoint where its coming from. This is a
trial and error thing....

Using directional antennas can help you pinpoint the problem as well. I
have had good luck using a 2m yagi and my 2m rig...

Finally, when you get a good idea where its coming from (could be in
your house, down the stree, in your neighbors house (!), if its an
electrical pole, give the power company a call. Ask to talk to their
RFI, EMI specialist. I know in this area, there are 2 or 3 guys that
spend their time tracking these things down.

Be nice to these guys! They take their own time, but will help you out
if you get to know em.

Archive-name: radio/phonetic-alph/full
Posting-Frequency: six weeks

Phonetic Alphabets (Alpha Bravo etc)
December 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic/radio/
spelling/telephone alphabets, and the term analogy alphabet
is also used. This collection currently includes alphabets
for the following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Kwanyama, Ndonga, Afrikaans,
Chinese and Esperanto.

This posting supersedes the one of 15th November. Changes
include a revision of Esperanto Morse.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or additional references.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest, and where a document of this length is acceptable;
in the case of Web pages I ask that care be taken, as it is
easy to mangle something. Note that there is also a brief
version of this collection.

A copy of this article and some other material can be found
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

:>Nick N3FKS
:>Respond to Email

Hello Nick, I'll pass your number on in my e-mail reply, but for renewals or info updates, send them to WA6POZ, Gerry at:

10-10 International net, Inc
643 N. 98th Street #142
Omaha,NE 68114-2332

For DX stations, send to:

Carol Hugentober K8DHK
4441 Andreas AVE
Cincinnati, OH. 45211-2622

The cost for 10-10 membership is $10 USA & $13 for DX stations. But you don't have to renew just to update address or callsign changes. It would be nice for those that have 10-10 numbers and recently received a new vanity call to pass their new call and info on to Gerry so he can keep the database updated. Gerry maintains the roster for Ten-Ten and also puts out a program called XXIP that will display info on a number or callsign when entered. A post card or QSL with the new call and any address change would be fine.

Ten-Ten International also has a Web site with tons of info about renewals, new membership, activities and awards.

The URL is http://www.lehigh.edu/lists/tenten-l/

I try and maintain a list of active 10 meter beacons for the Web site. The 10 meter band hasn't been very hot but there are sporadic E openings along with some back-scatter and occasional rare F layer skip. I managed to work a few African stations with a 10-10 numbers when the east-west skip came around. Even worked a VK9 with a 10-10#. I have heard the VP8 beacon in Antarctica on many occasions lately but not too many stations on form the area right now.

My main interest is the 10-10 DX award along with the Bar and VP awards plus I like to work the contests when the band permits. If there is anything else that you would like to know and can't find it at the Web site, let me know and I'll get back to you if I can fill

in.

Nick; lost your origional post and address, sorry.
In my data base, N3FKS was assigned 10X# 52361.
Enjoy. 10 is not dead (well, not for more than
a few months at a time :) Get on so I can work you.

: It is my belief that it was a mistake to have a 2 year waiting period to
: re-assign callsigns. It should have been one year. The two year rule
: puts too many callsigns out commission.

I agree. Also, for those amateurs who give up their callsigns for a vanity callsign, those callsigns should be immediately available. Not that I'd want one, but there were a lot of 2x1s that were "traded-in" for different formats.

Did the FCC think there might be some "buyer's remorse" among the vanity applicants, or is this two-year rule just in keeping with their normal practice?

I hear you, pal. I've got a 3 year old daughter and plans for more.
Keeps me jumping.

Ah, but we need to get more young people into the hobby. Otherwise our
hobby will grey and die, as I fear it is already doing.

Please no one think that I have it in for retirees. As I've said, these
guys are my buddies, and I hope to someday be one myself. However, I no
more favor a setup that favors retirees than I would favor one that
systematically excluded them.

I'd be willing to bet you that the ITU requirement will be overturned at
the next conference. Other countries are already ignoring the HF below
30Mhz requirement and doing so openly. Japan, for instance.

>Occupation: RADIO BROADCASTER @ WOTS/AM-1220 ("ALL 70s, ALL DAY")
>Personal Quote: BEFORE I GOT THIS COMPUTER, I USED TO HAVE A SOCIAL
>LIFE!

Public information, Jimmy. I put it there, just for you to find...I just didn't think it would take you this long. I began using my AOL account as my primary provider on 12/1/96 when they went to unlimited useage @ $19.95/month. Just for kicks, I figured I'd leave my signature off of my posts and see how long it took you beepers to get up the initiative to actually look at my member profile. By my calculations, it took you 29 days to do so and find out this TOP-SECRET information...or, "in cognito" as you so astutely put it. Congratulations, Jimmy...you get an 'A' for the day!

Are all the Beepers as bright and as eager as you?

---snip more stuff---

Hi Chuck,

My first reaction is that your proposal would have an effect
exactly opposite to that intended. Rather than encourage the
use of Morse, the proposal would actually RESTRICT it's use
to those specifically "endorsed".

Seems this puts a historically *experimental* service on the
slippery slope of requiring an "endorsement" for any mode, and
eventually leads to suppressing the experimental roots of the
amateur service.

Just my personal opinion, and your mileage may vary.

I think Roger is correct that many hams are older people, but is that
necessarily bad? No, it just means that retired people FINALLY have a
chance to concentrate on something fun after working hard for years on end.
BTW, the last 5 CW contacts I made at random were with people from 13 to
57 years old. Thats not a valid statistical sample of course, but it does
point out that many of us DO find the time for the hobby.

I seriously doubt that you will ever see the CW test challanged in a
court of law, only because few hams have the $$$ to post such a
challange. The cost of such litigation runs into the 10's of thousands
of dollars for the person filing the case.

Its not important enough to get any civil rights group to back it. It
will never grab the headlines that groups like ACLU thrive on nor would
it set any form of precedent.

Besides -- it was attempted a decade ago by a Md ham and he was turned
away by every legal action group he approached -- and laughed at by the
majority of them.

Whether or not the no-code HF general ever happens, I don't know if it
will make much difference. A lot of hams use code, I think, just cuz
ssb-wise, ham radio bands aren't really in the right spot when sunspots
are down. 20's OK, but it shuts down early evening -- which is when I
have free time. 40 is coverered with broadcasters and at most I hear
one QSO going on around 7157 or so. That pretty much leaves 80 meters
as the only real voice band at night. And the top 100khz of that are filled with
carriers from AM broadcasters at night anyway. That leaves a pretty slim
sliver of bandwidth for all this new activity in the general 80 phone band.

Add on top of this, that really to talk SSB on 80 you want to be running
over 500 watts, I think. At least that's been my experience. So, you
have to deal with all the high power interference with neighbors..

If we got a useable phone band at 40 and 60 meters that might make SSB
ham radio more fun in the winter. But, for me, if I wanna talk SSB, I
need to run the amp on 80 meters. If I don't then it's pactor/cw on 40.

Oh, and 80m here in NO.Cal doesn't seem really that overcrowded. Except on
weekends prime time or something. There is usually someone on the band
to talk to even late.

I have no idea who "M" is, but I won't support any court action
to eliminate code testing. Additionally, as a practical matter, the
costs of any such court case are probably prohibitive since such
a case would not be one in which any damages could be involved.
That being the case, no attorney is going to pursue it just for
fun.

Gary is actually downplaying the relavence of CW testing by only
applying a 37% assessment. The reality is that it is 50%...simply
because it is a separate stand-alone, pass/fail element all by
itself. No other aspect of amateur knowledge that is tested (not
any one other mode, not any specific regulation area, not any
technical subject) has the degree of importance that CW now
holds by default since it is a pass or fail subect area.

Well, let me ask some questions: What does the endorsement mean, what
is it supposed to accomplish? The proposal seems to say that you
should NOT be allowed to operate CW in a designated HF CW band until
you have passed a minimum code operating speed test. If that's what
folks want, I could care less, but I see no value in the proposal.

Also, who's going to police the CW subbands to make sure someone
without an endorsement isn't operating CW?

Ironically, today's band allocations contain only two totally
exclusive CW subbands. They are on 6m and 2m and any non-coded
tech is free to use them at whatever speed that person wishes.

With *some* ham gear, he could be right. 2-circuit 1/4" jacks only
contact the tip and the ring of a 3-circuit plug; the sleeve isn't
connected. You'd hear the rig's audio out of only one ear. (the
right one if I remember properly)

However, most modern ham gear is actually wired with a stereo jack.
The two channels are wired in parallel. A small-value resistor
(roughly 100 ohms) is in series with each side. (if you use a
2-circuit plug, you'd short the sleeve and ring, and without the
resistors you'd also short the tip and hear nothing. With the
resistors, you're basically hooking a 100-ohm resistor across your
phones, no big deal)

Hi everyone,
I'm a blind ham, and am wondering if anyone can either tell me where to find a dos or windows program that will give me the general questions in an interactive mode? Of course, you may also send it to me via uue protocol, and that will be just fine.
Thanks,

Source record: 208500

Until I can get a mobile rig I'm temporarily using an HT with batteries on the road. There is no cigarette lighter to use for power. Here's my question - would I be better off to run power from the battery or install a lighter and use it as a power source. It's a small Toyota pick-up and putting in a lighter is no easy task. Also, if I run direct from the battery most in-line fuse holders seem to be 15 or 20 amp - any recommendations on which to use? Have a 5/8 mag-mount antenna that works great - next item is power - advisories are welcome and appreciated!

I loved my Avanti two meter, thru the glass antenna. I used it on 4 cars in succession. It withstood cold weather, banging on trees, and a a lot of abuse. There are now at least three different brands of through (I'll spell it correctly now) the glass antennas that work properly when installed properly. Unfortunately if the method used to tint your windows uses a metallic coating, the capacity coupling that is used to feed the rod won't work, because there is another plate between the two sheets of the capacitor. If you're desperate, try your FRONT window. I did that for two cars with rear window defrosting all the way up the window, and it worked quite well for me. Others though have gone crazy trying to get the things to work, using the front window, so be prepared for frustration. Every thru the glass antenna that I've gotten to work has had two tuning positions with the adjusment screw, that offered good VSWR, but only one of those two offered good reception. The last time that I tried to use it on my van, I discovered that the blue coating at the top was metallic. All I can say is that I used words that the FCC doesn't want on the air.

Incidentally, the MFJ dual band through the glass antenna works rather well usually, but it has one drawback, it only handles 50 watts of power, which means in effect that anything more than a dual band handie is likely to heat it up too much. I had one in my wife's vehicle, but overheated it with my Alinco DR 610T. I now use the mfj short magmount when I drive or ride in her car.

I also discovered incidentally that using a reflected power meter, like a bird meter in the reflecting position works better and quicker for me on tune up than a vswr meter or what I normally use, a SWR analyzer for through the glass antennas. I have no idea why, just thought I'ld point

that out.

If you have a clear window, try mounting it. Avanti sells remount kits for their antennas, but I never used one. dual sided tape, and silicon sealant around the edge worked rather well if I had to remount one. Note what you do to put the antenna on the first time, and then buy the tape and silicon sealant for the second time. Allow the sealant to dry before you attach the whip, and it will stay on for years if you apply the antenna to clean glass. I used to wash first with ammonia, then rinse, then dry with a clean cloth, then use vinegar, then rinse and dry again. None of my mounts ever came off except when I removed them with a utility knife. 73 de N8BLK/3 -art clemons-

A proper sampeling group for any poll cntains a cross section of all
members of society. Even when it is a targeted specific poll.

In this case, the general non-ham public must be included because the
radio spectrum is a public resource. As such the public must be
included so as to know what percentage of the public might be
interested in becomming radio amateurs if the code reqirement is
deleted for access to HF. Since radio spectrum is a valuable public
resource, it is the obligation of any polster taking a poll that deals
with said resource to include the public in said poll.

Case in point: When the FCC issues a Notice of Proposed Rule Making on
Amateur Radio issues, it invites "comments from the general public" --
not just from hams. And if you check the results of many NPRM's, the
non ham public does reply and many times it is the public -- not the
hams -- that decide an issue. One that comes to mind is PRB-1 -- which
would have been far stronger if the builders, planned communities, etc.
had not commented.

And if there is ever an NPRM to abolish code as a requisite requirement for amateur access to HF, I would think that numerous other services will urge their operators/licensees to comment -- as will many industries and other entities.

Absolutely correct. This is what the Beepers fear most...that the debate will begin to hinge on the fact that the radio spectrum is a public resource, and that continuing to require Morse knowledge as a condition of using those resources is no longer justified.

>be based on?

The Morse requirement will be challenged on the grounds that it is now technically irrelevant, having been replaced by more modern technology in nearly all applications...including the US Military. The legal argument will be that Morse knowledge should therefore no longer be required knowledge as a condition of obtaining a US government-issued radio license for the purposes of transmitting on publicly-owned radio frequencies.

In other words, there is no longer a compelling interest for the government to require license applicants to demonstrate proficiency in Morse code. This is the key argument that will be used..."compelling interest." Is it a function of government to require a now-outdated technology in order to receive a radio station license? I don't think so.

Very true. This is precisely the reason why it hasn't been tried so far. But it only takes one ham or would-be ham to file a legal challenge. How many lawyers are hams, or would like to be if not for the Morse requirement? All it takes is one. Sooner or later, a suit will be filed. When that happens, look for a petition to be filed to allow class-action status with thousands of other affected individuals then joining the lawsuit.

KC5WCP (seven@datasync.com) wrote:

: I want to just make clear that even though I favor the no-code side I
: also favor beefing up the written tests..

Well, I don't. I want to remove ALL requirements except one. Just send
in a boxtop from a specially marked package of Cheerios or Corn Flakes.
If you cannot afford a package, just see your local social worker, who
will provide one (and a postage stamp) to mail it. They will even help
you fill out the form - if you have never learned to read and write.

That gets it down to pure communication, and gets rid of all the unnecessary
tests that discriminate against those to lazy to earn their privileges.

First, You have no need to use anything more than a 4-5 amp fuse in your wiring for this setup unless you're planning on adding an amplifier for the HT. There are covered fuseholders which will take any of the blade fuses from 3 amps on up to 30 amps. You are well advised to fuse, and run directly from the battery. Underfusing a connection is a lot safer practice than overfusing. A blown fuse on your radio wiring is a lot easier to deal with than a burned up truck, and cheaper too. Going directly to the battery is not only wiser in lowering the amount of noise that you'll hear but it also lessens the chances for things like alternator whine. I also suggest that you run heavy guage wire, like No. 6 AWG, because you never know when you'll be tempted to try HF, or run an amplifier for even 2 meter dxing, and having to do it twice is really annoying. Remember, the fuse is to protect the radio & prevent fires, so a small one with large guage wire isn't a waste. Incidentally, you're probably better off with the automobile type fuses that come in blades, rather than the long thin glass ones I think you're describing, you haven't lived until you find out that your rig won't work because your glass fuse got vibrated to death.

That being said, look in the fusebox in your cab. There are often unused connections that either only require a fuse and minor wiring, or no wiring with one of the radio shack special fuse with a wire attached to one end to give you an extra dc connection. In any event be sure to route your wiring safely, where it won't get under foot or rubbed by anything, and isn't likely to cause a fire. Above all, fuse, fuse, fuse, fuse. Fuses are cheap, buy an extra set, and put them in the glove compartment. 73 de n8blk/3 -art clemons-

: What is it about Code Quick that sets it apart from the other training tapes?

Every other course I have used expects you to learn code by beeping at you.
If you don't have a good sense of timing, then you can't learn code that way.

Code quick uses "sound alike phrases" that convert code into words.
Other learning techniques are used to make learning quicker.

Code quick make it possible for you to learn code. It is a learning
system. There is also a pc program to help you learn code using the system,
but it is an additional item, not a replacement for the tapes.

Once you have learned the code, nothing is better than on the air
practice to get your speed up. One of the main advantages of code quick
is that you can copy sloppy (i.e. real world) code as you learn it. To me
it made copying code enjoyable.

Well you certainly are observant Charles! I think it's time to start
ANOTHER long thread on .435 in LA because you guys here in this NG
haven't been giving it much attention lately. Well I take that
back because Roy Tucker and his myriad of vanity calls took about
4 weeks to discuss in many threads.

As for the .435 machine itself there are SEVERAL problems with it
including a deaf receiver and the transmitter is only belching out
500 milliwatts or less at this time. All for the better I suppose.
It's much quieter now and most of the "Repeater Power Cows" have
gone elsewhere.

For those of you not familiar with the 147.435 box in LA please consult
its associated web page at:
http://dmz.net/n6uzs/buzz.htm
You can read all about it and Roy Tucker N6TK the owner there.

And come to think of it Roy gets excited when you talk about him
on the Internet. Brighten the old farts day with a reply. ;)

Just in time for Christmas. I have a mint condition Packard Bell Legend 836CDT for sale. This was top-of-the-line when I bought it in February, 1995.

Intel Pentium 100Mhz Processor
16megs RAM
1.275gig Connor Hard Drive
4X CD-ROM
16-bit Sound card
14.4 internal fax/modem

Includes a ton of bundled software plus all original boxes, manuals, receipts, plastic coverings, etc. Also, an extended service plan through Best Buy that covers everything through 2/20/99.

I paid $2800 for this machine just 22 months ago. It's been used daily, and
I have never had any problems with it. The "factory seal" is still

intact;
it's never been messed with. I've got my eyes on a new Pentium 200
monster,
so I will sell this one for $1000 firm. Cash. No checks, low-ballers,
trades, IOU's, etc. First $1000 cash gets it. Located in Orlando.
E-Mail for more information.

Well, as someone who aspires to be a ham, I'll wade in with my 2 cents worth:)

Although the CW requirement should not (and was not originally designed to) be used to weed out the non-committed. It does have that effect. However we should not use the outcome to dispute the requirement.

I am in favor of a CW requirement, since as someone previously said, the intelligence in a CW message can be received under very adverse conditions, and it can be transmitted by very primitive equipment. Just listen to the non-directional beacons on longwave sometime. Also, given the potentially primitive nature of the equipment needed, the ability to transmit CW has a minor civil defense aspect.

The need for learning CW is especially true, given that the government is phasing out its use. Not very long from now, only other hams will be able to understand emergency messages sent by CW.

Maybe the test should just be modified. Since, using my reasoning, CW is essentially an emergency backup, last resort kind of thing, maybe speed is less important, and they just need to test for accuracy in distinguishing letters and symbols at 3-5 WPM (similar to some aerobeacons).

5304. Digest of Articles - QST Oct 96 (Long - 39k)

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-30 00:00:00 UTC
From: wvanho@infinet.com
Message-ID: <5a86od$lbr@news1.infinet.com>
Source record: 208632
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the October, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:Heavy-Duty HF Propagation-Prediction/Analysis Software -
Part 2
Author>Straw, R. Dean - N6BV
Source>QST Oct 96, pp. 28-30
Abstract>Continuing from Part 1, QST Sep 96. Describes two more "heavy

duty" propagation programs: SKYCOM 2.0 and HFx, for Windows computers.

Digest>This is a continuation of the article, Part 1 of which appeared in the October, 1996 QST. It is a review of two more "heavy duty" propagation programs: SKYCOM 2.0 and HFx, both of which are usable only on Windows-based computers.

As is the case in the first part of this article, the author concentrates primarily on the operating features of the programs, not the accuracy of prediction. However, in the case of SKYCOM 2.0, he makes it clear that the calculating core is not as sophisticated as some of the others reviewed. It is based on MINIMUF, which is an older program that uses an extremely simplified model of the ionosphere. In addition, it calculates only the maximum usable frequency (MUF). It does not compute launch elevation angles nor predictions for each amateur band. Consequently, it is not be recommended for amateur use.

The other program, HFx, uses new and sophisticated ray-tracing algorithms, recently developed by U.S. Government agencies. A handy feature is the way one specifies the geographic locations of the transmitting and receiving sites. The program displays a world map on the monitor; the user simply moves the cursor to the desired places on the map and clicks the mouse.

HFx provides three prediction models. The first is the global area-coverage model. It plots a world map that indicates one variable at a time by means of color-shaded areas. The variables are: MUF, frequency of optimum traffic (FOT), and Highest Possible Frequency (HPF). It does not compute some other important factors, such as transmit launch angle or receiver signal-to-noise ratio (S/N).

The second model is called the Temporal model and creates a graph similar to those published monthly in QST's "How's DX?" column showing, MUF, FOT, and HPF for a single pair of transmit/receive sites. It does not compute the lowest usable frequency (LUF), so does not predict when the lower bands will open.

The third prediction mode is called the Hop mode. This creates detailed tables for a series of frequencies showing the propagation modes (the number of hops, or bounces off the F2 layer) and the S/N, MUF, transmit elevation angle, ionospheric loss, field strength at the receiver and percentage of the time that each mode is available.

HFx version 1.06 is available from Pacific-Sierra Research Corporation, 2901 28th Street, Santa Monica, CA 90405-2938, for the price of $129.

The author summarizes by stating that his favorites are CAPMan and VOACAP. He likes to use CAPMan for quick and easy point-to-point calculations and graphs. For large area-coverage maps and beautiful printed output, he uses VOACAP.

Title>TA2:The Gadget - An SWR Analyzer Add-On
Author>Hauff, Fred "Fritz" - W3NZ
Source>QST Oct 96, pp. 33-35
Abstract>How to make many types of measurements, other than antenna SWR, with an antenna analyzer. Contains instructions for building an accessory to make them possible.

Digest>This article is really about how to use an antenna analyzer, such as the MFJ-249, to make measurements other than antenna SWR readings. His first example is to measure the impedance of an unknown r.f. choke at different frequencies. He did that by putting a 50-ohm load on the output of the analyzer, connecting the choke to one side of the output and measuring the r.f. voltage between the other end of the choke and the other side of the load as the analyzer was swept through various frequencies. He found that no r.f. voltage was detectable above 6.0-mHz., hence the choke impedance was very high; but below that, r.f. was definitely coming through the choke, so it was not an effective component for such frequencies.

His next measurement was to determine the resonant frequency of a parallel capacitor and toroidal inductor circuit. It is usually not possible to determine this with a conventional dip meter because of the inability to couple to the magnetic circuit. He attached a wire to one side of the analyzer connector, ran the wire through the hole in the toroid, and attached the other end to the other side of the connector. This formed a one-turn coupling loop that allowed the analyzer to give a precise indication of resonance.

Next he used the same coupling method to measure the Q of the tuned circuit. He measured the output voltage at the resonant frequency, and adjusted the frequency both upward and downward to detect the frequencies at which the voltage dropped to 0.707 of the value at resonance. Then, to calculate the Q, he divided the center frequency by the difference between the upper and lower frequencies.

Another use was to measure the loss in a length of 50-ohm coax cable. With the 50-ohm load resistor still across the output connector, he attached the cable to the connector; at the other end of the cable he connected another 50-ohm resistor. Then he measured the voltage across the analyzer terminals at the input end, and also that at the output end of the coax. Loss in decibels is calculated as 20 times the ratio of the input voltage to the output voltage, divided by the output voltage.

Finally, he was able to plot the characteristics of a high-pass, low-pass, or band-pass filter by substituting it for the length of coax, and making the same measurements and calculations.

The "gadget" in the title of the article is a small piece of pc-board soldered to a PL-259 connector, with binding posts mounted on the board so that it is easy to attach the resistors and other small components used in the measurements described above. Also mounted on the board is a rectifier circuit to convert r.f. voltage to d.c. so that a

conventional digital voltmeter can be used to measure the analyzer output. The circuit uses a germanium diode (1N34) in series with a 220,000-ohm resistor connected in parallel with a 0.01-mF. capacitor. The rectified voltage appears across the resistor/capacitor so that it can be measured by the DVM. The article shows a schematic diagram and photographs of the board as assembled by the author.

Title>TA3:Get On 440-MHz ATV! - Part 1
Author>Sheets, William - K2MQJ and Graf, Rudolf F. - KA2CWL
Source>QST Oct 96, pp. 36-40
Abstract>First of three parts; assembling an Amateur TV (ATV) station. Contains construction information to build a receive downconverter for changing 440-MHz. signals to TV channels 3 or 4 (61.25- or 67.25-mHz.).

Digest>This the first part of a three-part article giving construction details and operating instructions for assembling and building an amateur television transmitting station (ATV). Requirements include a video camera, a VCR, a TV monitor, all of which are relatively common consumer electronic items, plus a receive downconverter and a 440-mHz. transmitter. This first part gives the details for building a tunable downconverter.

The downconverter converts signals in the 420- to 440-mHz. range to a 61.25- or 67.25-mHz. i.f. output (TV channels 3 or 4). The unit contains only five transistors and building it would appear to be well within the capability of an amateur who has had some VHF or UHF building experience. A complete schematic diagram and parts list are included, along with detailed instructions concerning all unusual aspects of the system.

An etched and drilled PC-board and complete kit of parts for the converter are available from North Country Radio, PO Box 53, Wykagyl Station, New Rochelle, NY 10804-0053. The purchase price is not listed in the article; the author recommends that a prospective buyer contact the manufacturer directly, by telephone at (914) 235-6611, for details.

Title>TA4:A Home Brew, Light Duty, Metal Brake
Author>Cebik, L. B. - W4RNL
Source>QST Oct 96, pp. 41-43
Abstract>Construction details for a small, simple metal brake for bending light-gauge aluminum or steel sheet.

Digest>Hams who do any construction of any kind, or even home maintenance, often find the need to bend light sheet metal for making boxes, brackets, or other kinds of knick-knacks. It is very difficult to do a neat job of bending even the lightest metal without a brake of some kind. W4RNL, who got tired of trying to do a passable job using blocks of wood, a vise and a hammer, designed and built a simple brake out of pieces of 1- x 4-inch lumber, flat hinges, and 1- x 6-inch "mending bars" obtained from a hardware store. In this article, he

gives complete construction details and hints concerning its use. With the device, plus a workbench and several C-clamps, one can bend sheet aluminum, or even light-gauge steel, neatly and with reasonable precision.

It should be noted that an all metal, commercially built device similar to this is sold by some auto-parts distributors and hardware stores, as well a by the mail-order supplier: J. C. Whitney, Box 8410, Chicago, IL 60680. The price is of the order of $25.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:MFJ Model 9406 6-Meter SSB Transceiver
Author>Budnik, Peter - KB1HY
Source>QST Oct 96, pp. 63-65
Abstract>Review of a very small and inexpensive 6-meter transceiver. Operates SSB or (optional) CW; transmits 10-watts maximum.

Digest>The MFJ-9406 is a very small and inexpensive, basic transceiver for the 6-meter band. The cabinet is approximately 6-inches square and 2.5-inches high, weighing about 2-pounds. The front panel contains a vernier-driven analog frequency knob, an S-meter, a volume control, and a "fine-tune" knob. This last control shifts the frequency about 2-kHz. up and down, and is useful for compensating for drift during extended QSOs. Also on the front panel are switches and a keying jack.

The rig operates in SSB and, with an optional board, CW. Its maximum power output is 10-watts PEP, in SSB mode; 5- to 8-watts in CW.

The unit operates on 13.8-volts d.c. and draws about 2.0-amps while transmitting, 60-milliamps while receiving. The manufacturer offers a plugin-cube power supply which the reviewer found to be huge "clunky bit of apparatus", so big that it covers three outlets on a typical strip. For portable use, MFJ offers the optional MFJ-4114 battery pack that holds 10 NiCd batteries to provide approximately 12.5-volts.

In operation, the reviewer found the transceiver to be fun to use, but it is a basic rig and lacks many of the features to which operators of top-line transceivers have become accustomed. The local oscillator is not a synthesizer, and it does drift slightly. There is no noise limiter, so the reviewer does not recommend it for mobile use. Most inconveniently, it does not have a headphone jack!

On the air, the 10-watts output was found to be sufficient to work almost any station the reviewer could hear. All his contacts gave reports of good audio. The r.f. preamplifier made it possible to copy signals that were down in the noise, and the 6-pole crystal i.f. filter seemed to do an adequate job, most of the time, in avoiding QRM problems from close-in strong stations. But he did complain about the need for

frequent fine tuning to compensate for drift during long SSB QSOs.

The manufacturer's list price for the transceiver is $259.95, including the hand mike. The a.c. power supply adds $39.95; the NiCd battery pack $69.95; the CW adapter $39.95.

Title>PR2:QST Compares Medium-Power 2-Meter Amplifiers
Author>Ford, Steve - WB8IMY
Source>QST Oct 96, pp. 66-68
Abstract>Review of four 2-meter amplifiers built by Mirage, TE Systems, Teletec, and Tucker. All produce between 100- and 180-watts, maximum. Usable for mobile or fixed-station.

Digest>This review concerns four 2-meter amplifiers that can produce maximum power output of 100- to 180-watts, when driven with a suitable exciter. They are all rugged, well designed for either mobile or fixed-station use.

Mirage B-5016G

The B-5016G is one of a family of amplifiers that will produce maximum output of 160-watts when driven with a 50-watt input. Other models in the family put out the same maximum power but with lower input power. The B-1016G needs only 10-watts of drive, and the B-2516 25-watts, to drive them to full output.

The B-5016G contains circuitry for protection from the effects of SWR in excess of 3:1, operating temperature above 175-degrees F. (79-degrees C.) and excessive r.f. drive (over 55-watts). If any of the three maxima is exceeded, the amplifier immediately shuts down.

The unit contains a GaAs FET receive preamplifier which can be shut off, if not wanted, by a front-panel switch. When the unit senses the presence of r.f. drive, it switches from receive to transmit; but automatic control can be disabled and control performed remotely via a keying jack on the back of the chassis. The switching delay time can be selected through an SSB/FM switch on the front panel, and the amount of SSB delay can be adjusted with an internal potentiometer.

All controls can be manipulated remotely, if desired. Although the amplifier is rated to put out a maximum 160-watts with 50-watts of drive, the ARRL laboratory found that the test unit would put out 160-watts with only 39-watts of input and, with 50-watt drive, it actually emitted 179-watts. The manufacturer's list price is $299; an optional accessory to allow remote control adds $45.

TE Systems 1412-G

This unit offers 160-watt output with 30-watts of excitation, and includes a receive preamplifier. There is a switch to select FM or SSB delay, and the SSB delay can be adjusted by a pot on the rear panel. Both the power amplifier and the preamp have separate In/Out switches.

All switch controls can be actuated remotely.

Power requirements are 13.6-volts d.c. at 22-amps of current, when fully driven. The amplifier does not contain SWR or overdrive protective shutdown, although it will shut off if the operating temperature rises above 149-degrees F. (65-degrees C). The manufacturer's list price is $275.

Teletec DXP-V175

This amplifier is rated for 180-watt maximum output with 50-watt drive, but in the laboratory, the test amplifier produced 222-watts with that amount of excitation. It includes protection against high SWR and also temperatures above 212-degrees F. (100-degrees C), but there is no protection against excessive drive.

The front panel contains only one control, and that is an On/Off switch. There is no FM/SSB mode switch; one must adjust the delay time by a screwdriver adjustment of a pot through a hole in the bottom panel. The manufacturer states that, since the amplifier operates in Class AB2, it does not need an FM/SSB switch. Also, there is no switch for the receive preamplifier; it can be shut off by applying 13.8-volts in a jack on the rear panel, a feature that is useful for remote switching. Another rear panel allows Transmit/Receive switching to be done externally. The list price of the DXP-V175 is $289.

Tucker V-100W

The V-100W is the smallest amplifier with the lowest maximum power rating, and also the lowest price, of any of the four reviewed. It is especially designed for use with HTs. An HT that will put out 2-watts can drive this amplifier to its full rated 100-watt output! Even with only 0.5-watts drive, it will produce 50-watts output. The extremely low drive requirement also makes the V-100W attractive for use with transverters, which typically put out very low power.

The amplifier also contains a receive preamplifier that provides unusually high gain for weak-signal work. Protection against excessive SWR is built-in, but there is no high-temperature cutout. There is no provision for remote controls, except for an external Transmit/Receive keying jack on the back panel.

The manufacturer's list price is $199.

Title>PR3:AEA HALO-6 Antenna for 6-Meters
Author>Lindquist, Rick - KX4V
Source>QST Oct 96, p. 69
Abstract>Review of a 6-meter horizontal loop antenna for mobile use.

Digest>In general, a halo antenna is a horizontal loop that is somewhat less than a half wavelength in circumference. The loop is formed of a single conductor, fed in the middle, with the two ends bent around to

form a circle. Where the two ends come together, they are attached to the two sides of a capacitor that tunes the antenna to resonance.

The HALO-6 is formed from a strip of anodized aluminum, 1-1/2-inches (38-mm.) wide and 6-inches (15-cm.) longer than enough to form a circle; the excess metal overlaps the other end, forming a capacitor. The two ends are separated and held in position by ceramic insulators. One end of the loop is slotted so that the amount of overlap can be adjusted to tune the antenna from one end of the band to the other.

It is fed through a gamma circuit; i.e. the shield of the coax is attached to the strip in the middle, and the center conductor is extended by a gamma wire that follows the curve of the aluminum strip to a point where it is attached physically and electrically. A mounting bracket is provided to support the loop, at the feed point, from a vertical mast. A horizontal length of PVC pipe spans the loop diametrically, from the mast to the overlap area, to hold it in place.

The antenna is rated up to 750-watts. The manufacturer states that it should provide some 500-kHz. of bandwidth between the 2:1 SWR points.

The reviewer mounted his antenna on a 15-foot (4.6-m.) aluminum mast next to his house, and operated on the band with a 10-watt transmitter. He found that he was able to hear and work stations in all directions, with good reports on both ends of the QSOs. He feels that it would be a good choice for either mobile or fixed-station use.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Off-Center-Fed Dipole, Part 2
Author>Formato, Richard A. - K1POO
Source>QST Oct 96, pp. 72-73
Abstract>A computer analysis of a half-wave dipole, on one frequency, fed 1/3 of the distance from one end, operating on the fundamental, second-, third- and fourth-harmonics.

Digest>The subject of a four-band dipole, fed off-center, was raised by G0FAH in his article: "Four Bands, Off-Center" in QST Feb 96. His antenna was fed at a point 1/3 of the way from one end. K1POO, in Technical Correspondence, QST May 96 wrote a letter: "Improved Feed for the Off-Center-Fed Dipole", in which he suggested that the conventional "1/3 feed" was not the optimum choice. N6BV furnished additional comments that were appended to K1POO's letter. Now, K1POO has continued the discussion in the current letter. He took the dimensions from G0FAH's original article and ran computer calculations to determine the impedance and SWR performances on four bands, with various feedpoints.

The dipole that he modeled is 21.03-meters (69.0-feet) long, made of 0.0253-cm. (.010-inch) diameter wire. He modeled three feedpoint

locations: 3.65-, 6.98-, and 8.65-meters (11.98-, 22.8-, and 28.4-feet)from the end of the antenna. He then plotted a graph showing the SWR at each feedpoint for every frequency from 5.0- to 30.0-mHz. Since the dipole is very close to a half-wavelength at 40-meters, the graph shows that it resonates at the first, second, third, and fourth harmonics, which are in the 40-, 20-, 15-, and 10-meter bands. The plot shows that with the feedpoints at 3.65- or 8.65-meters from the end, very low SWR readings are obtained in or near each of the bands. But when the 1/3 feedpoint is used, (6.98-meters), the antenna is unusable on the 15-meter band!

He also plotted another graph showing the antenna performance across the 40-meter band, alone, with each of the feedpoints in use. When the 3.65-meter feedpoint is used, the lowest SWR reading is less than 1.3:1 at about 6.95-mHz., just outside the lower end of the band. As the frequency increases, the SWR rises rapidly and exceeds 3:1 at about 7.28-mHz.

When the antenna is fed at the 6.98-meter point, the lowest SWR occurs between 7.0- and 7.1-mHz., and above that it rises only moderately, reaching about 2.4:1 at 7.3-mHz. With the 8.65-meter feedpoint, the SWR curve is nearly flat, ranging from about 2.5:1 to some 2.8:1, with the lowest reading at 7.1-mHz.

Title>TC2:Off-Center-Fed Dipole, Part 3
Author>Hill, Roy O., Jr. - W4PID
Source>QST Oct 96, p. 73
Abstract>Describes a 3-band off-center-fed dipole dating from 30-years ago.

Digest>W4PID reports on an off-center-fed dipole for 80-, 40-, and 20-meters that he designed and built more than 30-years ago, using a simple design concept that he claims was common knowledge at that time. It states that the impedance of a half-wave dipole is about 72-ohms at the center, and some 4000-ohms at each end. The impedance at every point between the center and the ends falls very near a straight line when plotted on semilog paper.

He shows such a plot of an 80-meter dipole then, on the same graph, plotted the same antenna on the second and fourth harmonics (40- and 20-meters). A remarkable fact is that all three lines intersect with about 280-ohms impedance at a spot almost exactly 1/3 of the way from one end. The author states that he erected an antenna 124-feet (37.8-m.) long and fed it with 300-ohm ribbon at 80-feet (24.4-m.) from one end. He used an antenna tuner with it because, at that time, all hams were strongly advised to use antenna tuners. The main purpose was to suppress harmonics that caused TVI, then the worst problem facing radio hams. He has been using the antenna ever since and always has had excellent results.

LAB NOTES (LN)
Prepared by the ARRL Laboratory Staff

Title>LN1:Here Comes the Sun!
Author>Anonymous
Source>QST Oct 96, pp. 74-75
Abstract>A primer on the sunspot cycle and its effects on amateur radio.

Digest>This article is a concise description of the sunspot cycle and its effect on HF radio propagation. The activity of sunspots correlates well with HF propagation because they represent storms on the sun's surface and greatly affect the "solar wind". That is the name given to the continuous rain of charged particles that the sun emits at very high velocities, and which impinge on the earth's upper atmosphere, causing the rarified air at very high altitude to become ionized. It forms the so-called ionosphere that causes radio signals to bounce back to earth at long distances from the transmitter. The more sunspots that occur, the greater the ionization becomes and the better are DX conditions for eager hams.

Sunspots wax and wane over a cycle that repeats at approximately 11-year intervals. In 1996, we are at the low ebb of the cycle and bands at higher frequencies than 20-meters are not very useful for anything but local communication. By about 1999, DX conditions will once again improve, and the 10-meter band will become highly popular.

At the peak of the sunspot cycle, although average propagation conditions will be favorable for long-distance HF propagation, it does not mean that conditions will be favorable at all times. There are several types of major disturbances that occasionally occur on the sun that can impede or, in extreme cases, obliterate radio propagation. Solar flares, coronal holes, and sudden disappearing filaments can cause geomagnetic storms that interfere greatly with terrestrial communications.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:An Improved Ohmmeter With a Linear Scale
Author>Shapiro, Gene - W0DLQ
Source>QST Oct 96, p. 70
Abstract>Updates a design from QST Nov 82 to make it more sensitive.

Digest>W0DLQ refers to an article by W9QB in QST Nov 1982: "An Ohmmeter With a Linear Scale". He built a unit in accordance with W9QB's design and found it very useful. However, it was not useable for measuring low-value resistances, such as those below 100-ohms. He points out that, if one substitutes a Texas Instrument opamp: TLE-2061CP for the opamp in the design, it will extend the performance to the lower

ranges, with excellent results. He illustrates his comments by a complete schematic diagram of the upgraded circuit.

Title>HK2:Pipe Elbows Redirect Sound
Author>Guillaume, J. B. - N5CPE
Source>QST Oct 96, p. 70
Abstract>An easy way to redirect the sound from a top-mounted speaker so that it is directed horizontally outward.

Digest>Receivers that have top-mounted speakers direct the sound upward, which sometimes causes problems in noisy surroundings. N5CPE found that, if he takes a 2- or 3-inch (5.1- or 7.6-cm.) diameter plastic pipe 90-degree elbow and cuts the flange off one end, it can be set on top of a speaker and will effectively redirect the sound horizontally outward.

Title>HK3:MFJ-432 Voice Keyer Remote Switch Activation
Author>Zimmerman, Jim - KG6VI
Source>QST Oct 96, pp. 70-71
Abstract>An inexpensive accessory to provide remote actuation of voice keyer switching.

Digest>The MFJ-432 voice keyer provides four programmable voice memories that are activated by momentary switches on the front panel. Often, it is more convenient to actuate these memories remotely. KG6VI suggests a convenient way to effect this. He installed an 8-pin microphone jack on the rear panel, and wired it in parallel with the momentary switches. Then he connected a length of 8-conductor rotor cable, terminated with an 8-pin mike plug, to a remote switch box that he built in a minibox containing Radio Shack SPST momentary switches. The total cost of the wire, mike plug and jack was about $5, and the Minibox and remote switch parts about $10.

Title>HK4:Adding Transverter Operation to the TenTek Omni VI
Author>Kachel, Mark W. - N0OKS
Source>QST Oct 96, p. 71
Abstract>Modification details for adding transverter drive to the Omni VI.

Digest>The Omni VI transceiver does not have a low-level transmit output that would be suitable to drive a transverter, so N0OKS modified his Omni to provide such output. An appropriate low-level signal, at about 3-dBm., can be accessed at connector 24 on the band-pass filter/front end board, so he used a miniature coax cable to run from that point to a double-throw switch and connector that he installed on the back panel. This letter contains detailed instructions.

Title>HK5:CMOS Super Keyer 2 and 3 Low-Current Speaker
Author>Lewis, Robert W. - AA4PB

Source>QST Oct 96, p. 71
Abstract>Substitution of a piezo-electric speaker to reduce current consumption.

Digest>The CMOS Super Keyer 2 was described in ARRL Handbooks from 1992 through 1995; version 3 was described in QST Aug 95. In use, both draw very low current until the monitor sidetone is switched on. Then it draws 40-mA. AA4PB points out that a piezo-electric speaker element can be substituted for the 8-ohm speaker, which will reduce the current drain to only 1.5-mA.

Title>HK6:CMOS Super Keyer 3 Negative-Bias Keying
Author>Cornell, David A. - K9BO
Source>QST Oct 96, p. 71
Abstract>A simple circuit to adapt the Super Keyer 3 to negative-bias keying.

Digest>As originally designed, the Super Keyer 3 cannot be used to key negative-bias keying lines. K9BO used a PNP transistor in a simple circuit to make the polarity conversion. A circuit diagram is included.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Oct 96, pp. 53-54
Abstract>Questions and answers of primary interest to amateur radio newcomers.

Digest>Questions discussed in this issue include: charge controllers for NiCd batteries; "soft tubes" in tube-type receivers; buying and selling ham gear on the packet network; problems of distorted audio in repeater operations; potential damage to mobile radio gear from starting the vehicle; Internet audio; cleaning the dust out of antique equipment; and other subjects.

Title>NHC2:Don't Look Down!
Author>Bowyer, Wayne - N4EYZ
Source>QST Oct 96, pp. 55-57
Abstract>The experiences of a high-tower worker.

Digest>N4EYZ works for a commercial tower service company and spends much of his working life on top of towers as high as 1000-feet (305-m.) above the ground. His article tells how it feels to be up so high. Many interesting photographs accompany the article.

Title>NHC3:For Want of an Elmer
Author>Ford, Steve - WB8IMY

Source>QST Oct 96, p. 58
Abstract>Why every new ham needs an "Elmer" - an experienced ham to show him the ropes.

Digest>WB8IMY tells of his own experiences when he first became a ham. In the very beginning, he made some mistakes that were very frustrating, and wasted much time and effort needlessly. He uses these stories to illustrate the need that every new ham has for an "Elmer", who can give some guidance in getting started.

Almost anyone can find an experienced ham who would be willing to help. For those few cases in which such help cannot be found locally, the Internet now provides a sure alternative. Check out the World Wide Web site: http://www.gonix.com/pschleck/Elmers/

Title:NHC4:Breaking the Sound Barrier
Author>Gilchrist, Robert - A92FZ
Source>QST Oct 96, pp. 60-62
Abstract>A 10-point plan to improve one's DX skills.

Digest>Mr. Gilchrist is the former VK1BOB, and now lives in Bahrain, in the Arabian Gulf. When he comes on the air, he invariably causes an immense pileup, so he has ample experience in DX operations. In this article, he outlines gives hints for operating procedures that will enhance others' ability to capture elusive DX contacts. They are in the form of a "10-Point Plan":

1. If one is using a beam antenna, make sure it is properly pointed.
2. Tune up off the calling frequency.
3. In operating SSB, use a speech processor, if one is available.
4. On CW, zero beat with the frequency of the last station contacted.
5. Follow the rules established by the DX operator, such as using split frequencies, waiting for your call area to be called, etc.
6. Don't waste time sending his callsign; announce yours, only.
7. Use the international phonetic alphabet.
8. Call only when invited.
9. Use a digital recording system (DRS), if available.
10. Be tenacious.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:An Antarctic DXpedition
Author>Baker, William F. - KA1WEG
Source>QST Oct 96, pp. 31-32
Abstract>Operating ham radio from the open deck of a ship cruising Antarctic waters.

Digest>KA1WEG is the president of a public television station and has led groups of patrons on guided tours to both the north and south polar regions. His latest one was aboard a nearly new cruise ship to

Antarctica. He carried with him an HF transceiver and a wire antenna; the captain allowed him to hoist the antenna on a halyard to the top of the ship's stack while he was operating his radio. He was not allowed to operate from a cabin, so had to stand on the deck with the rig while the temperature was below freezing and the winds high. Under these less than optimum operating conditions, he made more than 300 QSOs all over the world.

Title>GI2:Brass and Steel
Author>Henderson, Rob - KB7PWJ
Source>QST Oct 96, pp. 44-46
Abstract>This article tells of the experiences of several radio hams who, during World War 2, served through the war in either the U.S. Navy or Merchant Marine.

Title>GI3:"Antenna Here is a Full-Size Rhombic at 170-Feet"
Author>Davis, Brian - W9HLQ
Source>QST Oct 96, pp. 50-52
Abstract>Operating ham radio from one of the world's greatest HF "antenna farms" - the late Voice of America transmitter site in Ohio.

Digest>For more than 50-years, the Voice of America operated a high-power HF broadcasting facility at Bethany, Ohio, a few miles north of Cincinnati. Occupying a square mile of land, it ran six 250,000-watt transmitters on selected frequencies, simultaneously, broadcasting to various nations. On the site was one of the most fabulous "antenna farms" of all time, with rhombics and Sterba curtain antennas aimed at various countries throughout the world.

Early in 1996, it was announced that the entire site would shortly close down. The author, and several other members of the Saturn Radio Group of Chicago, Illinois made arrangements to operate an amateur station, utilizing some of the antennas on the site, for a one-time "field day" on May 16, 1996. This is the story of how they set up their equipment and the contacts that they made.

5305. Digest of Articles - QST Nov 96 (Long - 31k)

Following are digests of articles printed in the November, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Build a Power Attenuator
Author>Basilier, Erik - WU7O
Source>QST Nov 96, pp. 31-33
Abstract>Construction of two models of power attenuators, a high-power, oil-cooled type and a lower-power, dry type. Either provides attenuation and power dissipation of more than 30-dB.

Digest>Anyone wanting to use a spectrum analyzer to test the signal purity of a transmitter faces the problem of getting a low-level sample of transmitter output. WU7O designed and built a combined dummy-load and attenuator providing attenuation of more than 30-dB. By definition, spectral purity checks require accurate measurements at higher harmonics, so the attenuator must provide uniform attenuation at frequencies well into the UHF range. In addition to its use with a spectrum analyzer, the same unit can also be used as a QRP transmitter or to provide the excitation for a transverter.

The author built two models, using high-power, non-inductive resistors and other components from commercially-available dummy loads. One model is oil-cooled and capable of dissipating full legal power (1500-watts) for up to 9-seconds. The other model is dry, but can handle several hundred watts for short periods.

Electrically, both units are comprised of a single "T-pad" containing two 50-ohm resistors in series as the arms of the "T", and a number of parallel-connected 20-ohm, 2-watt carbon resistors as the "stem" of the "T".

The oil-cooled, high-power version is made from two MFJ-250 oil-cooled dummy loads. The 50-ohm resistor is removed from one of the two cans and mounted alongside the similar resistor inside the other can. Several pieces of thin brass sheet are cut, drilled, and shaped to form the support, as well as electrical connections, between the two high-power resistors and eight 20-ohm resistors.

The lower-power, dry model uses a single MFJ-264. The original, high-power resistor is used as the input arm of the "T". The output arm is four parallel-connected 200-ohm, one-half-watt carbon composite resistors. The stem of the "T" is twelve parallel-connected 20-ohm, 2-watt carbon composite resistors.

Dimensioned drawings are included, showing all aspects of construction for both models.

In operation, the high-power model provides 32.4-dB. of attenuation, flat to within 0.1-dB. from 1.8- to 146-mHz.; above that frequency, it drops slowly, reaching 30.6-dB. at 435-mHz. The SWR is less than 1.25:1 from 1.8- to 250-mHz.; at 435-mHz. it rises to 3.57:1.

The dry unit provides 35.5-dB. of attenuation from 1.8- to 50-mHz., and drops to 29.2-dB. at 435-mHz. The SWR is less than 1.13:1 from 1.8- to 146-mHz., and rises only to 1.75:1 at 435-mHz.

Title>TA2:Recycling TV Antennas for 2-Meter Use
Author>:Lumachi, Ronald - WB@CQM
Source>QST Nov 96, pp. 34-36
Abstract>Describes the salvage value of old TV antennas which can be scavenged for materials to build 2-meter beams.

Digest>Often, when old TV antennas are scrapped, aluminum rod and tubing, mounting brackets, insulators, and other components can be salvaged and put to good use in making various types of 2-meter antennas. In this article, several photographs illustrate various kinds of components from typical scrapped antennas.

As an illustration, the author shows a 5-element 2-meter Yagi that he built from scrap. It is of conventional design in all aspects except the feed arrangement. He recommends an inductive feed that uses a stub antenna fed in the center by 50-ohm coax. The stub is made of coax and slipped inside the tubing of the driven element.

The driven element is split in two, supported by an insulating bracket at the center. The stub is formed of a piece of coax, cut to a length of 18.4-inches (46.7-cm.). At both ends, the center conductor is soldered to the shield braid. The ends are covered with shrink tubing to insulate them.

At the center of the stub, the braid is carefully cut in such way that the foam dielectric is not damaged, and the two ends are pushed back to form a one-inch gap. The individual fine braid wires are combed out for a half-inch on each side, and twisted to form pigtails. The feed coax is connected to the pigtails, and the two halves of the stub are inserted into the two sides of the driven element.

In use, the r.f. current from the transmitter flows into the stub, which acts like a folded dipole; it induces the full power into the antenna element. The author reports that the inductive coupling provides a low SWR over the entire 2-meter band.

Title>TA3:Get on 440-MHz ATV! - Part 2
Author>Sheets, William - K2MQJ and Graf, Rudolph F. - KA2CWL
Source>QST Nov 96, pp. 37-42
Abstract>Part 2 of a 3-part article on the construction and assembly of an ATV station. This part contains construction information for the transmitter.

Digest>Part 1 of this article described a 440-mHz. converter; this part describes the construction of a 2-watt, 3-channel ATV transmitter. The circuit design is straightforward, but slightly more complex than that of the receive downconverter.

The r.f. carrier section uses a crystal oscillator, with three switch-selected crystals, to generate a signal between 52- and 55-mHz. Following this are three stages of doublers to multiply the frequency by eight, putting it into the 440-mHz. band, and a final amplifier that produces 2-watts output. An audio amplifier controls a VCO that generates a 4.5-mHz. subcarrier modulated by FM. This output is combined with the video input to a modulator stage that amplitude-modulates the final amplifier.

The article contains a complete schematic diagram and parts list and give detailed construction hints. The author states that an average ham

with some r.f. experience should have few, if any, problems building the unit.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Sr. Asst. Technical Editor

Title>PR1:QST Compares: 2-Mobile Transceivers
Author>Various
Source>QST Nov 96, pp. 60-68
Abstract>Performance testing of seven 2-meter transceivers made by: ADI, Alinco, ICOM, Kenwood, Radio Shack, Ten-Tec, and Yaesu.

Digest>This article reviews seven 2-meter transceivers: the ADI AR-146, the Alinco DR-150T, ICOM's IC-2000H, Kenwood's TM-261A, the Radio Shack HTX-242, the Ten-Tec T-kit 1220, and Yaesu's FT-3000M. All of them, except the Ten-Tec, are complete units with many common features. The Ten-Tec is a kit, for home building, and is a basic unit that lacks many of the features the others possess. However all of them, including the Ten-Tec, are very compact, give excellent performance in fixed station or mobile use, transmit output power of the order of 50-watts, and have memory channels and CTCSS encoders.

All units except the Ten-Tec offer scanning and provide most of the operating controls built into the hand mike. The Ten-Tec offers no scanning, and has only a Push-to-Talk switch built into the mike.

All except Ten-Tec give extended VHF FM reception on bands in addition to the amateur 2-meter band; all but Ten-Tec, Radio Shack and ADI offer AM aviation-band reception. The Alinco and the Yaesu offer the capability of operating 9600-bit/sec packet; all but Ten-Tec and ADI provide automatic repeater offset.

Typical street price for the ADI is $240; for the Alinco, $285; the ICOM, $277; the Kenwood, $277; the Radio Shack, $300; the Ten-Tec kit, $259; and the Yaesu, $481.

Title>TC1:A Comparison of HF Digital Protocols - Revisited
Author>Sussman, Phil - KB8LUJ, Hopper, Ken - N9VV, Breit, Julius - W9UWE, and Meyer, Michael - DL1GBM
Source>QST Nov 96, pp. 71-72
Abstract>Continued discussion of the effectiveness of the various digital protocols in use by radio amateurs. Pactor 2 surpasses all others in characters-per-second throughput under most conditions.

Digest>The authors of this letter make comments about the article by Riley, Bodson, Rieman, and Sparkman: "A Comparison of HF Digital Protocols" in QST Jul 96. They note that the earlier article showed graphs plotted with different scales, so it was difficult to make comparisons between them.

This letter includes four graphs of throughput versus signal-to-noise ratio, all having uniform scales. Each graph plots the data throughput, in characters per second, for each of six different protocols: Amtor, Pactor-1A, Pactor-2, Clover, and Clover-P38. The first graph plots the response under conditions of additive white Gaussian noise (AWGN); the second under CCII-good conditions; the third under CCII-poor conditions; and the fourth under conditions of Rayleigh fading.

All four graphs show that Pactor-2 is substantially better than any of the others. In fact, each graph shows that Pactor-2 can successfully transmit between 5- and 15-characters per second, even with the signal level 10-dB. below the noise level! No other protocol can deliver significant throughput when the signal level is more than 2- or 3-dB. below that of the noise.

As the S/N gets higher, the throughput curve for Pactor-2 rises more rapidly than that for any other protocol and, at high S/N, reaches a throughput more than twice that of any other, except for Clover. When the S/N ratios are zero or above, Clover provides higher throughputs than any of the others except for Pactor-2, but still rates far below that system. These two leaders surpass the rest, largely because they both use phase-shift keying (PSK). All the others use frequency-shift keying (FSK).

Of the FSK protocols, G-Tor and Pactor-1 give the best performance. Amtor is at the bottom because it is the oldest of the amateur protocols and is the least sophisticated. Even under conditions of very high S/N, Amtor throughput never exceeds about 10-characters per second, whereas Pactor-2, under good conditions, frequently surpasses 100-characters per second.

LAB NOTES (LN)
Prepared by the ARRL Laboratory Staff

Title>LN1:Multiband Dipoles Compared
Author>Gruber, Mike - WA1SVF
Source>QST Nov 96, pp. 73-74
Abstract>Comparison of three types of multiband dipoles: a single, adjustable-length wire; fan dipoles using a common feed; and multiband trap dipoles.

Digest>In this article, WA1SVF compares dipoles for use on various bands, with or without antenna tuners. A dipole that measures a half-wavelength on a low-frequency band can be used on higher frequency bands with an antenna tuner, but the radiation pattern changes

between bands. The pattern of a half-wave dipole is a fat "figure 8" with maximum radiation at right angles to the wire. Operated on odd-numbered harmonics, its maximum radiation is still at right angles to the wire, but the main lobes are narrower; the higher the harmonic, the narrower they become. On even-numbered harmonics, the radiation pattern is like a four-leaf clover, with deep nulls in line with the wire, and also at right angles to it.

Next, the author describes two ways that a single antenna can be made to operate as a half-wave dipole on multiple bands. One way is to make it easy to adjust the length of a single dipole. Cut the wire to a half-wavelength on the highest band desired, and insert insulators at both ends; attach an additional length of wire to both ends to cause the combined lengths to equal a half-wavelength on the next lower band, and again attach insulators to the ends. Repeat for each band desired. In operation, wire jumpers with alligator clips at both ends are used to short across the insulators to form a dipole on any desired band. Of course, changing bands requires the wire to be lowered and the jumpers changed.

As an alternative, the fan dipole is described. This is comprised of a single feedline to which a number of dipoles, cut for different bands, are connected. In one configuration, the dipole for the lowest frequency band is supported at both ends; the shorter ones are terminated by insulators that are simply hung onto the longer wire. Thus, all the dipoles are strung very close together, consequently they are closely coupled to each other. This causes problems in pruning the lengths to tune the resonant frequencies, since the adjustments interact. One way to overcome the problem is to string the outer ends of the antennas to separate supports, allowing more space between them. The other is to use an antenna tuner to make the final adjustments when working each band.

The reason that a single feedline can feed multiple dipoles, in parallel, is that the one that is resonant shows a low impedance at its feedpoint; all the others are much higher. Therefore, almost all of the power flows into the resonant wire, and the others are inactive.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G

Title>HK1:Switched Cable Sections Reduce SWR
Author>Pellock, John - K6YO
Source>QST Nov 96, p. 69
Abstract>Describes a system of relays that allows changing of the length of coax feedlines for SWR reduction.

Digest>K6YO has a large "antenna farm" and changes antennas frequently. Although he uses an antenna tuner, often he finds the mismatch is so extreme in a particular antenna that the tuner cannot tune it out. An

easy way to overcome the problem is to change the length of the antenna feedline until it presents an impedance within range of the tuner.

To facilitate changing the lengths of feedlines, he made an adjustable-length cable to attach to the end of the existing feedline. He assembled lengths of coax cut to lengths of 1-, 2-, 4-, and 8-feet (.30-, .61-, 1.22-, 2.44-m.), with connectors on both ends. By connecting the proper segments in a binary fashion, he could obtain any desired effective length from 1- to 15-feet. This arrangement works well, but it became tedious to have to go outdoors and change segments every time he switched bands.

Finally, he arranged a series of relays with a multi-bank rotary switch wired so that each step of the switch connects the binary-selected segments to add 1-foot increments. Now he can do the tuning by remote control from his operating position.

Title>HK2:MFJ-249 SWR Analyzer Tunes Amplifiers, Frequency Spots Old Receivers
Author>Nickels, Bob - KE0T
Source>QST Nov 96, p. 69
Abstract>Describes two additional functions the MFJ-249 antenna analyzer can perform in amateur radio operation.

Digest>KE0T, in this letter, adds two more uses for the MFJ-249 to the many others that have been suggested in recent issues of QST. His first suggestion is to prealign the output network of solid-state amplifiers, using the analyzer to avoid overstressing the amplifier's components. He follows the technique described on p. 61 of SOLID STATE DESIGN FOR THE RADIO AMATEUR, published by the ARRL.

His second suggestion is to use the analyzer's frequency counter to set an old receiver having an analog dial to desired frequencies.

Title>HK3:A Super Simple Mobile H-T Holder
Author>Harris, Art - N2AH
Source>QST Nov 96, p. 69
Abstract>A simple and effective way to mount an H-T transceiver in a Dodge Minivan for mobile use.

Digest>N2AH likes to use his new, tiny H-T while driving his Dodge Minivan. He fashioned a convenient holder from a heavy plastic cup that fits snugly into one of the cup holders that are molded into the dash just above the car AM/FM radio. To hold the rig tightly, he slid the belt clip of the H-T over the side of the cup. The cup's height is such to put the bottom of the H-T on top of the dash, providing excellent visibility and access to the controls.

For extra safety, he fastened the cup firmly to the cup holder. He reinforced the cup with a piece of wood cut so that it slips into the cup, clear to the bottom, across a diameter. When cemented in place

with silicone sealant, it gives the cup sufficient strength to hold the rig securely.

Title>HK4:Make Your Own Magnetic Signs
Author>Riley, William
Source>QST Nov 96, pp. 69-70
Abstract>Cites suppliers from whom materials can be obtained to make magnetic signs for use on the sides of vehicles.

Digest>On occasion, Mr. Riley finds it desirable to have a sign that he can apply to the sides of his vehicle for special events, or community service functions. He makes his own from raw material bought from mail order houses, as follows.

Walter Drake and Sons, Drake Bldg., Colorado Springs, CO 80940-0002, (800) 525-9291, sells "magnetic register covers", which are 8- x 15-inch, white, flexible magnetic sheets. Harriet Carter, North Wales, PA, 19455, (215) 361-5151, sells similar material. For lettering, he uses vinyl letters available from most hardware stores.

Title>HK5:Understanding Decibels (dB) Without a Calculator
Author>Bartachek, Jerry L. - KD0CA
Source>QST Nov 96, p. 70
Abstract>Presents a system for remembering the relationship between power ratios and decibels.

Digest>Most amateurs are sufficiently familiar with the decibel scale to know that a ratio of 2:1 is equivalent to 3-dB., 4:1 to 6-dB., and 10:1 to 10-dB. The author expands that knowledge by memorizing the following table of approximations, useful for rough estimates:

dB.	x
10	10
9	8
8	6
7	5
6	4
5	3
4	2.5
3	2.0
2	1.5

These are approximations, useful for rough estimation. He found it easy to memorize these relations by dividing the table into three sections of 3 sets of number each. The top three ratio numbers decrease by 2 for each step; the next three by 1 each; the last three by 0.5 each.

FEEDBACK (FB)

Title>FB1:Intermod - A Modern Urban Problem", QST Aug 96
Author>DuBose, Walt - K5YFW
Source>QST Nov 96, p. 70
Abstract>Corrections for captions in the article.

Digest>The captions on Figure 5 are incorrect. The Tucker band-pass filter is at the lower right; the Par Electronics notch filter at the lower left.

The caption on Figure B of the sidebar: "A 2-Meter Notch Filter You Can Build" does not describe L1. L1 should be 8-turns of No. 18 bare wire with inside diameter of 5/16-inch (7.94-mm.); its value is 0.4-uMh.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Nov 96, pp. 51-52
Abstract>Questions and answers on topics of primary interest to newcomers to ham radio.

Digest>Questions discussed in this issue include: the number of ground radials to use with a vertical antenna; business transactions on amateur packet radio; why CW received signals are stronger than SSB; use of a counterpoise in lieu of earth ground; the ARRL web site; exchanging QSL cards by e-mail; and other subjects.

Title>NHC2:Amateur Television - Texas Style
Author>Juch, Fred - N5JXO
Source>QST Nov 96, pp. 54-55
Abstract>ATV activities in Houston include repeaters using both FM and AM; also home-building of 1.2-gHz. FM transmitters.

Digest>There is a good deal of amateur television activity in the Houston, Texas area. In this article, N5JXO describes it and makes a persuasive case that it is a very interesting and challenging subspecialty of ham radio.

Because the land in the Houston area is so flat, point-to-point UHF and microwave communications are limited to short distances. But the area that can be covered by ATV was greatly increased when repeaters were established by the Houston Amateur Television Society (HATS), with antennas on a tall building. The organization is now operating on 434-mHz. using amplitude modulation (AM), and 1255-mHz. (FM). It is also in the process of setting up a 2.4-gHz. broadcast of a TV feed from NASA Johnson Space Center during shuttle missions.

KC5AWJ, a design engineer who is a member of HATS, designed a 1.2-gHz. FM transmitter kit that many hams have built and are enjoying. Use of FM for video modulation provides much better signals from the milliwatt transmitters that the amateurs are using.

Title>NHC3:ACARS Packet for Airplanes
Author>Cox, Donald - AA3EK
Source>QST Nov 96, pp. 56-58
Abstract>Commercial airlines now use packet radio, similar to that used by hams, for a growing amount of communications between planes and the ground.

Digest>Until recently, essentially all communications between aircraft and the ground were handled by voice. Because of the traffic load, a digital packet system has come into use and is growing rapidly. It provides faster and more efficient handling all kinds of data, from flight scheduling to engine telemetering.

The packet system is similar to amateur packet, and hams can readily receive the signals. To receive them requires a receiver, the ACARS demodulator and a computer. Many ham transceivers receive the VHF aircraft-band AM frequencies. The ACARS frequencies are in the same band. Many amateur equipment dealers handle ACARS demodulators and decoders, some selling for less than $100.

Title>NHC4:Ham Families
Author>Robinson, John - W1NEB
Source>QST Nov 96, p. 59
Abstract>In this article, W1NEB advises that hams should get their spouses, children, and any other members of their families involved in amateur radio. It can be rewarding for all.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The Truth About Contesters
Author>Winter, Patty - N6BIS
Source>QST Nov 96, pp. 28-30
Abstract>Describes the World Radiosport Team Championship (WRTC) contest held in San Francisco in July, 1996.

Digest>The World Radiosport Team Championship (WRTC) is a gathering of amateurs from throughout the world who travel to one place to hold a ham radio contest. The first one was held in Seattle in 1990. In July, 1996 another was held, this time in the San Francisco Bay area.

Fifty-two hams in the area volunteered to act as hosts for teams who would use the hosts' stations in an 18-hour contest. To make the contest fair, all stations ran 100-watt transmitters with triband Yagis on 20-, 15-, and 10-meters, and a dipole on 40-meters. The FCC cooperated by issuing 52 1-by-1 call signs, using the combinations from K6A to K6Z, and from W6A through W6Z. The licenses were only good for the contest period.

People came from more than two-dozen countries throughout the world for a week of social events culminating in the contest and the final banquet. The contest began at 5:00 AM on Saturday and ended at 11:00 PM the same night. The results were handed to the judges immediately after the end of the contest. They worked through the night and the next day to score the results and to have the winning trophies engraved in time for the banquet Sunday night.

Almost all participants agreed that the main reason that they came to the WRTC96 was in order to meet the other participants. In many cases, people met in person who had been contacting each other for many years in contests, as well as in normal QSOs.

Title>GI2:The FCC Grand Island Monitoring Station
Author>Spann, Tom - WD0HBR
Source>QST Nov 96, pp. 45-48
Abstract>Describes the Nebraska station that was the FCC's primary monitoring site for 65-years, now discontinued.

Digest>In the 1920s, during the early days of commercial broadcast radio, frequency-control of transmitters was not precise. There were many cases of broadcast stations whose frequencies drifted substantially from those assigned. In those days, before the FCC came into being, the Radio Division of the Commerce Department was responsible for regulating the airwaves. They used mobile vans carrying monitoring equipment to monitor frequency and other technical performance criteria, but these were found to be unsatisfactory. Consequently in 1929, the Division built a monitoring station at Grand Island, Nebraska to monitor radio signals emitted by all services throughout the country.

The Grand Island Monitoring Station commenced its operations in 1930. It contained a primary frequency standard that was capable of measuring frequency to an accuracy of one part in a million, which was state of the art at that time. In the succeeding years, a great antenna farm was built, initially on the original 50-acre site, later expanded to 240-acres.

For 65-years, the Grand Island station served as the nation's primary monitoring site, and a considerable number of engineers, technicians, and administrators were employed there. By 1995, however, technology had advanced to the point that signals could be monitored remotely, with the results transmitted to the FCC Compliance and Information Bureau Operations Center in Columbia, Maryland. Now the old building is no longer in service and its eventual fate is unknown, at this time.

Following are digests of articles printed in the September, 1996 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. They are archived, beginning with the January, 1993 issue, and available by ftp from:

(in USA) oak.oakland.edu/pub/hamradio/arrl/infoserv/digests
(in Europe) ftp.funet.fi/pub/ham/arrl/infoserv/digests

They also can be gotten by E-Mail from the ARRL Info Server at: info@arrl.org. For detailed instructions, send an E-Mail message containing the following:

HELP
INDEX
QUIT

Another access route is via the ARRL HIRAM bulletin board. It can be accessed by a direct telephone call at any speed from 1200- to 28,800-baud. The number is: (860) 594-0306.

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy for ARRL members; $5.00 for non-members. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

Title>TA1:Heavy-Duty HF Propagation Prediction/Analysis Software -
Part 1
Author>Straw, R. Dean - N6BV
Source>QST Sep 96, pp. 28-32
Abstract>Part 1 of a two-part article. Describes four propagation
software programs, with emphasis on the operating features, not the
accuracy of predictions. Two more will be covered in Part 2.

Digest>In QST Dec 94, N6BV authored a Product Review article describing two software packages that predict radio propagation between two points on the globe, given the date and sunspot number. He classified the programs in two categories: low-cost ones, useful to "see what the bands are doing"; and "heavy-duty" programs for serious users. Accompanying the article were graphs illustrating the predictions made by the latter ones during a 1994 DX contest, plotted against the number of QSOs actually logged by an active station. They showed that the predictions were well borne out in practice.

Now, two years later, PCs have become much faster and more powerful; propagation programs have correspondingly been enhanced to take advantage of the availability of the enhanced hardware. This is the first part of a two-part article that describes several new programs, as well as an enhanced version of one of those described in the earlier article.

The discussion is limited to the operating features, not the prediction accuracy, of the programs. The author limits the discussion to programs that require a DOS-based computer containing a 386-class CPU with a math coprocessor, or better. In a sidebar, however, he describes certain programs that can run on older, less advanced computers. All plots indicate the propagation between a transmitter site and a receiving site, at a specific time of day.

The "heavy-duty" packages described are: CAPMan, version 3; PropMan; VOACAP; HFx; and SKYCOM 2.0. The first four are treated in this part, and the last two will be discussed in the second part of the article.

CAPMan, version 3.
This is an updated version of the program discussed in the 1994 article. The current version prints much more elaborate graphs, in full color. The program assumes a transmitter with 1500-watt output into a 3-element Yagi at 100-feet (30-m.) height over flat land. One type of graph plots the received signal-to-noise ration to be expected, against time-of-day over 24-hours. Three curves are plotted, representing received bandwidths of 1-Hz., 250-Hz., and 3-kHz. In addition, another curve is drawn on the same graph, but against a different scale, to show the MUF. A second graph plots received signal level in S-units and the elevation angle of the radiated signal at the transmitter end, versus time-of-day. An optional accessory program , called CAPMap, will plot a map showing a continent-size area containing predicted signal strength contour lines.

Although the CAPMan program is capable of sophisticated performance, the author found that it is very awkward to use in many respects. Nevertheless, QST will shortly use it, rather than the older IONCAP program, to plot the propagation charts that are printed in the "How's DX" column in each issue.

CAPMan 3.0 is available from Kangaroo Tabor Software, 552 Wewoka Drive, Boulder, CO 80303 for $89.95; the CAPMap accessory routine costs an additional $29.95.

PropMan.
This program was created for military use and is not particularly useful for amateur use.

VOACAP.
This is a highly sophisticated program that was developed by the Voice of America and is available, gratis, for downloading via the Internet. Versions are offered for use with either DOS- or Windows- based computers, but the performance is much more dramatic in the latter version.

The first graph it plots shows the frequency from 2- to 30-mHz. on the vertical axis versus the time-of-day on the horizontal. Colored areas are plotted indicating the received signal strengths over the frequencies and times-of-day at which propagation is possible. By moving the cursor to any point on the graph, the operator can obtain a digital display showing the exact signal level, frequency, and time represented by that spot.

The second type of graph is an area coverage map that shows the radiation angle at any one frequency and time-of-day. This remarkable plot shows colored bands representing the various radiation angles that a signal would follow to reach that point. Examples of such plots show repeating patterns of bands of the same color spaced similar distances apart; this represents the fact that to reach one point will require two hops, reflecting from the F2 layer, and further on, it will take three hops, finally four hops to cover the various distances.

VOACAP also has the distinction of allowing different antennas to be specified at both ends of the link. This intriguing program can be downloaded from the VOA web site at: http://www.voa.gov, or by gopher://gopher.voa.gov:70/11/pub/software/voa.cap. The Windows version requires more than 15-megabytes of hard disk.

Title>TA2:SWR Analyzer Tips, Tricks and Techniques
Author>Pagel, Paul - N1FB
Source>QST Sep 96, pp. 36-40
Abstract>SWR Analyzers are versatile devices and can measure many variables other than SWR. This article describes many unorthodox ways to use one.

Digest>Handheld SWR analyzers, otherwise known as antenna analyzers, such as the MFJ Model 249 and the Autek RF Analyst, Model RF-1 are highly useful devices for anyone interested in antennas. In addition to their straightforward use in measuring standing-wave ratio, users have found a number of unorthodox ways to use them for various measurements. The editors of QST solicited suggestions from readers and received quite a number, some of which are described in this article. Also included are some hints for overcoming problems that have been encountered.

W6TC reported the following:

Line Cord Isolation: When using his analyzer with an a.c. power adapter, he got erroneous readings because of the stray r.f. path to ground via the power cord. He eliminated this by using a ferrite core choke on the cord.

Balanced Load Measurements: The analyzer uses a coax connector for its input. When measuring balanced loads, the metal instrument enclosure becomes hot with r.f. and hand capacity can cause inaccurate readings. This can be corrected by connecting the antenna through a balun made of a short length of RG-174 coax wrapped on a ferrite core.

Measuring antenna resistance and bandwidth: W6TC modified his MFJ-249 by replacing one of the 50-ohm resistors in the r.f. bridge circuit with a 500-ohm pot. When the bridge is balanced in the normal way with the "Tune" knob, adjustment of the added pot should cause the indicated SWR to drop to an even lower figure. At that setting, the pot's resistance is a measure of the antenna resistance; measuring it with a d.c. ohmmeter will show its precise value. With the analyzer in that condition, one can measure the antenna's operating bandwidth by rocking the frequency control to check the upper and lower frequencies at which the SWR rises to 2:1, or whatever other number is selected to indicate the limits of bandwidth.

Finding standing-wave nodes: In operation, the analyzer excites the antenna with a signal that can be heard through a receiver. Changes in the antenna load causes audible shifts in frequency. Hence, one can touch the antenna or transmission line at various points to find the spots where touching it causes no frequency change. These are voltage minima, or nodes.

Another way to measure antenna resistance: With an analyzer and a 100-ohm resistor that can be placed either in series or in parallel with the feedpoint, the antenna resistance can be measured. First, adjust the analyzer to find the minimum SWR, then put the resistor in parallel with the load. If the indicated SWR decreases, it indicates that the load is greater than 50-ohms. In that case, connect the resistor in series, at which time the SWR should increase. Multiply the original SWR reading times 50-ohms; this indicates the antenna resistance.

If the SWR indication decreased, instead of increasing with the resistor in parallel, the load resistance is less than 50-ohms. In that case, divide 50-ohms by the original SWR reading.

Amplifier tank circuit design: W6TC had a power amplifier that was limited to bands of 3.5-mHz., and higher. He wanted to modify it for use on 160-meters, so he added vacuum relays to switch additional capacitance and inductance into the tank circuit. He started by doubling the amount of capacitance on both the input and output sides of the circuit, then added a parallel inductor made of 2-inch (51-mm.) diameter toroids with an arbitrary number of turns. With the MFJ-249 connected to the output connector of the amplifier, he adjusted the inductor turns and capacitors until he found the values that produced 1:1 SWR.

Adjusting a tetrode passive-input circuit: Using a similar "educated cut and try" procedure, he also successfully modified a linear amplifier to substitute a pair of tetrodes for the expensive triode that it had originally contained.

Checking for open-wire-line balance: When the analyzer is connected to a balanced line, touching one wire causes the SWR indicator to rise. If the line is balanced, touching the opposite wire at the same relative location will make the SWR indication to rise by the same amount. If the rise is different, the line is unbalanced.

Antenna radiation-pattern measurements: The MFJ-249 can be used as a signal source for measuring the radiation pattern of a rotary antenna. With only a short dipole attached to the output connector, the received signal should be strong enough to be measurable.

In-circuit frequency measurement of toroidal tuned circuits: It is usually not possible to measure the resonant frequency of toroidal coils with a dip meter because there is so little stray magnetic field outside the core. Using the analyzer, one can usually measure resonance with a short piece of wire connected to the output and run through the coil as a one-turn loop. Attach a 100-ohm resistor in series with the wire. The SWR meter should indicate 2:1 and should deflect upward at the resonant frequency. If this approach fails, use the analyzer and its one-turn loop as an exciting source and couple an external sensitive r.f. meter to the coil being measured through another one-turn loop. The external meter should peak as the analyzer frequency is swept through resonance.

A sensitive frequency counter: The counter in the analyzer can be used to measure the frequency of external sources. Sometimes, it is not sensitive enough to sense the r.f. energy at various checkpoints in the circuit. AG4R built a small r.f. amplifier using a Motorola MHW-591 which gives 35-dB. gain; this is usually ample.

Measuring a filter cut-off frequency: AG4R also found that he can check a filter cut-off frequency by attaching an analyzer to the input and a 50-ohm load to the output of the filter. Within the passband of the filter, the indicated SWR should be 1:1; outside the band, the SWR will rise.

MFJ-247 hints: NZ9E had a very early model MFJ-247 that does not provide continuous coverage of the HF bands. He installed an additional switch and ceramic capacitor to fill in the voids in band coverage. Also, his unit developed an intermittent problem that he found he could solve by quickly turning the power off and on, so he installed a toggle switch to make this easy. Also, since his unit does not cover the 2-meter band, he built an adapter bracket to hold it side-by-side with an MFJ-208 VHF analyzer so that he can use the counter in the 247 to measure the frequency while the 208 measures SWR.

QRP accessory pack: KB6WB wanted to use an SWR analyzer to check crystals and also to align a homebuilt QRP rig. He built, in a single

enclosure, an 8-position switchable attenuator for alignment, crystal sockets for crystal checks, and a 50-ohm pad for testing transmission lines and for using the analyzer's frequency counter to measure the transmitter frequency.

An Ethernet analyzer: AA0QX's employer has an Ethernet computer network. Shorts in the connectors or cables are difficult to find and usually require the entire network to be shut down. He found that Ethernet uses 50-ohm terminations and T-connectors for each computer to connect to the net. Sections of the cable act as 50-ohm lines, showing an SWR of 1:1 when all is well, but act as shorts or stubs when a short exists. The analyzer can be used to locate the fault by measuring the resonant frequency of the "stub".

Locating shorted connectors: N1KHB reported using his analyzer in a way similar to AA0QX's Ethernet analyzer.

An alternate power pack: WA6ODQ discovered that the life of batteries in an MFJ-249 is very short if the power is left on for any time. He replaced the six AA-cell pack with a ten-cell NiCd battery pack made of two 4-cell packs and one 2-cell pack. He connected the cells in each pack in series. Now he has rechargeable batteries with longer operating life between charges.

Determining complex impedance: K4ERO uses an Autek RM-1 which measures SWR and impedance, but not resistance and reactance. In order to make it simple to convert the SWR/impedance values to the equivalent resistance/reactance numbers, he drew up an overlay for a Smith chart. Full-size SWR/Z transparent overlays can be obtained from the ARRL Technical Department secretary, 225 Main St., Newington, CT 06111 for a price, postpaid, of $2.00 for members, or $4.00 for non-members of the League.

Title>TA3:The Micro M - A Miniature Charge Controller
Author>Bryce, Michael - WB8VGE
Source>QST Sep 96, pp. 42-43
Abstract>Construction of a tiny controller for solar cells that deliver current to QRP equipment and small storage batteries.

Digest>Many hams are using solar cells to provide the power to operate QRP rigs while backpacking, or even in fixed stations. A relatively small 5- or 10-watt solar panel can keep gelled lead-acid batteries charged up with adequate power for QRP operation.

The only additional gear required is a charge controller that prevents the solar cells from overcharging the battery when there is no load on the system, and also to prevent the battery from discharging through the solar cells when the sun is not shining. WB8VGE has designed and built a tiny controller that can fit easily into a shirt pocket.

The terminal voltage of the battery is a measure of the state of its charge. This controller monitors the voltage level, and when it drops

about 0.4-volt below the fully-charged level, if the solar cells are delivering adequate voltage, it allows the current to flow into the batteries. When the voltage climbs to a preset level, it shuts off the current.

A circuit diagram and parts list is included in the article. A complete kit of parts is available from SunLight Energy Systems, 2225 Mayflower NW, Massilon, OH 44647 for $25.00, including domestic shipping. The printed circuit board, alone, can be had for $12.00 from the same source.

PRODUCT REVIEW (PR)
Conductor: Rick Lindquist - KX4V
Asst. Technical Editor

Title>PR1:Index Laboratories New QRP+ Transceiver
Author>Newkirk, Dave - WJ1Z
Source>QST Sep 96, pp. 68-71
Abstract>Describes a tiny HF transceiver that provides SSB and CW operation on all bands from 160- to 10-meters. It provides many of the features of full-size radios.

Digest>Index Laboratories build a tiny HF transceiver that covers all bands from 160- through 10-meters with both CW and SSB modes. It provides full break-in CW with a built-in electronic keyer, RIT and XIT functions, and transmits up to 5-watts output. All of this is in a package about 4- x 6- x 6-inches (10- x 15- x 15-cm.), weighing about 5-pounds (2.3-kg.)!

The front panel contains an LCD frequency indicator, large frequency-adjust knob, volume control, S-meter, and a half-dozen other controls. The system contains 20 memories, retained by an internal lithium battery, audio AGC, and switched-capacitor audio filter.

The receiver is a single-i.f. superhet with 50-mHz. i.f. and a 6-crystal i.f. filter with 2.4-kHz. bandwidth. The local oscillator is a single-loop PLL frequency synthesizer.

The original model received by QST for their review was found to be deficient in many ways, but the manufacturer made revisions to correct each deficiency that was noted and the final version received and tested performed well. In many ways, its performance is nearly equal to popular full-sized rigs.

The manufacturer's suggested retail price for the QRP+ is $695.00.

Title>PR2:Comet CA-HV HF/VHF Mobile Antenna
Author>Lindquist, Rick - KX4V
Source>QST Sep 96, pp. 71-72
Abstract>Review of a mobile antenna designed to be visually attractive.

Can be configured to cover as many as 4-bands, 2-VHF and 2-HF.

Digest>The Comet CA-HV antenna is a visually attractive 4-band trap antenna that covers the 6- and 2-meter VHF bands as well as portions of the 40-, 15-, and 10-meter HF bands. With an optional extra coil, it can also operate on 20-meters.

The antenna is comprised of a 3-inch (76-mm.) high base coil and a 41-inch (1.04-m.) high mast. The individual band coils mount on top of the mast and each has a whip of different lengths attached above it. When the 40-meter coil and whip are installed, the total height of the antenna is about 6-feet (1.8-m.).

Two HF band coil/whip assemblies can be installed at one time with one directly in line with the mast and the other extending at right angles to it. Therefore, in one configuration, the two VHF and two HF bands can be operated.

On the lower frequency HF bands, the operating bandwidths are limited; about 40-kHz. on 40-meters, and 80 on 20-meters, but more than 275-kHz. on 15-meters and 600-kHz. on 10-meters. One can shift the center frequencies of each by trimming the length of the whip.

The reviewer found that, in operation, the antenna performed well. However, although it is rated up to 120-watts on SSB, the coils get "quite warm" with normal use. While he was running CW at 100-watts, the 20-meter coil overheated and damaged the shrink wrap surrounding it.

The reviewer summarizes by saying that the CA-HV "is a reasonable compromise in terms of cost, size and operating convenience versus bandwidth". The manufacturer's list price is $139.95; the 20-meter coil adds $36.95. The antenna requires a UHF mount such as Comet's RS-820, available at a list price of $49.95. A duplexer is also available at extra cost.

Title>PR3:MFJ-906 6-Meter Antenna Tuner
Author>Lindquist, Rick - AX4V
Source>QST Sep 96, pp. 72-73
Abstract>Description of a small, inexpensive antenna tuner designed for 6-meter operation, only.

Digest>The MFJ-906 is a small antenna tuner designed to tune almost any antenna for use on 6-meters. It is meant to allow HF operators to use the 6-meter band without the need to erect a separate antenna.

The unit is only 2.5- x 8- x 3-inches (6.4- x 20- x 7.6-cm.) and contains a pi-section tuner using quite small components. However, it is rated at 200-watts on SSB and 100-watts on FM.

Two versions are available, the Model 906 with a cross-needle SWR and wattmeter and the 903 without the meter. The manufacturer's list prices are $79.95 for the 906 and $49.95 for the 903.

Title>PR4:Sigma Tech's DX Peeper DX Packet Cluster CW Decoder
Author>Swanson, Glenn - KB1GW
Source>QST Sep 96, pp. 73-74
Abstract>Review of a stand-alone device to provide reception of a DX Packet Cluster. It requires no computer; only a VHF receiver. It reports DX spots by audible CW messages.

Digest>Almost every serious DXer (and some not so serious ones) use DX packet clusters to keep track of what DX is on the air, when, and on what frequencies. Until now, this has required continuous monitoring of a DX channel and a computer equipped with packet software to decode the information when it is received.

Now Sigma Tech has introduced a stand-alone box that connects to the audio output of a VHF receiver tuned to the Packet Cluster and announces available DX by sounding messages on Morse code through its built-in speaker. An internal memory saves the last six DX spots; they can be played back at any time. The message buffer is a "stack"; this means that, in playback, the last message received is the first sounded out. As new messages are received, they get "pushed down" on the stack and the last one on the bottom of the stack gets "pushed out", i.e. wiped out. The time of reception is also added to the DX message.

The manufacturer's list price is $189.95.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:ICOM IC-765 Mods Revisited
Author>Calvin, Duane A. - AC5AA
Source>QST Sep 96, p. 77
Abstract>Feedback for N6BV's letter in QST Dec 95 re the IC-765 transceiver modifications.

Digest>This letter represents feedback to the letter from N6BV in QST Dec 95 describing two modifications to the IC-765 transceiver. AC5AA found that his IC-765 contained a capacitor of 0.56-mF. for C300, nearly three times that in N6BV's version. He found that making the mod as recommended caused annoying pops when the rig was switched from transmit to receive during QSK CW operation. Bridging a 0.68-mF. capacitor across C300 in his rig fixed the problem.

Also, the recommended value of a padding capacitor across C280 proved to be too large. A 0.33-mF. across the existing 0.1-mF. component produces a decay time that is better for CW operation.

Title>TC2:RVS-8 Repeater Voter Audio-Amplifier IC Choice
Author>Hansen, Charles
Source>QST Sep 96, p. 77
Abstract>Feedback for WD8OYG's article in QST Apr 96 re a Repeater Voting System.

Digest>This is feedback to the article by WD8OYG in QST Apr 96: "A Microprocessor-Controlled Repeater Voting System". Mr. Hansen points out that WD8OYG's selection of an LM-324 opamp for processing the audio signals was not the best choice. It is not recommended for audio applications. The MC-34074 will do a much better job and is pin compatible.

Appended to Mr. Hansen's letter is a response from WD8OYG who fully agrees that the LM-324 was a mistake. He reports that he has changed his own equipment to use a TL-084 in place of the LM-324.

Title>TC3:More on the Surplus URM-120 Wattmeter
Author>Stein, Robert S. - W6NBI
Source>QST Sep 96, p. 77-79
Abstract>Feedback to K3BRS's letter in QST May 96 re surplus RF wattmeters.

Digest>This letter provides feedback to the letter by K3BRS in Technical Correspondence, QST May 96: "Surplus Wattmeters for Amateur HF/VHF/UHF Use". Appended to Mr. Stein's letter is a response from K3BRS. It turns out that the URM-120 designation was first used on wattmeters built under government contract as early as World War 2 and as late as 1967. The meters were built by several different companies and there are significant differences between them. Both writers agree that the meters are useful devices and that their calibration can be tested by comparison against Bird Model 43 wattmeters, with sufficient accuracy for amateur use.

Title>TC4:Null Steerer RF Amplifier Availability
Author>Michaels, Charles - W7XC
Source>QST Sep 96, p. 78
Abstract>Reports that one component in W7XC's Null Steerer (QST Jul 94) is no longer available. Recommends a substitute.

Digest>Amateurs attempting to build the Null Steerer described by W7XC in QST Jul 94 have reported that the source for the MSA-0685 MMICs recommended for the project is no longer active. The author has found that Communications Concepts Inc., 508 Millstone Drive, Beavercreek, OH 45434-5840 provides a suitable equivalent component: NAR-6, an r.f. amplifier usable at frequencies from d.c. to 2000-mHz.

Title>TC5:More on the Off-Center-Fed Dipole
Author>Wiley, W. H. - W6OWD
Source>QST Sep 96, p. 78

Abstract>Feedback to AI8H's antenna described in ANTENNA COMPENDIUM, vol. 3. Recommends a modification that provides improved performance.

Digest>In this letter, W6OWD reports his experiences in using the dipole described by AI8H in the ANTENNA COMPENDIUM, vol. 3: "How to Design Off-Center-Fed Multiband Wire Antennas Using That Invisible Transformer in the Sky". He reports that he erected the antenna and fine-tuned it to a feedpoint impedance of about 200-ohms, purely resistive. He then installed a 4:1 current transformer and found very little reactance at the target frequency. However, the antenna imbalance caused some r.f. on the coax shield. He was able to eliminate this by the method described by AI8H with two current baluns in series, one near the current transformer and the other near the shack end of the feedline, and with the shield attached to an earth ground.

Recently, he re-engineered the installation for 3.9-mHz. and found the antenna to work well, not only at that frequency, but also at the high end of the 40-meter band.

Title>TC6:More on Copper Wire Shunts
Author>Bauer, Frank - W7GW
Source>QST Sep 96, p. 78
Abstract>Feedback for K8TM's article in QST Jan 96 re copper-wire shunts for high-current DC meters. Copper's large temperature coefficient of resistance causes large errors under some circumstances.

Digest>This letter continues a discussion about problems with copper wire shunts as described in the article by K8TM in QST Jan 96: "How to Measure Large Direct Currents with Common Meters". N1AL criticized the original article because of the errors that would be caused from the temperature rise in the copper shunt causing a significant increase of resistance. In this letter, W7GW suggests the use of heavier wire would greatly reduce the problem of self-heating due to the large current. He recommends a minimum of 700-circular mils per ampere for an appropriate size wire to minimize this.

Appended to this letter is a further statement by N1AL, who points out that, regardless of the self-heating, even temperature changes in ambient temperature will cause significant errors. Because of the high temperature coefficient of resistance of copper (0.39-percent per degree C), a temperature change of only 10-degrees C (18-degrees F) will cause a change of meter reading of nearly 4-percent.

HINTS AND KINKS (HK)
Conductor: Bob Schetgen - KU7G
Asst. Technical Editor

Title>HK1:Aluminum Tubing as an Air Duct
Author>Treloar, Jack - AA0IZ

Source>QST Sep 96, p. 75
Abstract>Describes "carburetor-preheater hose" for use in building cooling air ducts in high-power electronic amplifiers.

Digest>Builders of high-power linear amplifiers often find the need to form an air duct between the tube socket and the blower to cool the tube. AA0IZ points out that auto-parts suppliers stock flexible aluminum tubing, known as "carburetor-preheater hose". It is flexible, like an accordian, and comes in a variety of diameters. He found it easy to adapt it to make a cooling duct for his 4-1000A tetrode amplifier.

Title>HK2:Self-Heating Relay Coils
Author>Lee, Mitchell - KB6FPW
Source>QST Sep 96, p. 75
Abstract>Offers a simple circuit to keep a relay warm, thus avoiding damage from condensed moisture in outdoor applications.

Digest>KB6FPW constructed a relay circuit for use outdoors in a weather-proof enclosure made of 4-inch (10.2-cm.) diameter ABS pipe with endcaps. To avoid moisture condensation inside it, he included a circuit that cause the dissipation of about 1-watt of heat in the relay coil. This creates enough heat to drive out the moisture.

His relay uses a 12-volt d.c. coil with 15-ohms resistance and requires at least 600-mA. to operate. His circuit causes a continuous current flow of only 250-ma. through the coil when it is not actuated, so does not affect the relay actuation. A circuit diagram is included.

Title>HK3:Light Your Mast for Safety
Author>Schetgen, Bob - AU7G
Source>QST Sep 96, pp. 75-76
Abstract>Discusses the need for a warning light on an amateur tower in some circumstances. Cites sources of suitable equipment and warns of regulations that must be obeyed.

Digest>KU7G has a 40-foot (12-m.) tower with a 15-foot (4.6-m.) mast on top. Recently, during the night, an emergency medical helicopter flew close over his house and landed nearby to pick up a critically ill patient. He realized that his mast extends well above the surrounding trees and is probably invisible to the pilot.

Although there are no regulations requiring a tower of that height to be lighted, he was sufficiently concerned at the possibility of a terrible accident to decide to put a warning light on top of the mast, on his own initiative. He found that regulations do exist, requiring that if a light is used, it must conform to FAA-approved specifications. These are described in: "FAA Advisory Circular 150/5345-43E: Specifications for Obstruction Lighting Equipment", available from the Department of Transportation, General Services Division, M-45, 400 7th Street SW,

Washington, DC 20590. He found that a suitable light is available from Crouse-Hinds Airport Lighting Products, 1200 Kennedy Rd., Windsor, CT 06095 for a price of approximately $62.00. For turning the lights on during hours of darkness, the same company offers an FAA-certified photocell for approximately $245.00.

The author advises that anyone wanting to install such a safety light should contact their local FAA administrative office, explain their plans, and get approval before proceeding. A plan, building permit, and inspection of the completed installation will probably be necessary.

FEEDBACK (FB)

Title>FB1:"Mathcad 6.0, A Tool for the Amateur Experimenter",
QST Apr 96
Author>Sabin, William E. - W0IYH
Source>QST Sep 96, p. 76
Abstract>In endnote 3 of the article, the e-mail address for FREESPICE Software was wrong. It should be:
http://www.paranoia.com/~filipg/HTML/FAQ/BODY/F_Freespice.html

---

Title>FB2:"A Small High-Performance CW Transceiver", QST Nov 95
Author>Campbell, R.
Source>QST Sep 96, p. 76
Abstract>Corrections to component identifications and captions.

Digest>In the photo on p. 41, the VFO transmitter board is on the right and the mini-R2 board at the left.

In figure 2, lower left corner, the "CW Offset" transistor should be a PNP 2N3906 instead of NPN 2N3904. The 2N3906 near the top of figure 2 is shown with collector and emitter reversed; the emitter should go to the plus-12-volt line. Add phasing dots at the right ends of L2a and L2b windings.

In the caption for figure 2, the L1 listing should include: "Tap at 6-turns from ground end". The L2 listing should include: "Do not twist wires prior to winding". L9 should be characterized as: "29-turns of No. 28 enamelled wire on a T-37-2 powdered-iron core".

In figure 3, the plus and minus labels for U4a and U4b inputs are reversed, though the pin numbers are correct. At U5a the plus-12-volt connection should be labeled "pin 4".

On page 44, at U6b, the plus-12-volt connection should be pin 4 and ground should be pin 11. On page 45, U6b should be labeled "U6d" and U6d should be labeled "U6a". With that change, U6d's negative input is pin 13, its positive input is pin 12, and its output is pin 14. U6a's negative input is pin 2, its positive pin 3, and its output pin 1.

NEW HAM COMPANION (NHC)

Title>NHC1:The Doctor is IN
Author>Various
Source>QST Sep 96, pp. 51-52
Abstract>Questions and answers on topics of primary interest to newcomers to amateur radio.

Digest>In this issue, the questions discussed include: the use of satellite packet for reliable messages between the US and locations in Asia and Africa; the effectiveness of on-glass 2-meter antennas; the relative ineffectiveness of "rubber duck" antennas; the effect of over-deviation in repeater operations; spurious radio emissions from personal computers; QSL bureaus; and other subjects.

Title>NHC2:Six-Meters and Beyond on Mount Greylock
Author>Ford, Steve - WB8IMY
Source>QST Sep 96, pp. 53-55
Abstract>Describes the activities of one amateur radio club's activities in connection with the ARRL June VHF QSO Party.

Digest>The Rensselaer Polytechnic Institute Amateur Radio Club set up very elaborate equipment and antennas on the top of Mount Greylock, MA for the 1996 ARRL June VHF QSO Party. The peak of the "mountain" is 3500-feet (1070-m.) above sea level and is the highest point in Massachusetts. The club has been using the site for VHF contests since the 1960s.

This year, the author visited the site and interviewed the operators before and during the contest. This is his story.

Title>NHC3:The Global Positioning System
Author>Cubbedge, Skip - N0UEI
Source>QST Sep 96
Abstract>A primer on the Global Positioning System (GPS).

Digest>The Global Positioning System (GPS) is comprised of 24 satellites that orbit the earth at an altitude of about 12,500-miles (20,000-km.) above the surface. The orbits are inclined at 55-degrees from the equator and the duration of each orbit is about 12-hours. They all transmit beacons on 1575.42-mHz.

The system was established by the U.S. Government to allow U.S. military sources to discover their precise location at any time at any place on the earth's surface. GPS receivers receive the beacons and calculate their location by measuring the propagation time from each satellite. Since the satellite orbits are extremely stable, their locations are precisely known at all times. Therefore, by timing the signal from each of any four satellites, the receiver can calculate its longitude, latitude, and elevation to a high degree of accuracy. With 24 satellites in space, at least four are always within view anywhere on

earth.

When the system was established, during the Cold War, the American military was able to use its full accuracy but others were prevented from obtaining better than 100-meter precision. Now, with the lowering of international tensions, the government will gradually make the full precision available to all, over the next ten years.

GPS receivers are now available to anyone at modest prices. They are highly useful to sailors, flyers, hikers, and even automobile drivers.

Bob Bruninga, WB4APR, developed the Automatic Packet Reporting System (APRS) which allows a suitably-equipped mobile amateur station to transmit via packet its exact location at all times. APRS to be very useful in many diverse activities, including cross-country bicycling events, sailboat races, and many others.

Title>NHC4:The Wouff-Hong and the Rettysnitch: Lost Traditions?
Author>Cebik, L. B. - W4RML
Source>QST Sep 96, pp. 59-60
Abstract>Describes time-honored traditions in the ARRL.

Digest>In the early days of the ARRL, its founder, Hiram Percy Maxim, wrote a supposedly anonymous column in QST over the signature of "The Old Man" (T.O.M.). In his column, he commented about many aspects of amateur radio, including the behavior of operators on the bands. He often decried much of the discourteous or ignorant behavior he heard. With tongue-in-cheek, he solemnly declared that the worst imaginable tortures should be called down upon many of the miscreants.

In that vein, he produced two "instruments of torture", the very sight of which would purportedly strike terror into the hearts of the guilty. One of these was the "Wouff Hong" and the other the "Rettysnitch". The former is two pieces of wood held together by a leather band and wire fasteners. The latter is a metal rod with a kind of handle at one end and a sharp point at the other, plus a circular disk with prongs mounted on the rod near the sharp end. These have been preserved on display at ARRL Headquarters ever since. This article illustrates them and tells the story.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:The High Frequency Active Auroral Research Program
Author>Kennedy, Edward J. - K3NS and Heckscher, John
Source>QST Sep 96, pp. 33-35
Abstract>Describes the apparatus that has been built in Alaska to perform studies of aurora and its effects on radio.

Digest>The title of this article, abbreviated HAARP, is the name of a research program that has been undertaken by the U.S. Government.

Although the management has been put into the hands of the Air Force and the Navy, the entire project and the information that it will produce, are to be unclassified, hence open to all.

The article contains a brief description of the facilities and apparatus that are being built to conduct extensive tests. It is located at Gakona, Alaska, which is in the eastern part of the state. An array of 48 antennas have been erected, each made of two crossed dipoles mounted horizontally atop a 60-foot (18-m.) tower. Each of the dipoles will be excited by a separate transmitter, 96 in all. The transmitters will be capable of producing 10-kW. each, so the total output of the array at full power will be 960-kW.

The experimenters are very aware that broadcasting of such massive power might cause severe interference problems. An advisory committee has been appointed, with participants from a wide variety of companies and organizations, to consult with the managers every step of the way to minimize problems. A representative of the ARRL is a member of the committee.

Title>GI2:Tales of the South Pacific
Author>Andracke, Gregory - W2HRX
Source>QST Sep 96, pp. 44-45
Abstract>A television cameraman tells his observations of World War 2 Pacific battlegrounds as they appear 50-years after the end of the war.

Digest>The author is a television cameraman who recently was sent to shoot a documentary for CBS News to be run on the 50th anniversary of the end of the Pacific War. His travels took him to many of the Pacific Island locations, the names of which are burned into the memories of those who are old enough to remember World War 2, and are probably unknown to most who are younger. Included were New Guinea, Guadalcanal, Tarawa, Kwajalein, Guam, Saipan, Iwo Jima, and many others. On his trip, he took with him a Yaesu 890 transceiver and associated equipment. Since his photos were all shot in daylight hours, he had some time during hours of darkness to operate ham radio. In this article he describes some of his experiences, and QSOs that he made.

Title>GI3:Malibu 1996 Handi-Hams Radio Camp
Author>Reinhardt, Jeff - KM6II
Source>QST Sep 96, pp. 46-48
Abstract>Describes a camp offering radio training classes for would-be hams who are handicapped.

Digest>This is a story of the Courage Center in Golden Valley, Minnesota. It is a philanthropic organization that sponsors training classes for handicapped people who want to earn or upgrade an amateur radio license. A summer class is held in northern Minnesota each year, and a winter class in Malibu, California. This article describes the 1996 summer class of 22 candidates who went to Malibu, the course that

they took, and the help that they received from all those associated with the camp.

The experience was highly pleasurable and beneficial to every one of the participants. The only unfortunate aspect was that the camp was prepared to serve 35 people. The fact that 13 "spaces" were left vacant was probably due to the fact that many handicapped persons, who would have thoroughly enjoyed participating, were not aware of the program. Anyone who knows a person who might want to participate in future courses should contact Courage Center Handi-Hams, 3915 Golden Valley Road, Golden Valley, Minnesota 55422; or else access their World Wide Web page at: http://www.MTN.org/Handiham/ or via E-Mail to: Handiham@MTN.org.

>Well, I disagree. Ham gear in real dollars is far cheaper than it was
>when I was a kid. The thousand dollar prices you reference are
>completely bogus because that is the price for new stuff. Sure, younger
>hams usually get used gear.

That's OK if you disagree, Roger. What fun would like be if we all agreed on
everything ? No, they are not completely bogus.

HF Rig (middle of the line, as I said before):

Icom 775 DSP $3899
Kenwood TS 870-S $2299

From the AES catalog. Check the price of a Ten-Tec or Alpha amplifier. No
sense of me sitting here retyping the AES price list, surely you have a catalog.

> And used gear is very cheap, just listen on the swapnets.

And in many cases, very broken. I recently contemplated the purchase of a new
radio. I was looking at the Ten Tec Omni, but it had a feature missing that I
really like. So, for the first time in my ham career I made a decision to
purchase a used one. The decision was based primary on the type of rig, and not
on the cost. The used rig was reasonably priced, not 'very cheap' ($700). On
first inspection when it arrived, it seemed it was in good condition, and
appeared to be working properly. Closer inspection showed it had been very
dropped. Very hard. And a weeks worth of using it revealed some other
inconspicuos problems. But the gentleman I bought it from is half way around
the world, and he told me that he hadn't purchased the radio new, so maybe he
was unaware of the problems. Rather than shipping it back to him and raising
hell about it, I'll just throw it in the pile with the other stuff to be fixed
'later'.

I would not recommend that any new ham buy used gear from 'the swap net'.
Maybe from a ham who lives two miles down the road, someone they know, but

NEVER from the 'swap net'. Surely, Roger, as long as you have been a ham, you know as well as I do that there are people who make a living reselling ham junk.

>It is Morse Code that deters new hams, not the price of ham gear. These
>no-code techs seem to have the dough for $500 HTs and mobile VHF rigs.
>These are more expensive than say, a used Kenwood 940, which is wildly
>better than what I used as a teenager.

Here I will disagree. I think that anyone who is REALLY interested in ham radio won't give a second thought to learning Mr. Morse's code. When I say REALLY interested, I mean someone who finds communicating via the magic of radio waves fascinating. I just don't think you will find that many people today who ARE really interested. What's fasinating about sending a packet message to someone on the other side of the world and waiting two weeks for a response (maybe) when the new ham candiates are already using email via the internet, which goes back and forth in seconds ? Computer communications technology has already far surpased ham radio communications technology. I really think a lot of the people who are screaming for HF priviledges without a code test will be very disappointed when or if they get them. They'll find out how competative HF is, and that the 'work the world with a piece of wire' theory doesn't work too well at a hundred watts. Sure, they can survive on 40 meters with a dipole up in a tree, if they live in the U.S. and want to talk to people 3 or 4 hundred miles away. Put them in the middle of a pileup on 20 meters, and they are going to be very disappointed very quickly.

I think MAYBE Mr. Morse's code is keeping a FEW people out of ham radio, those with a slight interest in radio communications, maybe some people who have used RF communications on other bands. But not those who are REALLY interested. The no code tech license has brought a lot of disinterested people into the hobby - those looking for 'personal' communications. Need to talk to Mom from the car, need to use the 440 HT when hang gliding, etc.

What is keeping young people out of ham radio is technology. Ham radio isn't high tech any more. And if you change ham radio into Carl's Digital Experimentaion Service, it isn't ham radio any more. Ham radio is just that, ham RADIO. Not ham COMPUTER, or ham INTERNET. Most kids would rather sit in front of computer than in front of a radio, surf the web instead of putting dipoles up in a tree. It was neato-keen-cool-as-a-moose to talk to somebody on the other side of the world on a radio when you and I started, but most 12 year olds already know about the WWW (World Wide Wait) and the internet, so ham radio is not awe inspiring to them, it's dumb.

I think, because of the mentality of society in the U.S. today, there will someday be a no code HF license. And it will give us the false impression that it swelled the ranks of ham radio because of the numbers of people who will run and get it. Just as the no code tech license did. But I think a vast number of people who get on HF with no real interest will become quickly disalusioned with it. Stage one, the dipole in the tree, will be fun. When they are ready to move on and find out what is involved and the cost of what is involved, stage one will be the end. Because they have no real interest to drive them any farther.

Regardless of what happens to the licensing structure, I think the HF part of ham radio will remain as we know it today. Those who are really interested and are willing and able to spend the bucks will continue to do what those who are there today are doing.

Your turn to disagree, Roger. And Grandpa Lennys turn to whip me some more with his Microsoft Bookshelf CD ROM.

>Contrary to popular belief I do not use the BEEPER as a derogatory
>comment.

You have to consider the feelings of those to whom you direct it, Eric. Let's say, for example, that you lived somewhere in the south, like Biloxi, Mississippi. And someone came along and addressed you as a 'bare foot stump jumping redneck hill billy'. They might not have intended to be derogatory, maybe they'd call ANYBODY in Mississippi a 'bare foot stump jumping red neck hill billy'. But you might be offended by it.

You have to remember why you are here. You are here to convince anyone and everyone whom you can convince that you and other people should be allowed to get onto the HF ham bands without a code test. Calling other hams that use Morse code 'beepers' won't help your cause. Drop by Deja Vu and study the case of Squiggy, The Freedom Fighter. You will quickly see that he turned more people against no code HF than anything that has happened here in a long time.

I will pay a $40 finders fee (on the radios that I actually
acquire) to the persons who find each of the WW-II era
AN/ARC-5 equipments, factory original and unmodified,
shown below:

Transmitters: T-15 T-16 T-89 T-90
Any factory-original transmitter for below 2.1 Mhz and
above 9Mhz other then the T-23 or T-126, and any factory
original crystal control HF.

Receivers: RAT RAT-1 RAV
Any receiver factory original for above 9 Mhz
other then the R-28, and any factory original
crystal control HF.

Accessories: TN-6 loading coil unit.

I will consider modified units and pay a variable fee on
a case-by-case basis. Also seeking RAT, RAV accessories,
mounts, dynamotors, control boxes etc.
I reserve the right to reject any or all offers and to
negotiate finders fees for items other then those listed.

yeah, that makes sense. Ask non-smokers if they prefer Marlboro
or Camel. I'm sure you'll get an accurate picture then.

>In this case, the general non-ham public must be included because the
>radio spectrum is a public resource.

The average citizen thinks amateur radio is "CB". Every non radio
literate person who has ever gotten into my truck asks "is that
a CB radio?" I simply answer "yes" because they are normally pointing
to the 2 meter radio.

>As such the public must be
>included so as to know what percentage of the public might be
>interested in becomming radio amateurs if the code reqirement is
>deleted for access to HF.

Question: "Would you be interested in becoming an amateur radio
operator if the requirement for a morse code test were eliminated."

Yeah, I'm sure asking people with a General-class ticket or above
wouldn't skew the results.

What's the point of asking someone if they would become an
amateur if they already are?

If you want to find out who would become an amateur if the code
requirement were dropped, wouldn't you ask >that< segment of the
population, not amateurs?

Your logic makes no sense.

==========

Subject: Re: Standard C568A - TX Mod
From: Larry Smith <Larry@g4oxy.demon.co.uk>

STANDARD C568 TX MOD
Open the radio with care. Remove the four screws at the back of the radio and remove the back remove 2 screws from the front of the metal plate at the bottom of the unit and open the front panel. Be careful not to pull the ribbon connectors. The logic board is on the back of the key pad.

There locate VR281 and VR265 above is a copper screen. Remove the sub board located over the screen by gently pulling downwards. You then will have to lift back the copper screen lifting from the left side.

Follow a line up from directly in between the two VRs approx 5mm above mounted horizontaly is a 47k chip resistor . Remove it. Reassemble and do a full reset. TX will now be activated wide band.

Due to the extreme miniturisation the job is not easy. You will need an iron with a very small tip (battery powered) a good magnifying glass and 3 hands. I take no responsibility for this mod. Do it at your own risk. However it worked fine on mine.

Larry G4OXY

The absolute BEST Ham Exam Programs I found were those by
PRACTICAL-ly Software. DOS and Windows versions available, too!
There is no "sound" capability for a blind user, though...but you
might find these programs' test printing capability useful if
you have an OCR-to-speech system set up. BEST OF LUCK TO YOU -
we hope to see you announce your new Callsign here in 1997!

-Novice/Technician Class Manager
-General Class Manager
-Advanced Class Manager
-Extra Class Manager

A FEW FEATURES:
-Simple, intuitive system for preparing for Ham License Exams
-Perfect tool for Volunteer Examiners for creating tests
-Manages entire question pool
-Begin reviewing at any question
-Review questions sequentially or randomly
-Shuffle answers for each question if desired
-Take a test from randomly chosen questions (within the guidelines
of the FCC testing criteria)
-Full set of options for customizing tests, including a Test Design
Screen
-Print complete tests with printer-resolution graphics, along with
answer sheets and score key
-Save tests to disk for later use
-Study assist screen tells you what areas you need to study after
taking a test
-Pop-up on-screen calculator
-Automatically "remove" a question from the "question card deck"
when answered correctly, if desired
-Manually remove any question from the "deck" at any time
-Reinsert into the "deck" any previously removed question
-Start review all over by putting all "cards" back into the deck
-Show answers always or only after an attempt at the answer has
been made
-Saves all program settings so you can "pick up where you left off"
-Print any part of the question pool with printer-resolution graphics,
or just print a sheet showing all the graphics

They're popular downloads from my BBS (see below)...in the HAM EXAM
File Area!

notes at the end of this article).

Jan 26 (Sun) - Villa Park, IL - Wheaton Community Radio
Amateurs Mid Winter Hamfest - '97 at the Odeum Exposition
Center 1033 N. Villa Ave., Villa Park, IL. Doors open at
08:00 till 14:00

FEBRUARY 1997

Feb 2 (Sun), Wheaton, IL - Giant Computer show, DuPage |
County Fairgrounds. County Farm & Manchester Rds., Wheaton, |
IL. See notes at the end of this article. |

Feb 16 (Sun), Orland Park, IL - Giant Computer show, Orland |
Park Civic Center. See notes at the end of this article. |

Feb 16 (Sun), Rock Island, IL - Davenport ARC. Contact Don
Schneider, WD0AMA, (310)-388-0108. email
dschneir@saunix.sau.edu

Feb 23 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

MARCH 1997 |

Mar 2 (Sun), Wheaton, IL - Giant Computer show, DuPage | County Fairgrounds. County Farm & Manchester Rds., Wheaton, | IL. See notes at the end of this article.

Mar 9 (Sun), Orland Park, IL - Giant Computer show, Orland | Park Civic Center. See notes at the end of this article. |

Mar 9 (Sun) - Waukesha, WI. SEWFARS Swapfest. Waukesha County EXPO Center, Waukesha, WI 8:00 AM Talk-in on 146.820 pl 127.3 $4.00/$5.00 Ham Radio. Computers. Electronics. Amateur License Exams. For information Contact SEWFARS, PO Box 102, Delafield, WI 53018. 414-650-0724

March 23 (Sun): Grayslake, IL - LAMARS hamfest, Lake County fairgrounds. Admission $5 at gate, free parking. Setup at 6 AM, doors open at 8 AM. VEC testing. For Information contact LAMARSFEST, 650 Green Bay RD, Lake Bluff, IL 60044.

APRIL 1997

Apr 19 (Sat), Wheaton, IL - Giant Computer show, DuPage | County Fairgrounds. County Farm & Manchester Rds., Wheaton, | IL. See notes at the end of this article. |

Apr 20 (Sun), Orland Park, IL - Giant Computer show, Orland | Park Civic Center. See notes at the end of this article. |

Apr 27 (Sun), Arthur, IL - Moultrie ARK. Contact Ralph Zancha, WC9V, tel (217)873-5287.

MAY 1997

May 3 (Sat), Cedarburg, WI - Ozaukee Radio Club Swapfest, 8:00 AM. Circle B Recreation Center, Intersection of HY 60 and Ozaukee Cty I. Talk-in on 146.37/97 and 146.52 $4.00 Amateur License exams. Amateur Radio. Computers. For Information Contact O.R.C. Swapfest Committee, W58 N985 Essex Dr, Cedarburg, WI 53012-1439 or call Gabe at 414-377-2784 between 6:00 and 8:00 PM.

May 18 (Sun), Orland Park, IL - Giant Computer show, Orland | Park Civic Center. See notes at the end of this article. |

JUNE 1997

Jun 1 (Sun), Princeton, IL. Bureau County Fairgrounds. Free parking. Info: Debbie Burton, N9DRU, 1153 Union St., Marseilles, IL 61341-1710, tel. 815-795-2201 Usually an excellent hamfest, with sellers from Illinois, Iowa, and Wisconsin.

Jun 8 (Sun) Six Meter Club of Chicago. Talk-in on 146.97 MHz (107.2 PL) or 146.52 MHz. Contact Joe Gutwein, WA9IRJ, (630)963-4922.

Jun 8 (Sun), Orland Park, IL - Giant Computer show, Orland | Park Civic Center. See notes at the end of this article. |

Jun 22 (Sun), Wheaton, IL - Giant Computer show, DuPage | County Fairgrounds. County Farm & Manchester Rds., Wheaton, | IL. See notes at the end of this article. |

JULY 1997

Jul 26 (Sat), Pecatonica, IL - Rockford Amateur Radio Assoc. (RARA) Amateur Radio and Computer Hamfest. Winnebago County Fairgrounds, about 15 minutes west of Rockford, Il. Talk in on 146.61 MHz, 114.8 Hz PL. This will be in the main exhibition hall with room for tables. Ham Radio Vendors, Computer parts vendors, tailgating, food. Code receiving contest, Throw the Radio contest, Great door prizes. For table reservations contact Mike Anderson at (815)397-4304 or mander5@ix3.ix.netcom.com. For any other information contact Marsha Plasters at (815) 399-9233 or wa9ffl@aol.com.

AUGUST 1997

Aug 16 (Sat), Franklin, WI - 7:00 AM, C.A.R.S. Crystal Ridge Ski Lodge. Talk-in on 442.200+ pl 100.0 / 146.52 simplex $4.00/$5.00 Radios. Computers. Electronics. Concessions. Door Prizes. Free parking. Free camping. Large Tailgate selling area. Electricity available, $1.00. Contact C.A.R.S., PO Box 325, Franksville, WI, 53126-0325. 414-325-7427

Ben.

How 'old' of an oldtimer do need to be? I think somebody's pulling your leg.
The way you attempt a 1:1 is by pruning and matching the feedpoint.

Jim W9LZ

5321. 69 Standard Reasons To Kill The Code

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-30 00:00:00 UTC
From: kh2d@kuentos.guam.net
Message-ID: <5a8mmg$ciq@lehi.kuentos.guam.net>
Source record: 208649
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

69 Standard Reasons To Kill The Code, All of Which I Learned on Internet.
Please read this list slowly. Reading it too quickly may cause dizzyness.

1. Morse code is old.
2. Morse code is obsolete.
3. Morse code is antiquated.
4. The Coast Guard doesn't use it any more.
5. It keeps millions of qualified EE's out of ham radio.
6. Most qualified people are too busy to learn Morse code.
7. Squiggy doesn't like it.
8. It makes Squiggy vomit.
9. It makes Squiggy curse.
10. Spew doesn't like it.
11. It makes Spew post to the CB newsgroup.
12. It makes Spew get more internet accounts.
13. It isn't hi tek.
14. Most people only wanna TALK on HF.
15. Grandpa Lenny doesn't like it.
16. It makes Grandpa Lennys Microsoft Bookshelf CD ROM vomit.
17. It is not an effective LID filter.
18. It is not an effective KID filter.
19. It is not an effective SPACE CADET filter.
20. It is not an effective FREAK filter.
21. It is not an effective JERK filter.
22. It is not an effective WIERDO filter.
23. It is not an effective means of communications.
24. It is not as fast as a T1 line.
25. Nobody saves lives with Morse code anymore.
26. Nobody can copy Morse code below the noise floor.
27. It makes Squiggies wetware dry up.
28. Frequency Grease doesn't work on CW antennas.
29. Retirees use CW.
30. Beepers use CW.
31. Olde Farthz use CW.
32. Nocoder's can't tell which repeater they are on cuz of CW iders.
33. Morse code is killing ham radio.
34. Morse code put AEA out of business.
35. No code HF'ers wil vote for tuffer written tests.
36. If we let nocoders on HF, they'll learn code 'later'.
37. Morse code is dead.
38. Old hams are trying to keep HF for themselves.
39. Extra class hams only took the extra test to piss off nocoders.
40. Some people 'just can't learn it'.

41. The FCC has no right to make rules.
42. The government has no right to make rules.
43. The ITU has no right to make rules.
44. The ITU and the FCC have no right to make regulations.
43. MARS doesn't use it anymore.
45. Jupiter and Venus don't use it anymore.
46. The ARMY doesn't use it anymore.
47. The NAVY doesn't use it anymore.
48. The MARINES don't use it anymore.
49. Squiggy doesn't use it anymore.
50. There is no technical advantage to Morse code.
51. No code General Class hams don't like it.
52. No code Advanced Class hams don't like it.
53. No code Extra Class hams don't like it.
54. Bill doesn't like it.
55. Bill never did use it.
56. The ARRL shouldn't make us use it.
57. The FCC shouldn't make us use it.
58. Squiggy HATES beepers.
59. Squiggy's wife hates beepers.
60. Squiggy's dog hates beepers.
61. Squiggy's gold fish hates beepers.
62. Squiggy's friends hate beepers.
63. It shouldn't be jambed down our throats.
64. Grandpa Lenny needs a new hobby.
65. HF is a 'boys club' for Olde Farthz.
66. Eric thinks it's 'silly'.
67. It makes Jerry tell procoders to 'kiss his ass'.
68. It's 'just not fair'.
69. Ham radio will END if we don't let nocode people on HF.

73, Jim KH2D

NEWSFLASH! FREQUENCY GREASE RECALL!

I just read over in rec.alt.radio.amateur.cb.swl.lowfer.spy.microwave that the venerable product FREQUENCY GREASE has been recalled and pulled from store shelves.

It seems that when applied to a Stoned Wheat Thin cracker with a three-hole wire recorder strecher in quantities between 7 and 12 furlongs per fortnight, that it caused cancer in Canadian laboratory rats!

Well the general concensus here is that we need to keep CW in case Dr. strangelove drops the bomb. Then we can all run out and scrounge parts from the debris, whilst fighting off mutant cockroaches, to build a simple CW transmitter with which to communicate.
I would much rather have someone capable of fixing the EMP damaged equiptment and use packet to pass traffic. Therefore the stringent written test, with emphasis on electronic theroy and such, is much more viable than the Morse Code requirment.
Then again, someone with a ray gun would be nice to have to fight of those mutant roaches who keep beeping :)

Hi Mike, back in the dark ages, W5OLV (SK) had a copy of that list
of two-digit codes. I have no idea what happened to it. I got a QSL
card from a YL who scratched out 73 and wrote in 88. I went and asked
Shorty what it meant and he pulled out a list of two-digit numbers
and showed it to me. I can't remember any of the other numbers.

Good comeback

>
> >If you knew that speeds were limited on HF (as it is HF that will
> >affected by the removal of the code requirement), why ever mention it in
> >the first place, other than to troll for flames.

> Speeds are limited on HF only because the FCC says so.

Gee..seems like a good enuf reason to most. Probably also limited to
things like propogation, data copmpression..you know things that really
don't matter to someone who thinks HF is for sissies anyway.

> >The 2nd statement..loved it..the military and others. A big SO WHAT.
> >We are not the military, they can do things we've can only dream and as
> >pointed out, the other must mean commercial communications interests.
> >HMMMM CARL'S AGENDA, the commercialization of the ARS..play for pay. As
> >pointed out, to allow some of the previously mentioned datamodes would
> >require the change from Amateur to Professional radio service.

> Seeing as how I have no interest in commercial communications you
> above statement is merely percieved as a troll for flames.

You advocate major increases in dataspeed. Carl advocates increases in
dataspeed. Carl foresees people using Amateur bands with T1 lines
surfing the internet. Something that can only be done if the rules are
changed to allow commercial access on the amateur bands

As stated before, when it comes to trolling for flames, you seem to be
the up and coming expert.

> >We are the AMATEUR RADIO SERVICE. we are not the military, we are not
> >AT&T, MicroSoft, etc etc. Remember it, learn it, love it

> I do.
> Nope I guess hams never invented anything the military ever used.
> Nope. Hams were never innovators of technology or the forerunners of
> the electronic art. Nope.

Actually if you read Len's posting, as others, you find that the ARS is primarily a user of existing technologies, AM, FM, SSB, CW. I can see the military using try amateur inovations.. SSTV, packet..you know the true speed demons of communications. Len's posts can be read on dejanews. I suggest you spend some quality time there.

BTW, why is it that you need HF access when you continually type that HF is for sissies??

Next time research before typing. It helps others reading your posts that you actually have something interesting to say

OK. I'll buy that. I made the effort to learn theory (the hard part for me).
But you don't want to make the effort to learn code (the hard part for you).

So I guess what you are saying is that I should have gotten Bill to write a
letter to the ITU and ask them to ban theory testing instead of making the
effort to learn it so I could pass the test ?

Makes sense to me. Beep Beep.

I doubt indorsements will work for two reasons. One, the FCC isn't interested in keeping track of who has what, and two, there is no one to police them. They would basically amount to an honor system. A CW indorsement isn't very constructive anyway, as it doesn't allow people to get on the CW bands and practice operating, which is the best way to increase code proficientcy. A better idea, I think, would be a no code HF license that allows operation in certain band segments as the current licenses do.

Subject: MFJ-989 antenna tuner comments review
Date: Tue, 31 Dec 1996 10:10:49 +0200
From: Morel Grunberg <morel.grunberg@telrad.co.il>

Hello,

One week ago I posted a request asking for opinions on MFJ-989
antenna tuner. Until now I received 116 answers as follows:

* 92 of the answers were totally unfavorable
* 11 of the answers were quite neutral
* 9 answers compared the MFJ-989 with other similar tuners ,
8 of them clearly preffering the others brands.
* 4 answers were positive with no specific reasons.

The most frequent reasons for lack of satisfaction were:

* roller inductor quality (49 reporting melted elements)
* roller inductors turning mechanism failures (18 reports)
* roller inductor tuning bad feeling (15 reports)
* poor roller turns counter (21 reports)
* poor cabinet mechanics, assembly, finish and paint
(21 reports)
* lack of enough coax positions on antenna switch
(12 reports)
* bad performance on certain types of antennas (whips, long
wires and zeppelins) - 19 reports ; in 12 cases the tuner was
set-up on fire.
* poor operation manual (9 reports)
* poor design (small cabinet size affecting the inductor Q) -
3 reports
* poor performance on 160m short antennas (!!) - 4 reports

The most frequent reported reasons for buying the MFJ-989
were:

* low price (7 reports)
* high number of features vs. low price(7 reports)
* relatively small size (5 reports)
* built-in dummy load (4 reports)

The other reports reffered to: Vectronics 1500, Nye Viking,
Ameritron 1500, Heathkit SA-2500, B&W, J.W.Millen and
Nevada. The most favorable opinions were on NYE-Viking
(10 reports).

I would like to thank to all who find time to answer .

Happy New Year,

Morel, 4X1AD

5364. 75 meters useless

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: james o'brien <kd4cdb@bellsouth.net>
Message-ID: <32C9B444.6DE4@bellsouth.net>
Source record: 208242
Body handling: Binary attachment payload not displayed: ASS.WAV

I would like to make a point about 75 the way it exists currently on the east coast. For all practical purposes it is useless. People who play tapes,make noises, and don't identify make a decent ragchew impossible. Who do we have to blame this sitiuation? Well I'll tell you what,I've only been a general for about a year and here is what I have seen. Hoardes of cliquish,drunken,old people with no social skills who make any type of friendly and helpfull qso impossible. These are the ones who are responsible for the mess on 75. And guess what? They are the ones who scream the loudest if they are even marginally interfered with. Maybe instead of telling the new ham "Hit the road you @#$%^&*()*%%$#" they had told him about the group on frequency,good antennas to build,etc. they might not have this problem. But,just like the rest of the country,they want to pass the buck. It's the commission's fault,or the leagues fault. It could NEVER be THEIR fault! This duality manifests itself on frequency too. If they call you every name in the book and tell you to leave "THEIR" frequency,you have no recourse whether you were in qso,or just identified,but to leave. You can't tell them off,they will call that qrm. But if they crush you with 5,000 watts during your qso, they will have a big laugh. If you stand up to these radio bullies enough, and decide to tell them what you think of them,then they label you a qrm'er. They try to categorize you with all the intentional jammers. In other words, they can pretty much do whatever they want and you are at their whim. But I and many others did'nt buy their equipment so some antique with no social graces and an illegal amplifier can tell him to turn it off.
Surprisingly, alot of new hams have done just that,and with every individual that they run off,in their twisted minds they think they are more invincible,free to ruin the hobby for everybody else. Well I don't buy it, and I'm not giving up. If you stand up to these jerks long enough,then they revert to a well known tactic that everyone knows. They outright threaten you. And that is the reality check,because when you go to these hamfests,if you are lucky enough to even find one of these clowns,they either so obese and old they are no threat at all,or they are handicapped. Or 5' tall! But that is rare because these lids never wear call badges and rarely go to hamfests. Would you if you had been harassing and offending people for twenty years?
I would now like to point some of these individuals by call and frequency: 3853-virtually the entire frequency. Drunken profanity and completely unliscensed operation commonplace. was threatened by a jerk in Waco,Ga. and found out later he was over 70!(N4RKL) He's usually threatnening somebody! 3894.5-God help us! (WB2OTK) dodged his 10,000 nal and now spends all his freetime qrm'ing (K4OKA) and (WA4FQF). Believe it or not this is where I go when I'm on 75;once I realised I was going to get qrm'ed anyway. This conflict draws hams from all over 75, most

disguising their voice and adding to the problem. Then they go back to their own frequency and complain about it! Unreal. All this would stop if WB2OTK would put an end to it,but he won't. 3898:Always a lot of kidding on this one,used to be tongue in cheek and humourous. After Chief passed and AE4N got sick this one turned really nasty. (N4MRF),(WQ4E), and (KM4GZ) are the bad elements here. I've enclosed a wav file of this bunch in action. For some reason they like to go into a little homosexuality routine alot.If the wav makes it by the censor,check it out.I have recorded,logged, and forwarded all three of these guys making threats to various amateurs. KM4GZ is a policeman, which itself is pretty appalling. Every Monday night they have a swap shop on this frequency,used to be the best in the country,but now it is incessantly jammed. It's a shame because Bill,KJ8I, is one of the politest hams on 75 and does'nt deserve it. I have listed gear there before without a problem. And guess who's raising the most cain about the inteference:you got it,the three stooges listed previously.Another good op here is KJ4CQ, he trys to help out newcomers and is very diplomatic. These two stand out amongst the slime. 3878:How did I skip this one! This frequency is usually okay as long as one dirtball is not there: KO4DS. Although greasy Wally's call is listed here in Georgia,he is hiding out in Alabama. (That in itself is a rule violation for the nitpickers)This guy is a total jerk,was supposed to jump me at several fests,went to them all,never saw him. He was off the air for a few months and I checked in regular, met alot of nice hams here.There are several good ones here, but KO4DS calls the shots and if he decides you should'nt be there,(which he does to alot of people),they will all back him up. Especially KO4ZB,a little 5' New Yorker with a serious inferiority complex. Little Tony will threaten as long as Wally will back him up. This jerk lives in my hometown and I've given him directions here,but he never showed up. Another law-enforcement clown. He's fun to have around though, just keep a crate handy for him to stand on! 3901: What can I say,this frequency has spawned most of the qrm'ers on the band. Especially Elmer Fudd, who qrm's the traders net and runs here to tell KF2OQ about it. Most of the trash on this frequency are WB2OTK's underlings, and they love to emulate him by playing noises and tapes and generally creating hate and discontent. They qrm most evenings all over the band and then come to this frequency to talk about it and laugh.Alot of two's here and they like to make four's miserable. Some of the fours have earned a hard time,but playing music doesn't make much of a point. Discussion would be a better route,but we've covered that already. 3915:One of the best freqs on 75. The older hams here are helpful,polite, and knowledgeble. 3927:A good group here also. KJ4CQ,K4DPK, and several others keep this slot in line.Lots of ribbing, but nothing hateful here. Even some of the lids already mentioned act right here,which proves at one time they knew how. 3950: Liberty net, good freq to listen on,have a jillion watts if you want to transmit. 3975:Georgia net is open, then K1MAN starts his legal jamming at about 00z.

In summary, I don't want my generalizations to offend. I have met many old hams who have helped me in ham radio. These calls do not represent their age groups or liscense classes very well at all. I am 35,a General

class, and don't understand how a handfull of lids have been allowed to completely trash a band. I have also enjoyed all the other bands in the year I've been a General. I obtained my liscense in 1991. My message? 1.Don't let these radio terrorists push you around. Stand up to them and exercise your rights as a fellow amateur. Don't jam them, thats illegal. But do tell them what you think,as long as you id every 10 minutes your legal. 2. If your a ham on these freqs I've named,try to be a leader and not a follower. If you hear somebody getting treated badly and you don't like it,tell him. Some of these freqs would straighten out if the guy s there would run THEM off.A little of their own medicine might help.We are supposed to be self-policing are'nt we? That's about it, I'm open to any rational comments to curb this mess. Happy New Year to all but the lids. KD4CDB

Drew -

Do you copy code? If not, why do you not listen when those with experience tell you that it's a good thing, and a lot of fun, and has gotten through in bad S/N when voice couldn't (which has helped a lot of people)? Why has it been maintained in the law for so long? Are all who have gone before you idiots?

What possible good would it accomplish to strike the code requirement? Remember what happened with CB - what would really be the difference?

And regardless of the code question, why do you post like white trash? Surely consideration for others in your writing will not detract from your ideas.

Howard.

5366. Long Delayed Echo mysteries...

Newsgroup: rec.radio.amateur.misc

Long Delayed Echo mysteries...

Hi,
I'm doing some research for a documentary about anomalies. One of the subjects I'm interested in is that of LDE's. I have done some reading on the subject and noted a few experiments - however, I'm looking for new information & experiences which may help to throw more light on the matter.

Of especial interest is the geographic "preferences" of LDEs. I noted for example that some evidence pointed to LDEs being more prevalent in the Polar regions. Do LDE's have any other preferences? Also, I'm interested in the various characteristics of the LDEs. I noted some saying that it tends to occur when "opening up" a frequency.

If you have had any experiences, or know of further literature or people I can consult - I would very much appreciate it.

I have posted this in several newsgroups since I wasn't quite sure which is the best place to go, so if this is out of place - I apologise.

If you can help in any way, kindly reply by e-mail. Thanks.

Cheers, Jan...

Yes! I've heard of it. The cap on the can is marked in units of SWR,
and there's an arrow on the can itself. Before spraying, you turn the
cap to the desired reduction or increase in SWR. Then, just pop the cap
off and start spraying.

.....sorry, couldn't resist.

Joe

Take five minutes to read this and it WILL change your life.

If you want to make big bucks ($50000+) without any effords, read this article and follow the instructions!

By investing just $5, you can and WILL get thousands of dollars by the mail.

It's REALLY SIMPLE to do!!!!

STEP 1.

Invest your $5 by writing your name and address on five seperate pieces of paper along with the words: "PLEASE ADD ME TO YOUR MAILING LIST."
(In this way, you're not just sending a dollar to someone; you're payingfor a legitimate service.) Fold a $1 bill inside each paper, and mail them by standard U. S. Mail to the following five addresses:

1-Sam Coice
25550 Buckthorn Ridge Rd
Pioneer Ca 95666

2-Peg Vickmore
14905 Highway 88
Jackson, Ca 95642

3-Brian Hyson
4278 Sayoko Cr
San Jose, Ca, 95136-2335 USA

4-Andres Camacho
Rua Apodi 78
Sao Paulo, SP, 05052-010 Brazil

5-Mariano Peinado
Apdo Correos 291
03730 Javea - Alicante -
Spain

STEP 2.

Now remove the top name from the list, and move the other names up. This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to "at least" 250 newsgroups. Rembering that
the more that you post on, the more people see it, and
the more you will get. There are at least 30,000 newsgroups
at any given moment in time so don't be stingy.

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the Internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 250 posts I made, I got back about 5
responses. Yes, thats right,only 5. You make $5.00 in cash,
not checks or money orders, but real cash with your name at
#5.

Each additional person who sent you $1.00 now also makes 250
additional postings with your name at #4, 1000 postings. On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 250 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 250 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 250 postings each with your name at
#1 and you get a return of $60,000 before your name drops off
the list.And that's only if everyone down the line makes only 250
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

The end result depends on you. You must follow through
and repost this article everywhere you can think of.
The more postings you make, the more cash ends up in
your mailbox. It's too easy and too cheap to pass
up!!!

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it. Print this out
right now so you can refer back to this article easily. Try to
keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

If you're really not sure or still think this can't be
for real, then don't do it. But please print this article and pass
it along to someone you know who really needs the bucks, and see
what happens.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE BUCKS!
GOOD LUCK TO ALL, AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

*** By the way, if you try to deceive people by posting the messages
with your name in the list and not sending the bucks to the people
already included, you will not get much. I know someone who did this
and only got about $150 (and that's after two months). Then he sent
the 5 bills, people added him to their lists, and in 4-5 weeks he had
over $10,000!

TRY IT AND YOU'LL BE HAPPY!!! :o) !!!!!!!!!!

5369. Newbie Questions - NEED HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: gwatson@npgx.com.au
Message-ID: <5a9t5l$dpk@zonk.geko.net.au>

Cross-posted to: rec.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.cb

Hi!

I recently set up my great grandfathers old HF Reciever (its REAL old), it's a TRIO MODEL 9R-59DS. Probably no-ones ever heard of it :). It picks up frequencies from 550khz to 30mhz. I have been listening to all those ham radio operaters and CBers and I decided I want to join in. But Since I don't really know any Ham Radio Operators in my area.. I don't know who to ask for help.. so I posted here. By the way I live in Penrith NSW Australia (if there are any hams around there that might be able to help e-mail me). I beleive that I need some sort of license to be allowed to legally transmit. Here are the questions I need some answers for...

1) Do I need a license to transmit to CB and/or Amateur radio bands? In Australia that is.

2) If so, who do I contact to get this license, and what must I know to get the license? Also.. how much does it cost?

3) How strict are the authorities on people who don't get a license, like, could I get away without having a license?

Thanks for any help you may provide. ANother question, when buying a tranciever that says it can transmit to the frequencies, eg - 1.8mhz to 30mhz does that mean you can set the frequency? Because over here in Australia the cordless phones frequencies are about 29.XXXX so could I transmit to them.. hehe fun :).

This is real important to me, because I don't want to go thru the hasle of learning morse code or something if I don't need to. If I can get away with just buying a tranceiver and using it to talk to people without any sort of license I would be very happy, but if not.. oh well.

Thanks again in advance!

5370. DPL (and CTCSS)

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: westecft@pacbell.net
Message-ID: <32cd8462.8929596@news.pacbell.net>
Source record: 208248

I know what CTCSS and DPL are, and more-or-less how they work.

Can anyone point me in the direction of specifications that
are detailed enough to permit an implementation?
For example, on CTCSS, how close to the nominal frequency must
a transmitted tone be to be considered "good tone". And how far away
must it be to be considered "bad tone". Is it a percentage? Is there
a "dead band" or unspecified zone? On DPL, I understand that it is
FSK between two low-frequency tones. What are the tones , and the
accuracies required? What are the repeated sequences?
I'm hoping that someone knows of some specification squirreled
away somewhere on the net... But I haven't been able to find it.

Thanks

This sounds like a touch lamp. They contain an oscillator at about
200KHz (in your case, it looks like 204KHz); when you touch the
control plate, you detune the oscillator. Another circuit detects the
change in amplitude of the 200KHz and changes the brightness level.

Unfortunately, they usually don't bother to filter the rectified power
line before applying it to the oscillator. This means the oscillator
is modulated by 60Hz square waves. The 200KHz usually isn't all that
pure either, so it generates its own harmonics throughout the
spectrum. Of course, all this junk is connected directly to the power
line, so it has an excellent antenna.

The best fix is to buy the d**ned thing, remove the electronics, and
convert it to a regular lamp<g>. Radio Shack choke cores on the power
cord might help, though they aren't all that effective at 200KHz.

I'm glad you at least note the "minor" aspect. More to the case is
that it is a total non-issue these days. Folks just aren't going
to instantly build their own CW rig for that emergency.

>The need for learning CW is especially true, given that the government
>is phasing out its use. Not very long from now, only other hams will be
>able to understand emergency messages sent by CW.

But no one is sending emergency messages in CW, so who
needs to be listening for CW.

>Maybe the test should just be modified. Since, using my reasoning, CW is
>essentially an emergency backup, last resort kind of thing, maybe speed
>is less important, and they just need to test for accuracy in
>distinguishing letters and symbols at 3-5 WPM (similar to some
>aerobeacons).

That's at least reasonable and would be consistent with
a previous proposal I've made as follows:

Is there a compromise in the CW debate?

First, any compromise must recognize the concerns of both sides and
attempt to bring them together. Step one is acknowledging that there
is a middle ground. In the CW debate, the middle ground most
frequently mentioned seems to be that even if CW is less relevant
today, there should not be any elimination of CW testing, unless there
is an increase in difficulty for the theory elements. What I propose
here may not be a perfect answer, but it does seem to address both
concerns.

Current test requirements for General and Extra require the passage of a CW test at 13 wpm and 20 wpm respectfully along with a separate theory test. In both cases the CW test is a stand alone, pass (70% correct) fail requirement. But what if we offered test takers the opportunity to take the test elements as they do today OR, as an option, we let them take the 13 wpm or 20 wpm CW test as an integral part of the respective General or Extra theory (i.e. written) test?

How would that be accomplished?
During any VE session, if a test taker completed the CW test with a passing score of 70%, they would be granted an CSCE and then take the theory test as before. However, if they failed the CW test, they would be permitted to merge the CW test results from that day's test with their theory results also taken on that day only. If they still failed to pass the theory test using a merged score, no CSCE would be issued for either part of the testing.

The actual scoring would be done as follows:
The General theory test is 25 questions and one must answer 19 questions correctly to pass. The 13 wpm CW test is 10 questions and one must get 7 answers correct to pass that test element. If we combine the two tests (for a total of 35 questions) and if the test taker scores a total of 26 answers correctly, then he or she passes, regardless of the individual number of incorrect answers on the CW test.

While I haven't shown the numbers, the same scoring process could be applied to the 40 question Extra class test.

Doing this would retain the same overall test methods (only the scoring process would change), no additional record keeping should be required nor would any CSCE be issued for anything that isn't issued today. More importantly, an immediate benefit of this approach is that if someone chooses to not pursue the 13 or 20 wpm level of CW, they MUST get a greater percentage of the Theory element correct in order to obtain an overall passing score. That automatically raises the difficulty level of the theory test for those people that might wish to ignore learning CW at those speeds, which is something many have desired to see happen if any change is made regarding a lowering or elimination of CW requirements.

Worst case scenario for someone taking the General test who didn't attempt to learn any CW beyond 5 WPM: Even if they just filled in answer B for all 10 CW questions, they might luck out and get 3 of the CW questions correct anyway. That being the case, they'd then need to correctly answer 23 of 25 theory questions (92%) to have a total of 26 correct answers to pass the test on a combined score basis.

In summary, I think this suggestion meets the concerns of many hams because:
1. It retains all existing levels of CW testing,
2. It maintains full compliance with International treaties,

3. It makes no changes to the test elements themselves,
4. It improves the theory difficulty for people that ignored CW,
5. It would be an easy to implement process if approved by the FCC and
6. It provides a middle ground solution for an ever increasing area of internal debate among hams.

Note, I have not suggested merging the 5 wpm test at this time because that minimal level of CW testing must be retained for compliance with international treaty. If, in the future, the international requirement goes away, then merging the 5 wpm testing might also be considered.

Where do some people come up with these far fetched reasons ?

There is a 2 ywar grace period for renewing a lapsed license and still
retain the callsign. The FCC must leave the callsign untouched if it is
to be reclaimed.

>Mike Kelly wrote:
>> I am beginning to troubleshoot a serious 60-Hz noise problem I have here at

I sent Mike a private email reply suggesting he check for a new touch lamp in his neighborhood; these devices have caused this kind of problem in the past.

This morning, I received a reply that Mike had just installed such a lamp in his own home; unplugging it immediately cleared the QRN.

Luckily, it was Mike's own lamp. These things can cover a lot of ground; neighbors' lamps are capable of damaging (or destroying) your reception.

The clue is the frequency sensitivity. If QRN peaks are evenly spaced at (very!) roughly 200KHz intervals, it likely is a touch lamp.

Source record: 208270

Those young folks that got licensed in the 20s became the retirees in the 60s, and those young hams that got licensed in the 50s are today's retirees. Roger says he hears more retirees on the air today than back in the late 60s and blames that on the code requirement, yet he fails to realize how the amateur population has grown; how many young hams received their license in the 20s as compared to those young pups receiving a license in the 50s? The numbers probably differ by a factor of 10.

Agree with all of the above. But why should CW be a REQUIRED testing element when none of the other emissions are required? We don't test for proper digipeter operating procedures (though we probably should), so why Morse?

5384. Icom 706 information requested

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: TVSJR@SPRYNET.COM
Message-ID: <32c8bc0a.5888269@news.sprynet.com>
Source record: 208275
Cross-posted to: rec.radio.shortwave,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.equipment

I just bought an Icom 706. I have seen the "yellow-wire" mod,
and I have also seen the removal of capacitors in the VHF high-band
filter to improve the receiver sensitivity in the VHF high-band,
outside of the 2 meter filter. Which mod works better to improve the
coverage between 148 and 170 mHz? I am not interested in transmit
capability in this range, but I would like to use the 706's
capabilities to receive some of the local government in my area.
Any information and experiences regarding modifications to the
706 that you can share will be greatly appreciated.

Please respond via e-mail (TVSJR@SPRYNET.COM), due to an increasing
load on the news server on my ISP.

Thanks in advance!!

So now I'm curious.... Why are folks abandoning 2x1 callsigns in favor of 1x2's? I've noticed a number of individuals doing this. I noticed one change a while back where some guy was vacating what looked like an older vanity 1x2 callsign (with his initials) for a newer 1x2 with some unrecognizable connection. What's the "desirability hierarchy" of these shorter calls?

Are smokers polled on non-smoking matters. They sure are. 20-20 even did an in-depth report on polling about three -- maybe four years ago. The reason: the polling service noted that smokers and non smokers both share the same air and the same constitutional guarantees. Both had the right to voice an opinion and each would be a valid point of view.

In ham radio issues, I again point out that the electromanetic spectrum does NOT belong to us hams. We only are given access to a limited amount of it by the good graces of the FCC and US government.

Rather, the electromagnetic spectrum exists under PICON -- the public interest, convienience and necessity. In other words, we are there because the public lets us be there.

It matters not how they view us; as CBers or even as cell-fone owners. It matters only that under PICON that the public be given its voice on any and all matters regarding the electromagnetic spectrum.

Good question. I'd venture to assume that there are people who feel
Morse should be a requirement
to access certain portions of HF to comply with the international
treaty. Or perhaps to carry on a quasi salute to those radio pioneers
who helped conveive Amateur Radio.

Personally? I like CW, havn't used it since May 3, 1990, but I like it
and I learned it.

I too HIGHLY reccoment Code Quick. I got my extra after
giving up on the code. What I mean is...I had tried all the code
tapes available and none of them seemed appealing to me.
I finally said to myself, "If this is what it takes to learn
the code....screw it."
Then a friend told me about Code Quick. He kind of
demonstrated it to me. I saw some hope and got it.
WOW !!! Boy was I surprised. I had no problem learning the
code...furthermore....getting the 20 wpm !!
I challenge anyone to get code quick and try NOT TO LEARN the
code after listening to it. Code is taught in such a way that one can
not forget it. Comes second nature.
Well anyway...enough of the testimony. I hope that someone
reads this and gets code quick....and passes the code. Unfortunately
code is still a requirement so "you gotta learn it " if you want to
experience more frequency coverage.

Japan also openly violates the hunting of whales in international waters, but that's irrelevant to the topic at hand.

But let's say the ITU drops the code requirement. What then? You'd still have to prove that morse code requirement is unconstitutional. The FCC is an entity of the Federal government and, as such, only have to answer to a lawsuit in a federal court. Your argument would fall flat on its face. You'd have to prove that a morse code requirement violates the U.S. Constitution. That would be pretty hard to do. There have been a few grass roots political groups that have tried to sue the FCC for violation of the First Amendment because of certain words you're not allowed to say over the airwaves. They have had no success. If the FCC can be allowed to blatently violate the constitution, what makes you think someone would have success in filing suit to drop the morse code requirement.

All I can say is good luck to whoever does it. They're certainly goiing to need it. (Along with a lot of cash to pay the lawyers fees.)

The following is a QST

The American Radio Relay League says that the Morse code requirement must stay! Also, a scientific study links electromagnetic fields to Alzheimers disease and the launch of the Phase 3D ham satellite is again delayed. These stories and more on our year end Newsline report number 1011 coming your way right now.

(*****

ALL SAYS "YES" TO MORSE CODE

The American Radio Relay League says that the Morse code must stay. A special committee created by the ARRL to study issues relating to the 1999

World Radiocommunication Conference has recommended that the ARRL Board of Directors not support changing the treaty requirement for Morse code testing to operate below 30 MHZ. The committee submitted its final report to the leagues Board last week.

The Committee's findings could wind up playing an important role in whether the U.S. recommends keeping Morse code as a requirement for amateur radio license privileges below 30 MHz. The U.S. will make its recommendation during the World Radio Conference '99. At the same time, other countries are already on record as wanting the Morse Code requirement removed.

According to surveys conducted by a special ARRL Committee, U.S. radio amateurs want to keep the code. The Committee counted responses from about 10,000 League members answering the survey in QST magazine. A second survey, this one targeted at about 2,000 amateurs was also conducted. Tod Olson, K0TO, is the League's Dakota Division Director and Survey Committee Chairman:

"We compared the results of the 2 surveys to see how well they matched and this gave us a fix on what members thought and what amateurs at large thought." Tod Olson

Olson says the results of both surveys matched closely. Among League members, 62% say keep the code, while 30% say drop it. Olson says the surveys covered hams in all license classes, including VHF only users. It was that category of hams, Olson says, that yielded an amazing result:

"I'll call them the people that entered ham radio via no-code. Still, more than a tiny amount, approximately half felt that we should retain the CW qualification exam." Tod Olson

David Sumner, K1ZZ, is Executive Vice-President of the ARRL:

"The fact that the recommendation is consistent with members views on the subject shouldn't be a surprise to anybody." Dave Sumner

With just three years left in a century filled with amazing technological advances, Olson says it's clear that hams still feel strongly about keeping Morse Code, even though other radio services have abandoned code as a practical means of communications.

"There's a feeling that if you're really intense on being a player in the hobby that going through the test of can you learn the letters for the code; can you manage to read Morse at 5 words per minute sort of signifies that you are willing to sacrifice a lot. That you are willing to put up with a lot in order to become an amateur and go places from there. There is less of a clear feeling about how fast you ought to be able to copy code." Tod Olson

Some hams want to keep the code to preserve what they see as the integrity of the amateur radio service. But in the eyes of CQ Magazine Editor Allan Dorhoffer, K2EEK, that's not a valid argument:

"I got my license in '53 and there's nothing around today that really resembles what was going on in 1953. So what do we mean by integrity?" Alan Dorhoffer

The Committee's recommendation next goes before the League's Board of Directors in January.

Among those amateurs surveyed, Olson says there were only slight differences in opinions about Morse Code among League and non-League members. (ARRL release and other sources)

(*****

ARRL SUPPORTS PROPOSAL ON RECIPROCAL OPERATING

The ARRL also says that its time to make it simpler for hams to operate worldwide and its asking the FCC to act. In comments filed in response to a commission proposal to ease restrictions for visiting foreign hams to operate in the United States, the ARRL said it "heartily supports" the plan.

Earlier this year, the FCC proposed amending its rules to make it easier for hams holding a European Conference of Postal and Telecommunications Administrations -- or CEPT radio amateur license -- or an International Amateur Radio Permit from certain countries in the Americas to operate during short visits to the U.S. If approved, hams would be able to operate for short periods in participating countries without first obtaining another license or permit from the host country. This arrangement would make it easier for United States licensed radio amateurs to operate stations temporarily in several countries in Europe, Central and South America.

But the ARRL has also suggested some changes to the FCC proposal. The principal one recommended involves the length of time foreign holders would be allowed to operate in the U.S. The FCC had proposed extending operating authority for up to 180 days within the preceding five years. The League says that this limitation unnecessarily restrictive. It suggests that such reciprocal licenses be valid for use by the holder for a period up to one year. This, from the date of arrival in the United States but not beyond the expiration date of the ham license issued by the visitor's home country. (Via ARRL)

(*****

RF EXPOSURE DELAY

The FCC has postponed the date for hams to comply with the new RF exposure regulations from January 1, 1997, to January 1, 1998. FCC Report No. DC 96-112 announced the amendment of the rules to extend the transition period for licensees to determine compliance with the new bioeffects requirements for RF transmitters. The announcement was made just before the close of business on Christmas eve. (Via FCC)

(*****

ALZHEIMERS TIED TO EMC EXPOSURE

Exposure to electromagnetic fields has been tied to Alzheimers disease. Researchers at the University of Southern California say Alzheimer's disease is sharply higher among people with high exposure to electromagnetic fields.

The results of the new study were released on December 19th. It says that people whose jobs place them in close proximity to equipment that contain electrical motors are at the greatest risk. This includes professions that use sewing machines and other power tools.

But not everyone agrees with the results of the USC study. A spokesman at the National Institute on Aging says the results are too preliminary to draw any solid conclusions. He says the study has to be reproduced in other groups to prove its validity.

Also, this report follows the release last October one by the National Academy of Sciences that took the opposite view. That report concluded there was no convincing evidence of a link between residential electromagnetic fields and diseases such as cancer. (Via listener submission)

(*****

WT8W NEW GREAT LAKES VICE DIRECTOR

Dave Coons, WT8W is the new ARRL Great Lakes Vice Director. ARRL President Rod Stafford, KB6ZV, has appointed the New Carlisle, Ohio, ham to replace John Thernes, W4ZN, who recently resigned to devote full time to graduate studies.

Coons, 65, is a former US Postal Service employee and served for 12 years as postmaster in Miamisburg, Ohio, before retiring in 1989. He is active in all aspects of ham radio and devotes much of his spare time to working with the Handi Hams. (Via ARRL)

(*****

PHASE 3D DELAYED

The launch of the Phase 3D ham satellite is again being delayed. The European Space Agency has announced a launch delay for Ariane 502. That's the booster will carry Phase 3D to orbit.

According to AMSAT North America Executive Vice President Keith Baker, KB1SF, the launch has been pushed back to early July. Baker says that this is a double edge sword for the Phase 3D program:

"There's two reasons I think its good for the program. Number 1, is that its, it tells us that our friends at the European Space Agency are doing everything they can to ensure that the rocket is ready to go. And number 2, is that gives us a little more time to check out and make sure things are working properly. Do the final, final checks and so forth. So, I think on balance, from the overall program stand point, I think it is

good for the reasons that we mentioned. On the other hand, obviously there is a lot of people that would very much like to have another high altitude satellite in orbit." Keith Baker

An ESA release echoes Bakers words. It says that the change resulted from the recent establishment of a detailed timetable that's now required before a launch. Because of this the 502 launch sequence won't begin until Wednesday, April 9th, 1997. The launch itself is planned for early July. (Via AMSAT-NA and Arianspace)

(*****

EBS TO BECOME EAS

The Emergency Broadcast System or EBS will soon give way to the Emergency Activation System or EAS. This, as away of using telecommunications to alert the public to an emergency.

The current EBS was instituted under President Kennedy in 1963. This was a year after the Cuban missile crisis and its original intent was to allow the president to address the nation on a moment's notice in an emergency. Currently, stations put a test pattern or tone on the air and then announce a test is under way. An eight second one kilohertz tone signal follows. Finally, the audience is told that in the event of an actual emergency they would be given Civil Defense instructions.

The current EBS relies on a daisy chain notification system, where one station receives the warning and then sends it on to the next station. That means if one station's equipment fails, others may not get the warning. The new Emergency Activation System depends more heavily on an approach similar to the world wide web. In the new system no station relies on just one source to receive the broadcast warnings. Rather, digitally encoded signals will activate computers at radio and TV stations and download emergency warnings. (Via listener submission)

A CHILE HACKER

A computer hacker has broken into the Internet site of the Chile's recent Ibero-American summit of leaders from Latin America, Spain and Portugal and filled it with pornographic pictures. The hacker reportedly linked photos of nudes to a list of activities planned for the first ladies at the summit. The World Wide Web page was promptly shut down.

Chilean government officials had inaugurated the Web pages a few months ago as a show of Chile's technological progress. The summit was attended by twenty one heads of state. (Via Usenet)

MAXIM MEMORIAL AWARD NOMINATIONS OPEN

The nominating period is now open for the leagues' annual Hiram Percy Maxim Memorial Award. Each year, this award is given presented to a licensed radio amateur under age 21 whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities.

In keeping with the tradition of the award when it was first established in 1936, formal nominations are made by section managers. Supporting information, including the endorsement of ARRL-affiliated clubs and elected or appointed League leadership officials, should be submitted with the nomination. An award panel will review the nominations received and select the winner. The prize is a cash award of $1000, a suitably engraved plaque, and travel and accommodation expenses to enable the winner to attend an ARRL convention for a formal award presentation.

Nominations must be sent to your section manager who is listed in the front of QST Magazine. (Via ARRL)

HOFFMAN ORDERED TO PAY FINE

Timothy Harold Hoffman of Phoenix, Arizona has received a Christmas present that he probably did not want. It came in the form of a letter from the FCC upholding a $6000 fine it issued against him for playing like a ham without first getting a license.

Regular listeners will probably remember Tim Hoffman. He is the alleged repeater jammer who was caught by the FCC's Douglass, Arizona Field Engineers working with hams from the Arizona Repeater Associations Interference Committee. He was issued a Notice of Apparent Liability to Monetary Forfeiture after being nailed for willful violation of the Communications Act of 1934 and the Commission's rules."

According to the FCC, the infractions resulted from Hoffman's operation of a radio transmitter on amateur radio service frequencies without a valid license, his failure to allow inspection of the radio station by authorized FCC personnel, his committing acts of willful and malicious interference to radio communications of licensed Amateur Radio stations, and operation on CB channel 36 to transmit one-way communications and material to amuse or

entertain.

Hoffman had admitted his guilt and was issued the monetary forfeiture notice. He wrote back to the FCC asking that the amount be lowered. The FCC has responded by saying that the fine stands and it gave him thirty days in which to pay. At airtime its unknown if Hoffman plans any further appeal. (Via FCC)

HAMS KILLED IN PLANE CRASH

Two hams have been killed in the crash of a private plane. On Monday, December 16th, Chuck Kahn, W2PVX was on final approach into Long Island Mc Arthur Airport. With him was Ron Katz, WB2DVK. According to Andrew Feldman, WB2FXN, the plane went down one mile short of the runway and crashed into a heavily wooded area of the Connetquot State Forrest. The two men were believed killed on impact.

Kahn was the president of the firm that employed Katz. Both men were returning from a business trip to Georgia when the crash occurred. The cause of the accident is under investigation by the National Transportation Safety Board and the FAA. (Via WB2FXN)

(*****

STOLEN RIG LISTING

If someone steals your radio, e-mail the details of the theft to Mark Saunders, KJ7BS. Mark offers a free service to help hams whose gear has been lost or stolen. Check out his lost or stolen ham gear listing on his Internet home page at

http://www.dancris.com/~tracker/tracker.html

(Via KJ7BS)

(*****

REPEATER CONTROLLER INFO

Repeater owners listen up. Rich Colwell, WA3QKX tells Newsline that he has established two list servers on the world wide web dedicated to repeater controller hardware and software. One is for the still very popular ACC Controller while the other covers Link Communications controllers.

Joining the ACC Controller List Server (Repeater Controllers) go to URL:

http://rrc2@engrng.pitt.edu/~rrc2/acc.html

Joining the Link Communication List Controller (Repeater Controllers) go to URL:

http://rrc2@engrng.pitt.edu/~rrc2/link.html

DX

In DX, the Radio Society of Great Britain reports that GM0MUV, is currently active as VP8CME from Antarctica. This, as part of Sir Ranulph Fiennes's cross Antarctic solo walk expedition.

GM0MUV is Morag Howell. She is the Antarctic base leader for Fiennes' expedition, which is being done to raise money for breast cancer research in Great Britain. She has been reported on 14.270 MHZ looking for European stations on Wednesdays and Sundays between 16:00 and 18:00 UTC. (Via RSGB, ARRL)

(*****

PIRATE PREACHER

Finally, the FCC wants to take an unlicenced religious broadcaster off the air but he is refusing to turn his transmitter off. The FCC says that he faces stiff penalties if he does not comply.

The Rev. Rick Strawcutter is minister in Adrian, Michigan who not only has a church, but a radio station as well. That's not unusual in this day and age except that Rev. Strawcutters' station has never been granted FCC authorize to operate.

The federal government is trying to force Rev. Strawcutter to get a license or shut down his transmitter, but he has refused to do either. Instead, Rev. Strawcutter cites a 1995 Federal Court Decision in Northern California that blocked the FCC from shutting down Radio Free Berkeley which is operated by Stephen Dunnifer. In that case an appeals court held that current FCC regulations governing who does and who does not require a license to broadcast are ambiguous. Also that they tend to favor wealthy corporate interests.

The FCC is appealing that decision, but in the meantime Radio Free Berkeley remains on the air. Now, other unlicenced broadcasters like Rick Strawcutter are taking to the air using the Dunnifer decision as case precedent.

According to recent news reports, Rev. Strawcutters' station runs only 95 watts on 97.7 MHZ transmitting his brand of religious message. But the FCC says it has received complaints from residents and other radio stations. In response, the FCC has warned Rev. Strawcutter to immediately shut down his station or risks a $10,000 fine, confiscation of his equipment and possibly stiffer penalties. (Via Usenet)

5397. Macintosh Computers and Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: john@wd1v.mv.com
Message-ID: <john-3112960734560001@wd1v.mv.com>
Source record: 208288

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with approximately 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

Or connect to our home page via the WWW http://www.mv.com/ipusers/wd1v

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

The latest Macnet Roster is here as a compressed "attached" file if you are just joining Macnet or if you have just sent in an update to your stats.

Each Macnet Roster entry is in Zip Code order for USA and alphabetical order by country name for DX. You can download later versions from my home page whenever the mood strikes you.

Starting on January 1, 1997, we offer a Macnet Moderated Mailing List.
To send a message to all Macnet members on the Internet, send your message to

john@wd1v.mv.com

with "Macnet Dist." on the subject line along with your actual subject title.

Your email address will appear in the message so if you are posing a question to our group, anyone might respond directly to you or answers can be sent to me and then shared with all of us.

To be removed from the mailing list, type "Remove" on the subject title.
Only Macnet Roster entries may subscribe.

A trip to my home page reveals there are many good files and programs for amateur radio operators that want to use Mac computers. More details are in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/
but some of our features include:

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Roster - a virtual "Who's Who" HyperCard stack with more than 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and their passions and put a design on your Mac Radio future when you see what neat things are being done!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lot of links to great Mac FTP sites for radio, electronic engineering, and similar data.

Source record: 208290

I have been useing this stuff for years. In fact I had the same problem with it running down the coax, and soaking the ground.

It did kill all the grass, my xyl was not happy about that. The good news is that after a bad storm this summer that broke the feedline on my antenna, I found out that just haveing the coax lying on the ground, worked better than haveing it conected to the antenna. A 1:1 SWR and gain you could not beleive. I think this was due to all this stuff that soaked into the ground.

73's and would like to hear from anyone else that has worked with underground antennas. We almost have ours compleated!

If as much effort was put into helping new hams, and learning code, as this message thread, we would have a lot more younger hams.

This is silly The code has been there for ever, and everyone knew that when they got into this. No one is required to upgrade any more. I guess the next thinkg they will want to do is do away with a drivers licence test to drive a car or a school bus.

Grow up a little here people!

>at a different QTH

What would you like to me explain ? Radio propagation, why lady's in Australia are on 11 meters, or why your radio works the same when somebody elses pushes the PTT switch ?

>I could go on with dozens of other similar QSO's like the one with
>Vienna or the guy down in Panama I used to talk to every morning on my
>way into work but I hate to be a braggard.

I suggest you wouldn't brag about, at least not here. I'm not sure if the rule is still in effect, but the last time I heard you weren't allowed to talk to anyone on 11 meters more than 150 miles away, and if that is still the case, it would make you a criminal, not a braggard.

>Problem with HF is that ya always here wise old hams say "The band is
>dead" when they really should be saying"I am too lazy to spin the dial
>and listen for more than five minutes"

O. IC. Maybe thats why I am sitting here CQing on 160 and two guys in the states I am talking to on the packet cluster are sitting there listening for me.

>And yes i would like to have HF in my arsenal. That does not make me
>an HF sissie. An HF sissie is like the wise old ham described above in
>my last paragraph.

O. OK. All the old hams, who passed the test and are already on HF are sissies, but you aren't. But you couldn't be an 'HF sissy'. You don't have a license to be one yet, right ? When you get on HF, will you be a sissy too ?

There was an interesting article on calls, their histor and "hierachy"
in a 1994 QST.

This is VERY subjective, but:

o 1x2 preferred to 2x1
o W prefix preferred to K
o K prefix preferred to N
o 1x3 preferred to 2x2

All this relates to when that type of call was first issued, I suspect.
W calls were first, then K then N. 1x2's came before 2x1's. 1x3's came
before 2x2's, etc.

Let me say that this was the gist of the article in a 1994 QST.

Phil

> when they got into this. No one is required to upgrade any more

Actually, there are some who are posting and discussing this in reasonable terms for what they see as legitimate reasons. I personally welcome them and their opinions to this discussion. There are a few others who mistakenly believe that heaping contempt and insult on those who disagree with their views is the best thing they could be doing "for the cause." I do not think they are being effective at all.

I try to ignore those who are offering single-word summaries of this comlex issue (beeper vs whiner) and listen to the more reasoned presentations. Don't paint it all with one brush -- there are enough people who are being reasonable to keep the discussion somewhat productive.

Also remember, that some buro's, like the W2, require a separate envelope credit account for each callsign. In some cases, an operator could have 2 or more active incoming buro callsigns, each requiring some a subscription.

I've been a Ham for almost 25 years---haven't used CW in this decade and never got faster than 15-16 WPM. BUT, I support the code requirement for one reason. We value what we have to work to get. One reason that the CB bands are chaoic was that the license was given away. Ham licenses have to be earned. Most people won't trash something they had to work to get.

I don't use peanut butter because it attracts squirrels. Otherwise, it
does work, but don't use the chunky variety. And I highly recommend Jif
if you are going to go this route.

This is true. In fact, when I received my general in (I think it was) early 1967, general class hams had full privileges. Incentive licensing rolled in, and we generals lost almost half of our HF privileges. Personally, I reacted by upgrading to Extra. No skin off my butt.

However, this is my lifelong hobby, and I want it to be here for those who come after. It frightens me to see our lack of numbers, and the greying of our ranks. I'm 42 myself, no spring chicken. And yet, almost everyone I QSO with on HF is ten or more years older than me. This is in sharp contrast to VHF, where the median age seems to be much closer to that of the general public, with a respectable sprinkling of teens and young adults. Based on this observation, and from speaking with these folks, I have concluded that the CW requirement is what is keeping most of them from upgrading. The Morse requirement seems to be viewed as a make-work, pointless requirement that just isn't worthwhile. Many of these folks, never having experienced HF, don't realize that from a pragmatic standpoint the requirement is a minor inconvenience in return for what you get. This is not good for our hobby, that these folks bypass HF. HF is still the best part of ham radio to many of us, because of its greater potential for communication in real-time.

Accordingly, I strongly believe that the CW requirement must go. It has been abandoned pretty much by every service but ours. We hams use it only recreationally; it is not used in MARS or in normal ham disaster communications. Let's keep it as part of the hobby, but not as a required part.

Lack of numbers in a democracy inevitably leads to a lessening of political clout, with all that implies in terms of frequency allocation retention, RFI regulation, etc. Additionally, the hobby is a lot less fun when there aren't as many chaps to QSO with up on HF. Let's open it up! Keep a good filter in the form of good meaningful reg and theory exams. Keep incentive licensing if we must. These should be adequate to filter the wannabe CBers out of our hobby.

The way I heard it the landline telegraphers used standard two-digit
codes to condense common words and phrases, and 73 was the code for the
"sincerely yours" or "regards" placed just before the sender's name on
a message.

> 73,
> Stan KF0NC
> "90% of all statistics are made up"
> <beep>

Actually Clint, I did look it up. went to www.autism-society.org and
found the following. And frankly, it looks a lot more like the way I
used it than any 'preoccupation with fantasy...'
here it is:

What is Autism? Autism is a developmental disability that typically
appears during the first three years of life. The
result of a neurological disorder that affects functioning of the brain,
autism and its associated behaviors occur in
approximately 15 of every 10,000 individuals.

Autism is four times more prevalent in boys than girls and knows no racial, ethnic or social boundaries. Family income, lifestyle and educational levels do not affect the chance of autism's occurrence.

Autism interferes with the normal development of the brain in the areas of reasoning, social interaction and communication skills. Children and adults with autism typically have deficiencies in verbal and non-verbal communication, social interactions and leisure or play activities. The disorder makes it hard for them to communicate with others and relate to the outside world. They may exhibit repeated body movements (hand flapping, rocking), unusual responses to people or attachments to objects and resist any changes in routines. In some cases, aggressive and/or self-injurious behavior may be present.
---end of quote---
So I guess I really did use it as intended huh? eg when I used autistic in regard to KC5WCP and some others attitude/abilities with Morse Code. Beepers beep, whiners whine (but they can't beep).

It could also be "CW ease and intelligibility." For example, I can easily
see someone with a callsign like N 5 S H wanting to get something a
little less problematic if they did a lot of CW operating.

> ARRL Local Gov't Liaison, Mt. Olive Township, NJ

I agree...more thought is required on this subject. IMO, there should be a small sliver of the *phone* segment allocated for those with a CW endorsement. Although on the face of it, this is somewhat illogical, it may accomplish two important goals:

1) it may be an acceptable compromise for the "I did it, so you need to do it too if you want the same privileges" crowd.

2) if the no coders are correct, it will lead to an influx of new people, which is necessary if this hobby is to survive.

Okay, people, weigh in on the pros and cons of this trial balloon. This assumes, of course, that international agreements would allow it. My own feeling is that there may be some incremental growth by reducing or eliminating the CW requirement, but in the scheme of things, the hobby has other fundamental problems which are more significant than this CW red herring. Ham radio is simply less relevent in the communication age, and lack of attention and revitalization has allowed it to deteriorate.

Some letters are difficult to figure out, particularly over a
band limited channel like HF SSB (typically 300 to 2.4 kHz).
I often have trouble telling the difference between and "S"
and an "F," unless phonetics are used. With CW, some letters
are troublesome--lots of people would confuse the "H" in my old
call with S and 5.

This is particularly a problem if you like to work QRP or low
power. I find it a fun challenge to work other QRP stations.

The G-QRP club offers an award for working 10 DXCC countries
2-way QRP--I've toyed with the idea of trying to work DXCC 2-way...
but I only have a couple dozen so far... maybe with the new call...

Well Roger I agree most people are retired on the HF bands and have
the time to learn code, but I think it takes more time to learn the
theory than the code. You can use 30 minutes a day for 2 weeks and
learn enough for the 13 wpm. It does not take a smart or a unoccupied
person to learn enough to get 7 out of 10 questions right.

If all our efforts are to be directed solely for the benefit of self, we are purely individual and able to take about as much form as the individual sands of the sea. We are an incoherent, uncontrolled crowd. On the other hand, if just a little of our efforts is devoted to the common cause, we automatically establish organization and efficiency and protection, and everything else that is elevating, improving and worth the having... When an amateur asks that old-time question, "What do I get out of joining the ARRL?" the answer should be, "Protection." He cannot have it unless somebody joins as organization and does the work. Unless he joins and does his bit, he must not complain when his fellows place him in the list of unenviables who are not willing to do any work themselves..."

Taken from an editorial by Hiram Percy Maxim, in the November 1919 issue of QST (77 years ago!!)

Drew believes that the ITU will strike down the code requirement at the next WRC - he says many (?) countries such as Japan currently ignore said requirement.

Well Drew, check out US47CFR Part 15 and look at all the freq'ys below 30 MHz you can transmit on without passing *any* code requirement at all. The best known code-free band is 1750m; another is 11m.

So you see Drew, just like Japan, we also grant restricted code-free access to freq'ys below 30 MHz.

Some will scream "But that's not amateur radio!" and my response to them is that "amateur" was originally defined as someone who owns and operates a station for pleasure (see Radio Communication Laws Of The US, 1912).

See you on the bands tonight for Straight Key Night!

Actually I wanted NE5E but it was taken, so I settled on N5IN and I like
it, but then I am strictly a CW man!

Check out http://www.tapr.org for info on amateur SS.

TAPR is really doing some great stuff with the recently
issued STA, allowing more experimenter-friendly use of
amateur SS.

I am currently running two 115 kbaud FH SS modems
on 900 MHz. These are made by FreeWave. TAPR
is using "custom" versions of these as part of their studies.

There IS amateur radio SS activity out there. But you'd
never know it based on all the code/nocode/license wars
typical of this newsgroup.

From a past issue of Morsum Magnificat

(http://www.morsum.co.uk)

Author unkown to me:

"Morse Therapy

Many times, over the years, I've finished writing a lecture late at night. The house is asleep, but my mind is wide awake. I know that if I go to bed now, I'll just lie awake and the ideas I have to propound in the morning will rush madly about, echoing and muttering in my brain. My solution has always been to fire up the TS-520, limber up the Brown Brothers paddle, put on the cans and exchange CW for a while with someone on 20 metres.

After a while the Morse begins to decode itself automatically. My pulse-rate slows, and the network theorems and Fourier transforms of my professional life go away. I have almost become one with the radio, a bionic post-processor tacked on the end of the audio chain.

CW is the purest form of communication I know, a 'mind-to-mind' linkage. The words appear right inside my head, words that were never spoken; uncorrupted by accents, verbal peculiarities, oddities of vocal intonation. They leave no room for other thoughts. Almost like a form of meditation. Very therapeutic. After thirty minutes of that, my metabolism has been slowed right down and I'm relaxed. I can go to bed and sleep comes.

All of us who have been hams for a long time go through phases. That's one of the nice things about our hobby, there are so many outlets for our nuttiness. I've been an antenna nut, a Dx hunter, a transmatch experimenter, a keyer builder, a phasing SSB enthusiast, a CW keyboard freak.

All these phases have passed, but my first love is still CW. Its the mode I go back to whenever I need to wind down and recharge the batteries. There's something about the essential simplicity and purity of Morse that, for me, all the other modes lack."

Not my words, but certainly reflects my amateur radio experience! I usually "copy" CW using the computer

keyboard, copying to the Notepad of Win 95. However,
after awhile, it seems easier just to watch the words
forming in my mind, as the above author has stated.
That IS very relaxing, and quite simple after one follows
the proper CW learning methods, e.g., the Koch method,
and listening to CW daily, for a half-hour or so at a time
at speeds, say 5 wpm faster than you can comfortably
copy with a pencil or keyboard. In a few weeks or months,
there they are, the words in your minds eye!

Anyway, Happy New Year to All and may this be the
year you realize whatever your dreams may be!!

73, Jim, KH7M

I agree with you. The theory was very difficult for me, since I have no experience with electronics outside the context of amateur radio.

However, I think that the difference between theory and code with respect to newcomers is that most people know how to study for a test, and have experience doing so. Almost everyone has taken some government exam or other, even if it is only the drivers' license written test. By contrast, many people are baffled by the code requirement and how to surmount it. The code-tape solution seems to be a grim and uninviting activity. By contrast, at least parts of the theory exam (the more relevent parts too, in my opinion!) are rather interesting to study. Not 100% hard slogging. Futhermore, the theory has the appearence, and at least partly the reality, of being relevant. Morse Code, invented before the turn of the century, if I'm not mistaken, flunks this test as well.

Well, that's a tough one.

A lot of people get a lot of pleasure from participating in nets. You can't say that nets are a bad thing if that is the way people want to enjoy ham radio, even though I personally do not enjoy nets, or participating in them.

I will confess that I do occasionally resent being asked to move off of a frequency, when I was there first, on the grounds that the frequency is a "net frequency." (Even though I generally accede to such requests). This happens a lot. In my opinion nets should assume that "their" frequency is plus or minus 5 or 10 Khz, in recognition of the fact that many hams are unaware of, or for that matter care to give deference to, a net's priority over a certain frequency.

Another problem with nets is that most of them seem to be in the general class band. I guess this means that general class hams are a lot more inconvenienced by nets than I am. This doesn't seem desireable or fair.

Personally I like to call CQ and ragchew. But not everyone feels that way. In fact, on 20M almost no one calls CQ anymore. I suspect this is a symptom of the greying of our HF ranks: most of the guys have settled into a comfortable routine and only talk to their existing friends. Kind of like 75 meters in many places.

And just as true, and relevant, today. I may grouse at the League (hey, that's one of the privileges of membership) but I am a member, and a supporter, and always will be. The League is our only true voice with the FCC. Every time I read some of the scary proposals regarding frequency allocations, I thank the stars that the League is there to guard our interests. And that's no fooling.

>>Nope, it's not the same thing. Squiggy is one person. 'Beepers' are anyone who uses CW, right ?<<

Wrong. 'Beepers' are those who refuse to accept and embrace modern technology, attempting to keep ham radio from advancing accordingly. 'Beepers' cling to the old ways, insisting that the Morse hazing ritual remain part of ham radio, regardless of the fact that there is no longer any justification for requiring knowledge of such outdated technology...thereby scaring away many would-be hams in the process and insuring the ultimate death of ham radio due to 'lack of interest.'

>And that is a problem for you how?

No problem for me if it's no problem for KC5WCP.

>And I don't remember asking your opinion or even valuing it.

That's because KC5WCP didn't ask for my opinion, so I suppose that
means his memory is OK. However, I didn't provide an opinion either.
It is equally acceptable to make a point by providing considered
opinions or by providing facts. This time I chose to state a fact.

Making a point is not the same thing as stating an opinion. But note
that the point may not be valid if it was based on an opinion that was
not well-considered. But this particular point was based on fact and
not opinion. Therefore it was valid. Capiche?

For "value", it is not a great concern of mine whether or not anyone
values the aforementioned fact. It's not 'my' fact. It simply is. But
for what it's worth, it's hard to "value" a signature on a document
that exists before the document is drafted.

Actually, the time period to renew a lapsed license and still retain the
call is one year. After one year, the commission will assign a new call
under the "sequential callsign system." However, under the vanity
program, one could retrieve the old call as a vanity call within that
second year.

:>Did the FCC think there might be some "buyer's remorse" among the vanity
:>applicants, or is this two-year rule just in keeping with their normal
:>practice?
:>

The two yer rule is (1) consistent with other FCC practice on availability
of calls, though under the old sequential call system old calls were never
re-used, and (2) was implemented in the "vanity" rules at the suggestion
of amateurs to prevent "trafficing" (the buying and selling) of vanity calls.

Without a significant amount of time between the abandonment of one call
and its reassignment to provide a real disincentive, trafficing in calls
could become a real problem.

5457. No Hole VHF/UHF antenna for 1997 Jeep Grand Cherokee?

Newsgroup: rec.radio.amateur.misc
Date: 1996-12-31 00:00:00 UTC
From: "R.W. Odell" <rodell@atl.com>
Message-ID: <32C99326.41C67EA6@atl.com>
Source record: 208348

Does anyone have any great ideas for this vehicle? I've mounted a Kenwood TM941, and am interested in placing an antenna which will at least give me two of my three favorite bands.

There's the on-glass possibility, or one of these all-way adjustables on the hatch.

Anyone have any other ideas?

-Bob

The full name is "Squigford". "Squiggy" is just a nickname.

The ability to beep does not assign any privileges to usenet, but it
is an interesting thought! ;)

Granted. But why does the filter have to be CW. Why can't it be a
stringent written test which emphasises operating practices and
theory?

5461. Repeaters in San Fran/San Jose Area?

Which is why there should be a CW transmitter test portion if there is
going to be a Morse code requirement.

Actually you were not stating fact. i do not have to see the actual
text of the item involved to desire to be a signator. The general idea
behind the article is what I am interested in and therefore desire to

be a signator.

Bomar
800-526-3935
$15 per crystal for 1 week service
$10 per crystal for 2-3 week service
(I just ordered a few crystals about 3 weeks ago and received them last
week. Not bad considering I asked for UPS ground service and their in NJ
and I'm in Seattle!! They are getting them out the door in 2 weeks at only
10 bucks- not bad. And yes, the crystals are good- I installed them last
night...)

Marden Electronics
800-222-6093
$17.50 per crystal for 1 week service
$15.50 per crystal for 2 week service
$12.50 per crystal for 4 week service

And there are others, but these are companies I have used a lot in the last
year.

-snip-

Amateur radio is many things but above all a learning experience. I imagine very few hams (code or no-code) could pass all the written elements for the advanced or extra class ticket. There are a good number of hams who are not professionals in a field closely-related to our hobby. The novice, techs and general tickets are steps for those who wish to improve their technical knowledge and skills. Increased spectrum privileges are supposed to be an incentive to learn, not that they really appear to have done that much good.

Requiring that an entry-level ham be able to pass today's advanced class exam (see note below) will limit the growth of amateur radio more than the code speed requirement ever did. With no grandfathering every ham with less than an advanced ticket would have to be re-tested. What percentage of those hams would be able to remain hams with a year's notice? Fifty, sixty per cent perhaps?

Besides eliminating the SKs and inactives (not a bad thing), a good number of hams will not be able to pass this new exam. Why, I don't know. Some just won't make the effort, some won't have the time and some just will have a hard time learning it. Losing just 25% of the amateurs who hold novice, tech and general tickets could be the death knell of the hobby.

No matter what losses are incurred in number of "qualified" hams what happens to the flow of new blood. How many potential hams who are not professionals in a closely related field will be turned away. The no-code VHF ticket flood will be turned into a trickle, the amateur spectrum becomes the professional's playground.

Diversity within the ranks of our hobby will disappear as it becomes the playground of the technical professional. Anyone with the desire to learn but without the prerequesite knowledge is pretty much SOL. No clubs will be able to offer classes. I wouldn't want to guess at how long it would take just to explain all the material once without questions (elements 2 - 4A). If anyone wants to hazard a guess at how many hours, I'd love to hear it. I am guessing that it couldn't be covered in a course lasting a college semester with questions and explanations.

Some sort of entry-level class is needed irregardless of code/no-code. Making entry into our hobby too difficult for those without a technical background serves little if any purpose.

73 de n4jvp
Fritz

Note : I am assuming that the restricted class ticket will be in the ball park of today's advanced class. Those who favor just two license classes generally speak of today's advanced exam as the threshold of entry.

'smatter bunky, upset because you lack creativity to make your own web
page?

Yeah, I had an idea about the chick, too. That's a little scary. Great
page, keep modifying it!!

Mark SCHNEIDER -- Trying to figure out what to do with all these
German traits.....hmmmmm, maybe if we just march this group of
neo-nazis and Skinheads into this little sealable room over here,
close the door, climb this ladder over here, and dump these pellets
down this pipe.........
